

| Classification    | Compound                    | Elution time<br>(min) | Primary Mass Peak<br>(m/z) |
|-------------------|-----------------------------|-----------------------|----------------------------|
| S+C <sub>3</sub>  | Methoxyeugenol              | 25.9                  | 194                        |
| S+C <sub>2</sub>  | 4-ethyl-2,6-dimethoxyphenol | 23.1                  | 137                        |
| S+C <sub>2</sub>  | 3,4-Dimethoxystyrene        | 20.9                  | 164                        |
| S+C <sub>1</sub>  | 2,3-Dimethoxytoluene        | 17.6                  | 152                        |
| S+C <sub>1</sub>  | 2,5-dimethoxy-toluene       | 18.4                  | 137                        |
| G+C <sub>3</sub>  | Dihydromethyleugenol        | 23.6                  | 151                        |
| G+C <sub>3</sub>  | Propiovanillione            | 24.7                  | 151                        |
| G+C <sub>3</sub>  | Guaicylacetone              | 24.2                  | 137                        |
| G+C <sub>3</sub>  | <i>p</i> -Propylguaiacol    | 20.1                  | 137                        |
| G+C <sub>3</sub>  | Isoeugenol                  | 21.0                  | 164                        |
| G+C <sub>2</sub>  | Acetovanillone              | 23.5                  | 151                        |
| G+C <sub>2</sub>  | 4-Vinylguaiacol             | 19.7                  | 135                        |
| G+C <sub>2</sub>  | 4-Ethylguaiacol             | 18.9                  | 137                        |
| G+C <sub>1</sub>  | 2-methoxy-4-methyl-phenol   | 17.3                  | 138                        |
| G+C <sub>1</sub>  | Vanillin                    | 22.3                  | 151                        |
| G+C <sub>1</sub>  | 2-Methoxy-6-methylphenol    | 16.8                  | 123                        |
| G+C <sub>1</sub>  | 3-methoxy-5-methyl-phenol   | 17.3                  | 123                        |
| Guaiacol          | Guaiacol                    | 15.5                  | 124                        |
| Ph+C <sub>2</sub> | 3-ethyl-phenol              | 18.1                  | 107                        |
| Ph+C <sub>2</sub> | <i>p</i> -Xylenol           | 14.7                  | 122                        |
| Ph+C <sub>1</sub> | <i>p</i> -Cresol            | 16.6                  | 107                        |
| Ph+C <sub>1</sub> | <i>o</i> -Cresol            | 15.9                  | 108                        |
| Phenol            | Phenol                      | 15.0                  | 94                         |

**Supplemental Table S1:** Identification and classification of pyrolytic products obtained via Pyrolysis GC/MS.

**Supplemental Figure S1:** Representative  ${}^1\text{H}$  NMR spectra of acetylated lignin fractions showing identification of typical structures in lignins as well as aliphatic protons that might be found in softwood extractives.

**Supplemental Figure S2:** Representative quantitative  $^{13}\text{C}$  NMR spectra of a typical lignin fraction identifying the  $\text{C}_\gamma$  in a  $\beta$ -O-4 bond and a methoxyl group used to determine the lignin  $\beta$ -O-4 content (Fig. 3B).
