<b>65</b> <sup>128</sup>	9	no		+		FE	U <sup>m</sup> SmC <sub>s</sub> P <sub>F</sub>
<b>85</b> <sup>120b</sup> (Fig. 46)	10–18	yes	+	-	-	no	B7
<b>86</b> <sup>120c</sup> (Fig. 47)	12–18	no	-	-	+	FE/ AF <sup>c</sup>	SmCP <sub>FE/AF</sub> (B7 <sup>l</sup> )
<b>87</b> <sup>120d</sup> (Fig. 48)	10–14	yes	+	-	-	no	B7
<b>87</b> <sup>120d</sup> (Fig. 48)	16–20	yes	+	-	-	no, AF	B7, B7P <sub>AF</sub>
<b>88</b> <sup>120d</sup>	9–18	yes	+	-	-	no	B7
<b>89</b> <sup>120b</sup>	9–18	yes	+	-	-	no	B7
<b>90</b> <sup>120c</sup>	11–18	no	-	-	+	FE/ AF <sup>c</sup>	SmCP <sub>FE/AF</sub> (B7 <sup>l</sup> )
<b>91</b> <sup>200</sup>	12–18	no	+	-	-	?	USmCP (B7 <sup>l</sup> )
<b>92</b> <sup>128</sup>	10* <sup>f</sup>	no		+		FE	U <sup>m</sup> SmC <sub>s</sub> P <sub>F</sub>
<b>93</b> <sup>128</sup>	10	no		+		?	U <sup>m</sup> SmC <sub>s</sub> P <sub>F</sub>

<sup>a</sup> The range given does not necessarily mean that all homologues were synthesised or investigated; <sup>b</sup> abbreviations: P<sub>AF/FE</sub> indicate that an AF or FE switching behaviour is observed for this mesophase, whereas P<sub>A/F</sub> indicates a AF or FE phase structure in the ground state, (B7–lk = B7–like textural features (helical filaments, etc.) can be observed, U<sup>m</sup>SmC<sub>s</sub>P<sub>F</sub> = modulated–undulated SmC<sub>s</sub>P<sub>F</sub> phase, [\*] indicates a dark conglomerate mesophase; <sup>c</sup> SmCG structure was proposed first<sup>72c</sup>; <sup>d</sup> occurs upon cooling from a SmCPA<sup>[\*]</sup> phase, therefore the typical helical filaments of the natural B7–type phases cannot be observed; <sup>e</sup> depending on the applied voltage; <sup>f</sup> branched chain, see formula; <sup>g</sup> no data given
