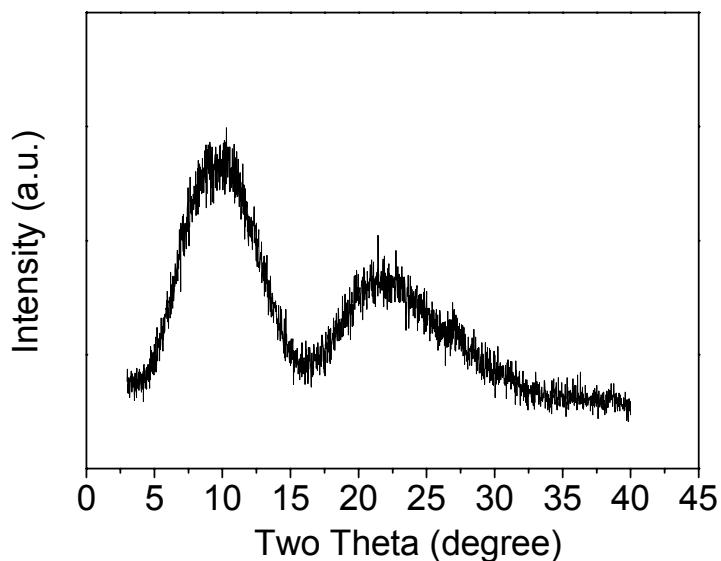

Fig. S1. XRD pattern of the sample synthesized by sol-gel transformation of **1**.

Note: For the synthesis of this control sample, compound **1** was placed in a vessel covered by parafilm with small pinholes. Compound **1** slowly hydrolyzed and solidified at ambient temperature and humidity. A transparent gel was obtained. Before the XRD measurement, the gel was crushed into fine powders.

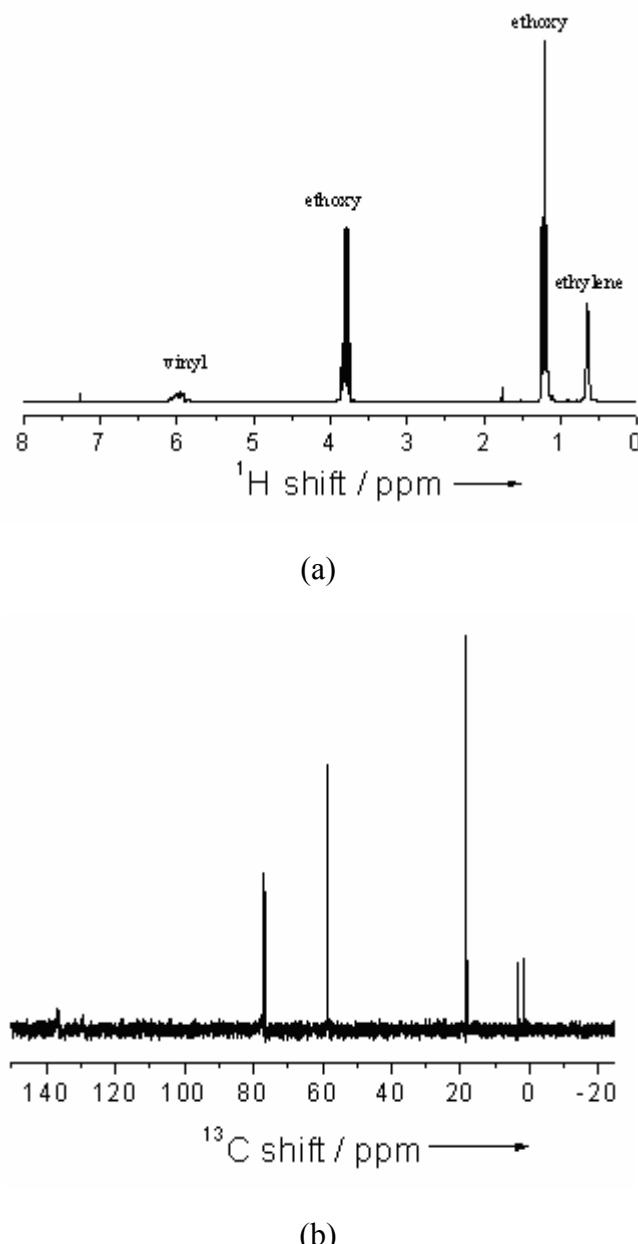

Fig. S2. (a) ^1H and (b) ^{13}C NMR spectra of compound 1.
