## Synthesis of the oligothiophene dicarboxylates

[2,2']-bithiophene-5,5'dicarboxylic acid and [2,2';5',2''] terthiophene-5,5''dicarboxylic acid were prepared following the procedure reported by Kagan et al.<sup>1</sup> 2,2':5',2'':5'',2'''-Quaterthiophene-5,5'''-dicarboxylate, was obtained following the protocol described below.

**Preparation of diethyl 2,2':5',2'':5'',2'''-Quaterthiophene-5,5'''-dicarboxylate.** 3.3 g of 5,5'-bis(trimethylstannyl)-2,2'-bithiophene (0.0067 mol) were added, under argon atmosphere, to a solution of 4.4 g of ethyl 5-bromothiophene-2-carboxylate (0.0187 mol) in DMF (100 ml) in a three-neck, round-bottomed flask containing 5% of dichlorobis(triphenylphosphine) palladium(II) as catalyst. The reaction mixture was stirred for 15 minutes at room temperature under nitrogen atmosphere, and then heated at 90 °C overnight. The solvent was evaporated under vacuum and the residue was washed with acetone (2 x 100 ml) and filtered. Pure, red powder of 2.2. g of were obtained (70 %), mp > 260 °C.

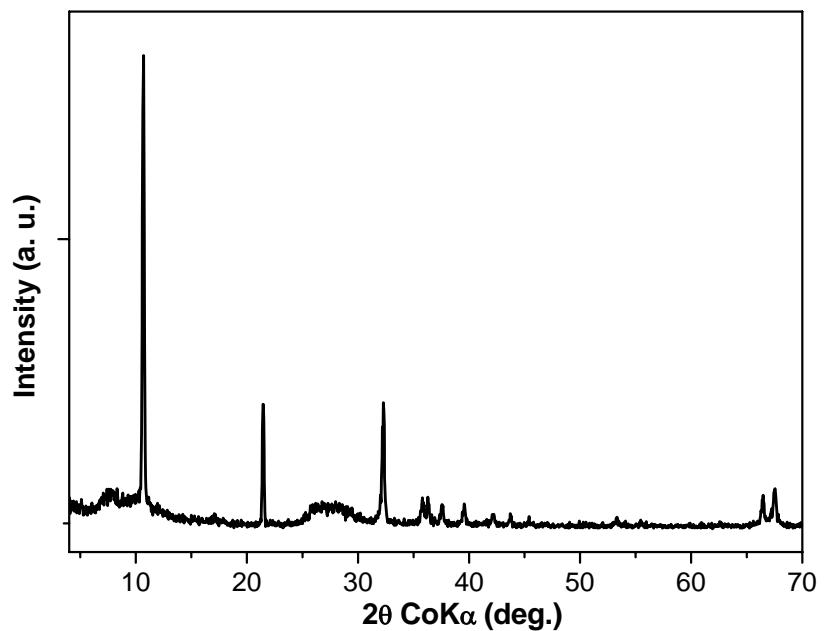

### Preparation of 2,2':5',2'':5'',2'''-Quaterthiophene-5,5'''-dicarboxylate.

2.2 g of diethyl quaterthiophene dicarboxylic were added to a solution of 25 g of NaOH in a mixture of ethanol water (250-100 ml). The mixture was refluxed for 4h. The red powder obtained was filtered washed with water, methanol, ether, chloroform (1.9 g).

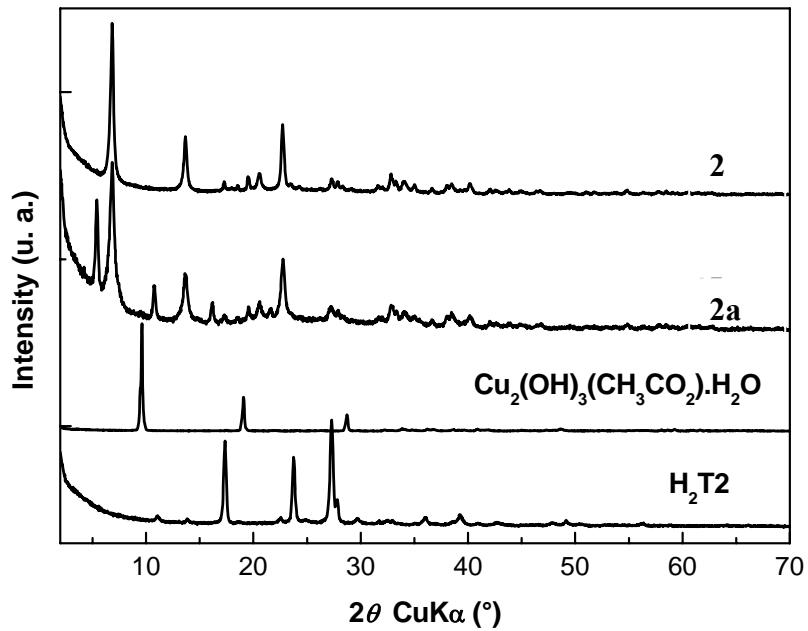

<sup>1</sup> H NMR spectrum (200 MHz, DMSO-D<sub>2</sub>O (2:1)): δ 6.39, 7.31 (d,  $J= 3.4$  Hz, 1H, H<sub>4'',3''</sub>), 7.22 (s, 2H, H<sub>3'',4''</sub>), 7.15 (d,  $J= 3.4$  Hz, 1H, H<sub>3'',4''</sub>). calc.: C 52.5, H 2.81, O 31.7, S 29.30 % found: C 51.66, H 2.41, O 15.29, S 30.65.
