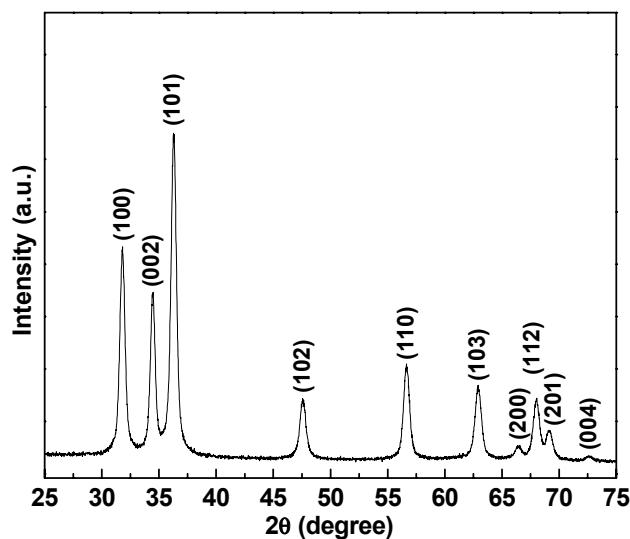

Fig. S1. XRD pattern of ZnO nanoassemblies.

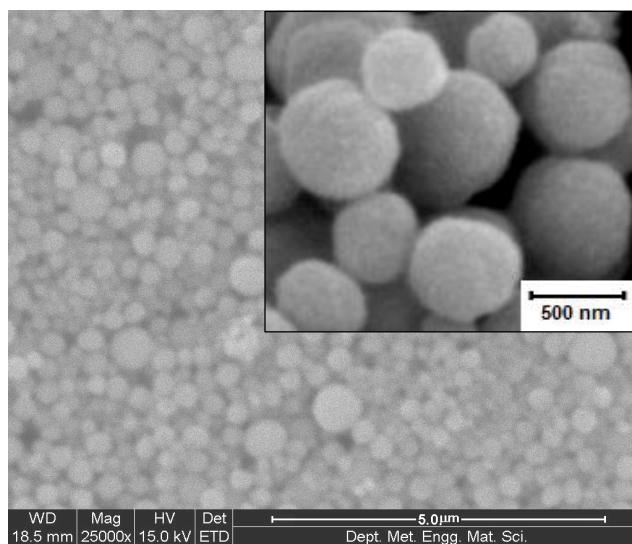

Fig. S2. Large scale SEM micrograph of ZnO nanoassemblies (inset clearly shows that nanoassemblies are comprised of numerous fine nanocrystals).

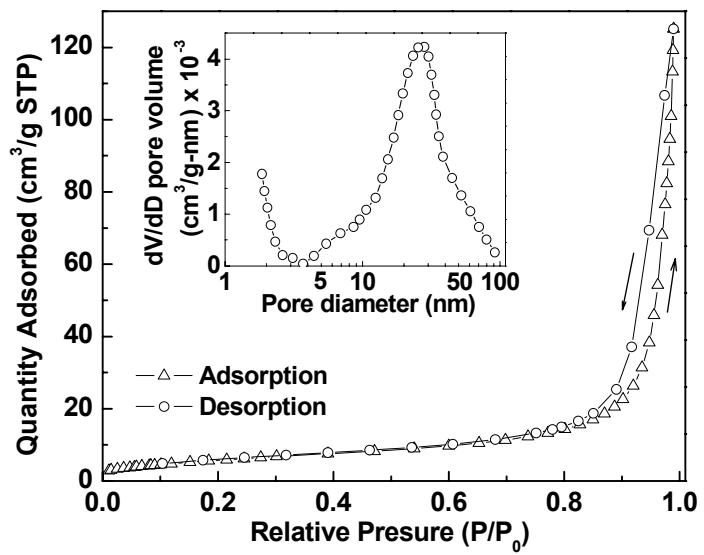

Fig. S3.  $N_2$  adsorption-desorption isotherm of ZnO nanoassemblies (inset shows its BJH desorption  $dV/dD$  pore volume vs. pore diameter curve).

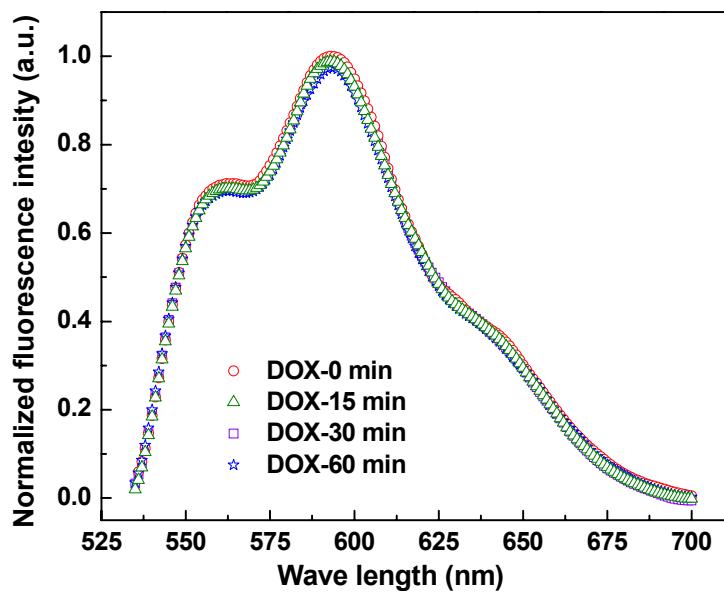

Fig. S4. Fluorescence spectra of pure DOX (10  $\mu\text{g}/\text{ml}$ ) at different interval of time (self-quenching of DOX is not observed during experiment, i.e. loading of DOX into ZnO nanoassemblies).

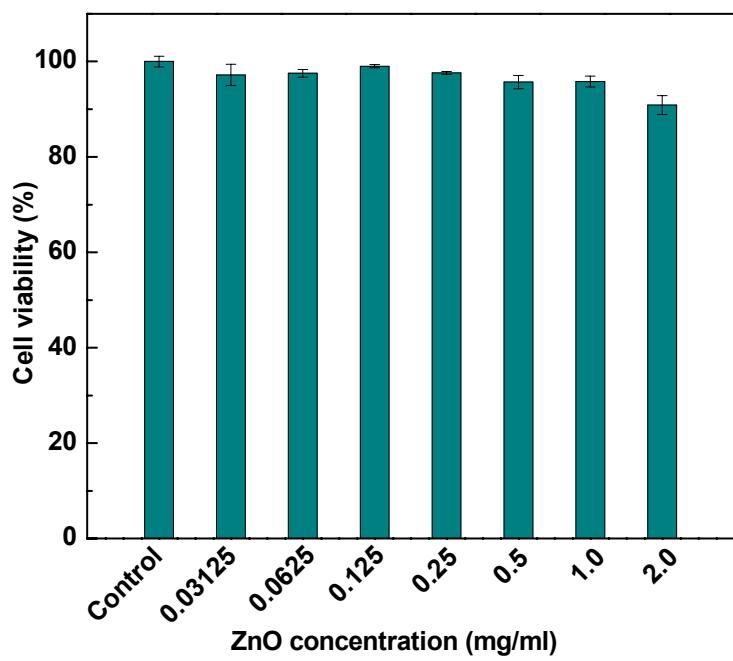

Fig. S5. Percentage viability of HeLa cells after 24 h incubation of ZnO nanoassemblies (control: viability of HeLa cells without ZnO nanoassemblies). The results are shown as mean  $\pm$  standard deviation ( $n = 4$ ).

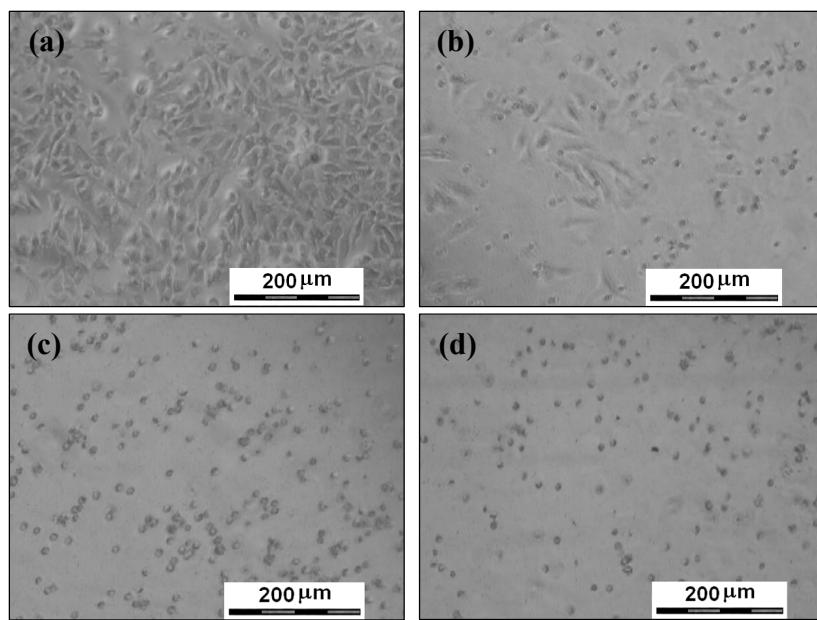

Fig. S6. Representative photographs of HeLa cells for (a) 0.0  $\mu$ M DOX (control), (b) 0.125  $\mu$ M of DOX, (c) 1.0  $\mu$ M of DOX and (c) 2.0  $\mu$ M of DOX in DOX loaded ZnO.

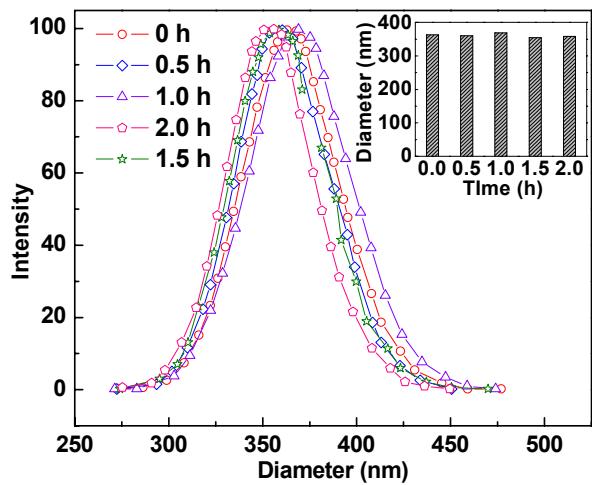

Fig. S7. DLS measurements showing the hydrodynamic diameter of ZnO colloids. Inset shows the corresponding column plot.
