

ELECTRONIC SUPPORTING INFORMATION

Uniform Fluorescent Photonic Crystal Supraballs Generated from Nanocrystals Loaded Hydrogel Microspheres

Ziyi Yu, Li Chen, Su Chen*

State Key Laboratory of Material-Oriented Chemical Engineering and College of Chemistry and Chemical Engineering, Nanjing University of Technology, No. 5 Xin Mofan Rd., Nanjing, Jiangsu 210009 (P.R. China)

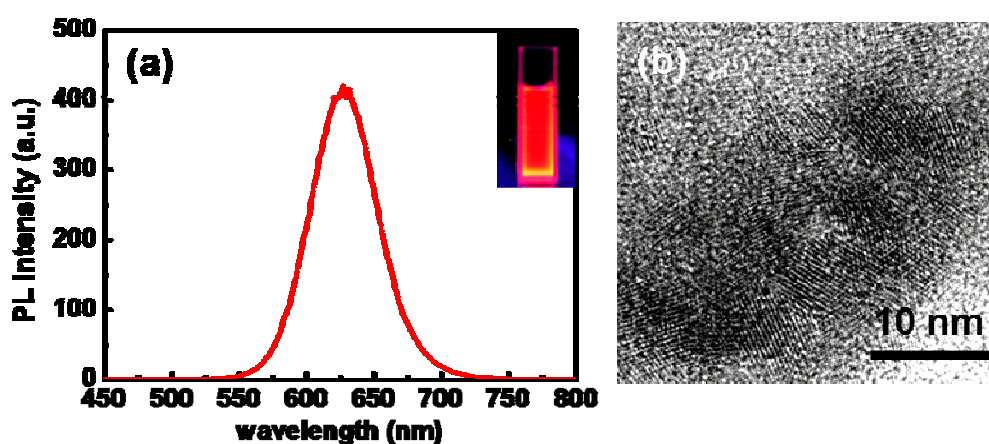

Fig. S1. (a) Photoluminescence emission spectra and fluorescence images of CdTe NCs. (b) High-resolution TEM image of CdTe NCs.

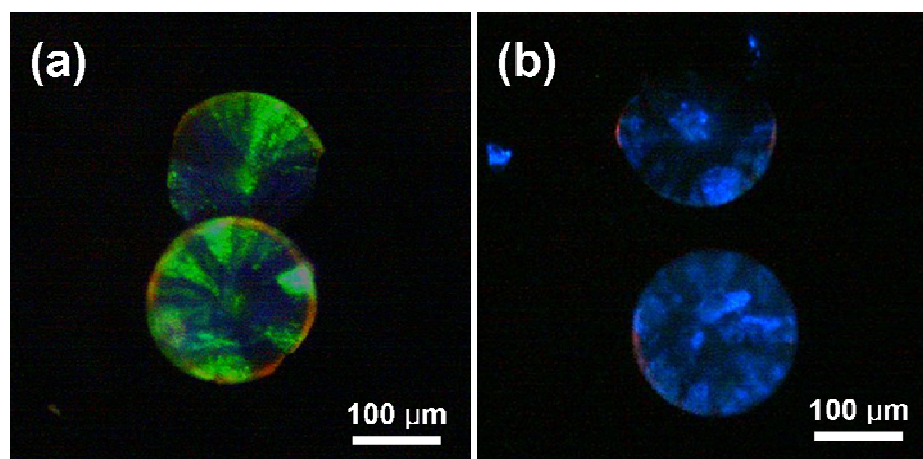

Fig. S2. Cross-sectional optical microscopy images of fluorescent PC supraballs. The cross-section of supraballs exhibit brilliant color of green and blue when they are assembly formed by hybrid microspheres of two different diameters, 230, and 190 nm, respectively.
