

**Electronic Supplementary Information**

Mussel-inspired functionalization of carbon nanotubes for hydroxyapatite mineralization

*Minah Lee, Sook Hee Ku, Jungki Ryu, and Chan Beum Park*<sup>\*</sup>

**Figure S1.** An enlarged SEM image of HAp mineralized with CNT-PDA for 7 days. HAp agglomerates were highly intercalated with a network of CNT-PDA nanofibers.

**Figure S2.** An enlarged SEM image of HAp mineralized with CNT-PDA for 7 days. HAp minerals were successfully developed with an intercalating CNT-PDA network, as indicated with black arrows.
