Calculated vibrational frequencies

Here, we provide a list of the calculated vibrational frequencies that have been used to calculate diffusion rates using Equations 9 and 10 in the original manuscript. For the heavy adsorbates Pt, Hf and Y, only the adsorbate itself is displaced and therefore, three frequencies are obtained. For the light adsorbates Al and O, also atoms in the vicinity are displaced. For Al and O, we include all atoms within a 5 Å radius of the transition state.
