1. Synthesis:

Compounds **3** and **4** were synthesized according to the literature methods¹ and benzene 1,4-diboronic acid (BDBA) was purchased from Aldrich.

Exact procedure for synthesis of *p*-PPF and *m*-PPF. A mixture of tribromo derivative (0.46 mmol) and 1,4-benzene diboronic acid (0.92 mmol) in DMF (20 mL) was degassed by four freeze-pump-thaw cycles. To this mixture 2M K₂CO₃ in water (4 mL) and tetrakis(triphenylphosphine)-palladium(0) (70 mg, 60.6 µmol) were added followed by degassing by four freeze-pump-thaw cycles. After that the resultant mixture was purged with Ar and stirred at 150 °C in a schlenk flask for 36 h. After cooling to room temperature the mixture was poured into water and filtered. The precipitate was washed with methanol, dichloromethane and dried in vacuum. The precipitate was further purified by soxhlet extractions with water, methanol, dichloromethane and tetrahydrofuran for 12 h each.

p-PPF: Grey solid (250 mg). Solid-state ^{13}C NMR (δ ; ppm): 138.8, 130.3, 126.2 ppm. FT-IR (ν ; cm^{-1}): 3408, 3055, 3023, 1590, 1481, 1381, 1117, 1010, 869, 837, 786, 699. Elemental Analysis (%) Calcd. For $\text{C}_{42}\text{H}_{26}$: C 95.09, H 4.91; Found: C, 85.62; H, 4.14.

m-PPF: Grey solid (260 mg). Solid-state ^{13}C NMR (δ ; ppm): 145.4, 131.6 ppm. FT-IR (ν ; cm^{-1}): 3417, 3053, 3027, 1592, 1472, 1379, 1121, 1010, 875, 835, 782, 701. Elemental Analysis (%) Calcd. For $\text{C}_{42}\text{H}_{26}$: C 95.09, H 4.91; Found: C, 85.72; H, 4.24.
