

Fe₃O₄/Chitosan Nanocomposite for Magnetic Drug Targeting to Cancer

José L. Arias, L. Harivardhan Reddy, Patrick Couvreur

Supplementary Fig. 1 Microscope photograph, magnification 20X, of the Prussian blue staining test of tumors obtained from mice treated with Fe₃O₄/chitosan nanocomposites with an extracorporeal magnetic gradient (1.1 T for 2 h after injection) (5 mg/Kg equivalent of gemcitabine).
