

Electronic Supplementary Information (ESI) for Journal of Materials Chemistry

**A general route to nanostructured  $M[V_3O_8]$  and  $M_x[V_6O_{16}]$  ( $x = 1$  and  $2$ ) and their first evaluation for building enzymatic third generation biosensors.<sup>†</sup>**

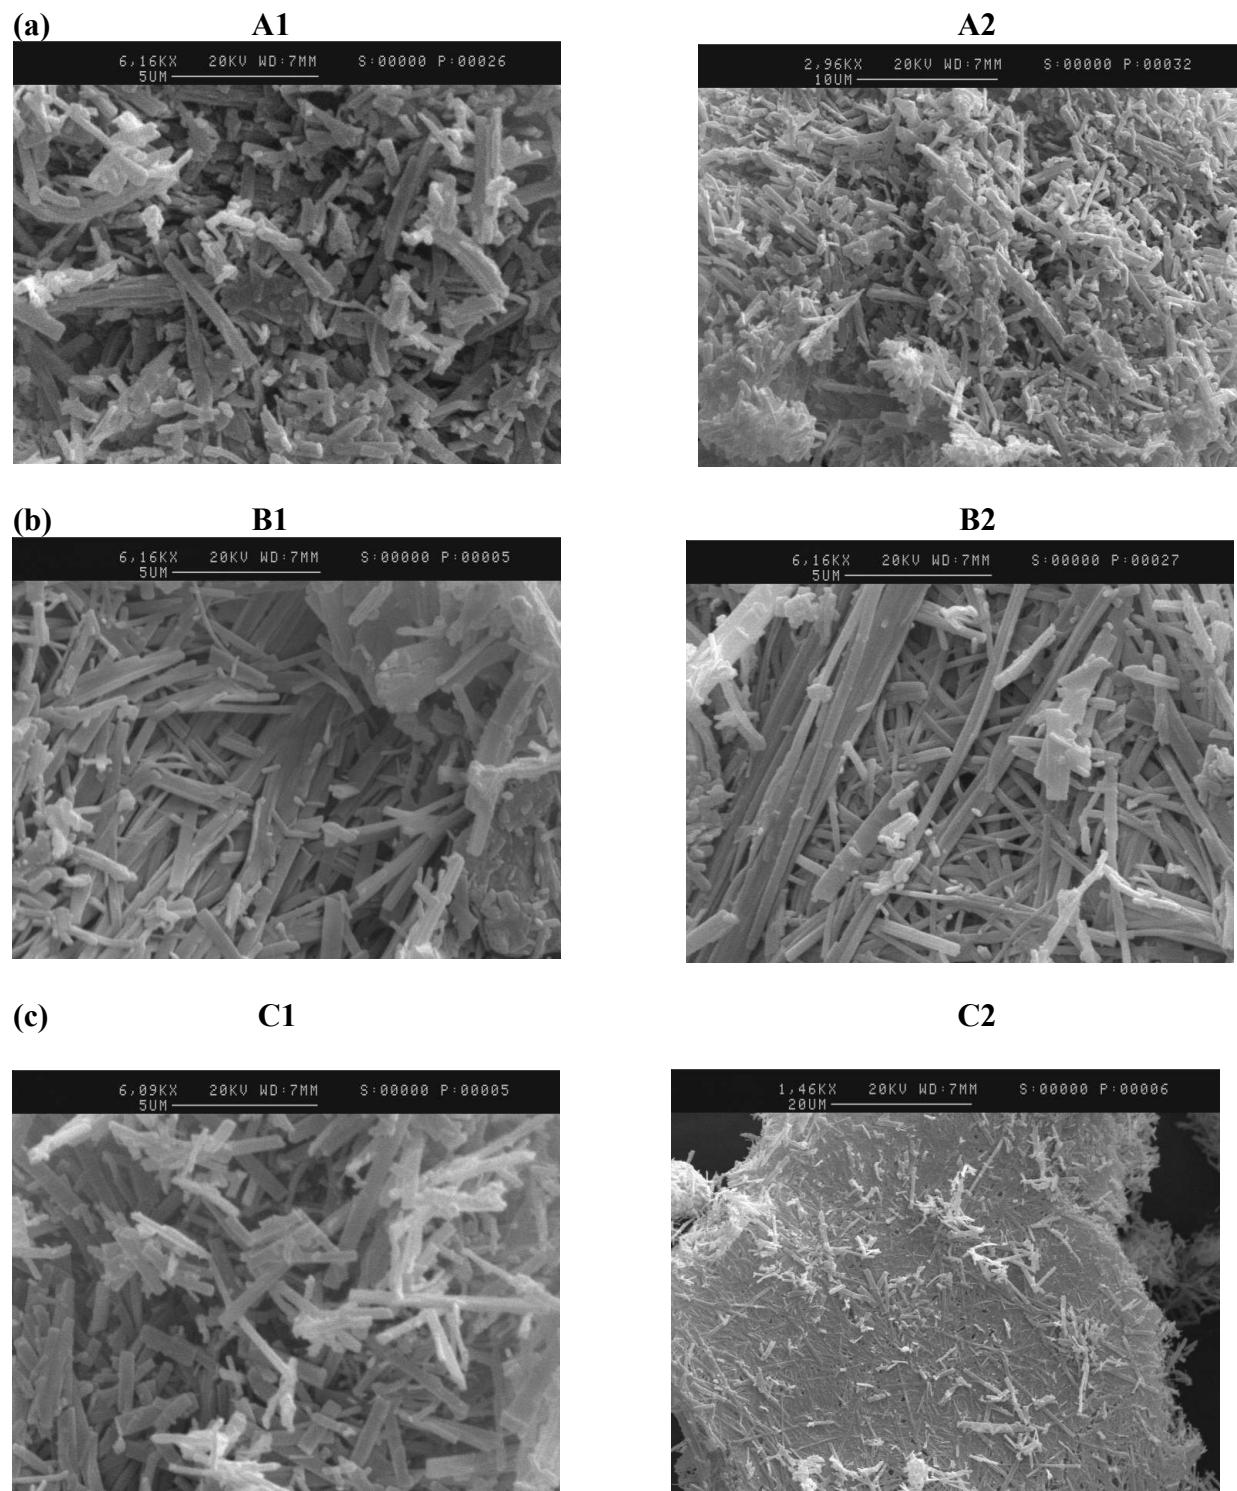

Nathalie Steunou,<sup>\* a,b</sup> Christine Mousty,<sup>c</sup> Olivier Durupthy,<sup>a</sup> Cécile Roux,<sup>a</sup> Guillaume Laurent,<sup>a</sup> Corine Simonnet-Jégat,<sup>b</sup> Jacky Vigneron,<sup>b</sup> Arnaud Etcheberry,<sup>b</sup> Christian Bonhomme,<sup>a</sup> Jacques Livage,<sup>a</sup> and Thibaud Coradin.<sup>a</sup>

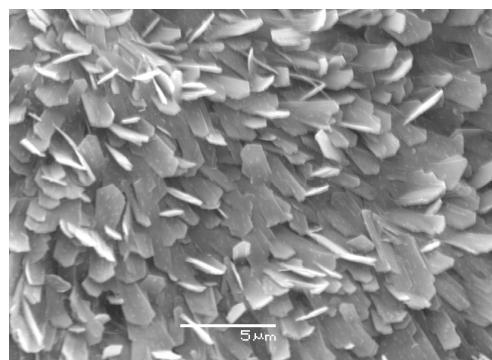

**Fig. S1: X-ray diffraction patterns of  $M[V_3O_8]$  and  $M_x[V_6O_{16}]$  phases. In the title of figures VM-X-Y, M corresponds to the cation, X to the pH value and Y to the ageing time.**

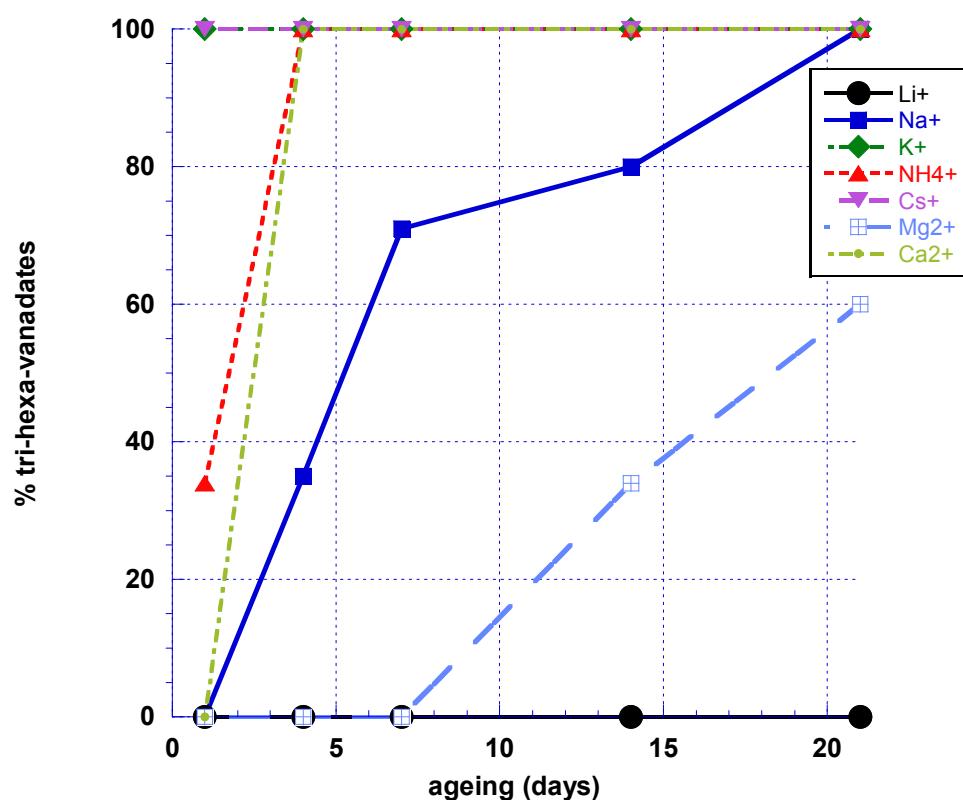

**Fig. S1: X-ray diffraction patterns of M[V<sub>3</sub>O<sub>8</sub>] and M[V<sub>6</sub>O<sub>16</sub>] phases. In the title of figures VM-X-Y, M corresponds to the cation, X to the pH value and Y to the ageing time.**

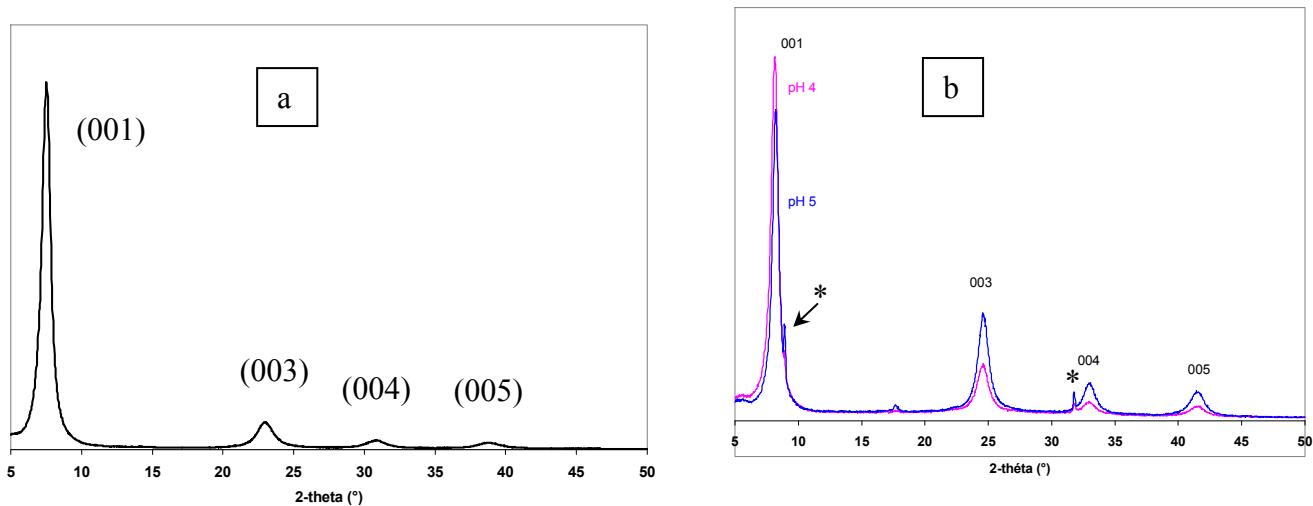

**Fig. S2:** SEM images for (a)  $\text{Mg}[\text{V}_6\text{O}_{16}]7.1\text{H}_2\text{O}$  (images A1 and A2,  $\text{pH}_i = 2, 4$  days); (b)  $\text{Ca}[\text{V}_6\text{O}_{16}] 9.7\text{H}_2\text{O}$  (image B1  $\text{pH}_i=2, 7$  days) (image B2  $\text{pH}_i=3, 14$  days) ; (c)  $\text{Ba}_{1.2}[\text{V}_6\text{O}_{16}]5.5\text{H}_2\text{O}$  (images C1 and C2,  $\text{pH}_i = 2, 14$  days)

**Fig S3.** SEM images of  $\text{K}_2[\text{V}_6\text{O}_{16}]$ -GOx biomembrane prepared by adsorption.

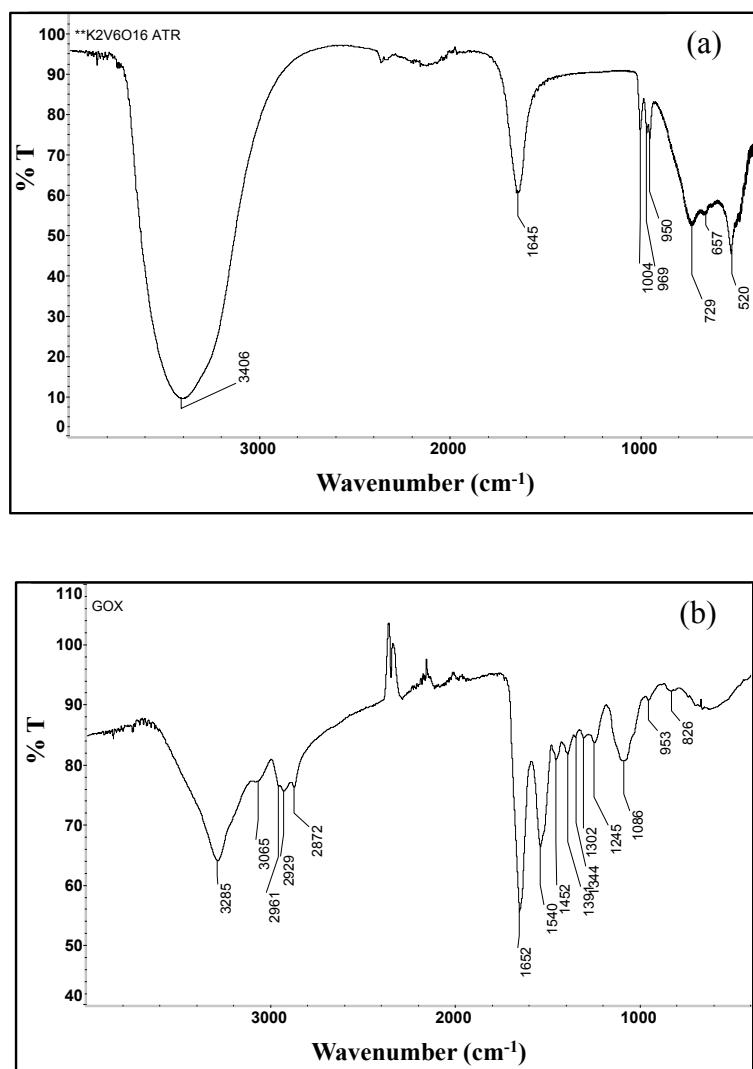

**Fig S4:** Relative amount of tri- and hexavanadates (i. e.  $m(\text{MV}_3\text{O}_8)/(m(\text{MV}_3\text{O}_8)+m(\text{V}_2\text{O}_5))$ ) versus ageing at pH 2 for different monovalent and bivalent cations. The relative amount of  $\text{Ba}_{1.2}[\text{V}_6\text{O}_{16}]$  is not reported because of the concomitant presence of  $3\text{Ba}[\text{V}_{10}\text{O}_{28}]21\text{H}_2\text{O}$  in a significant amount.

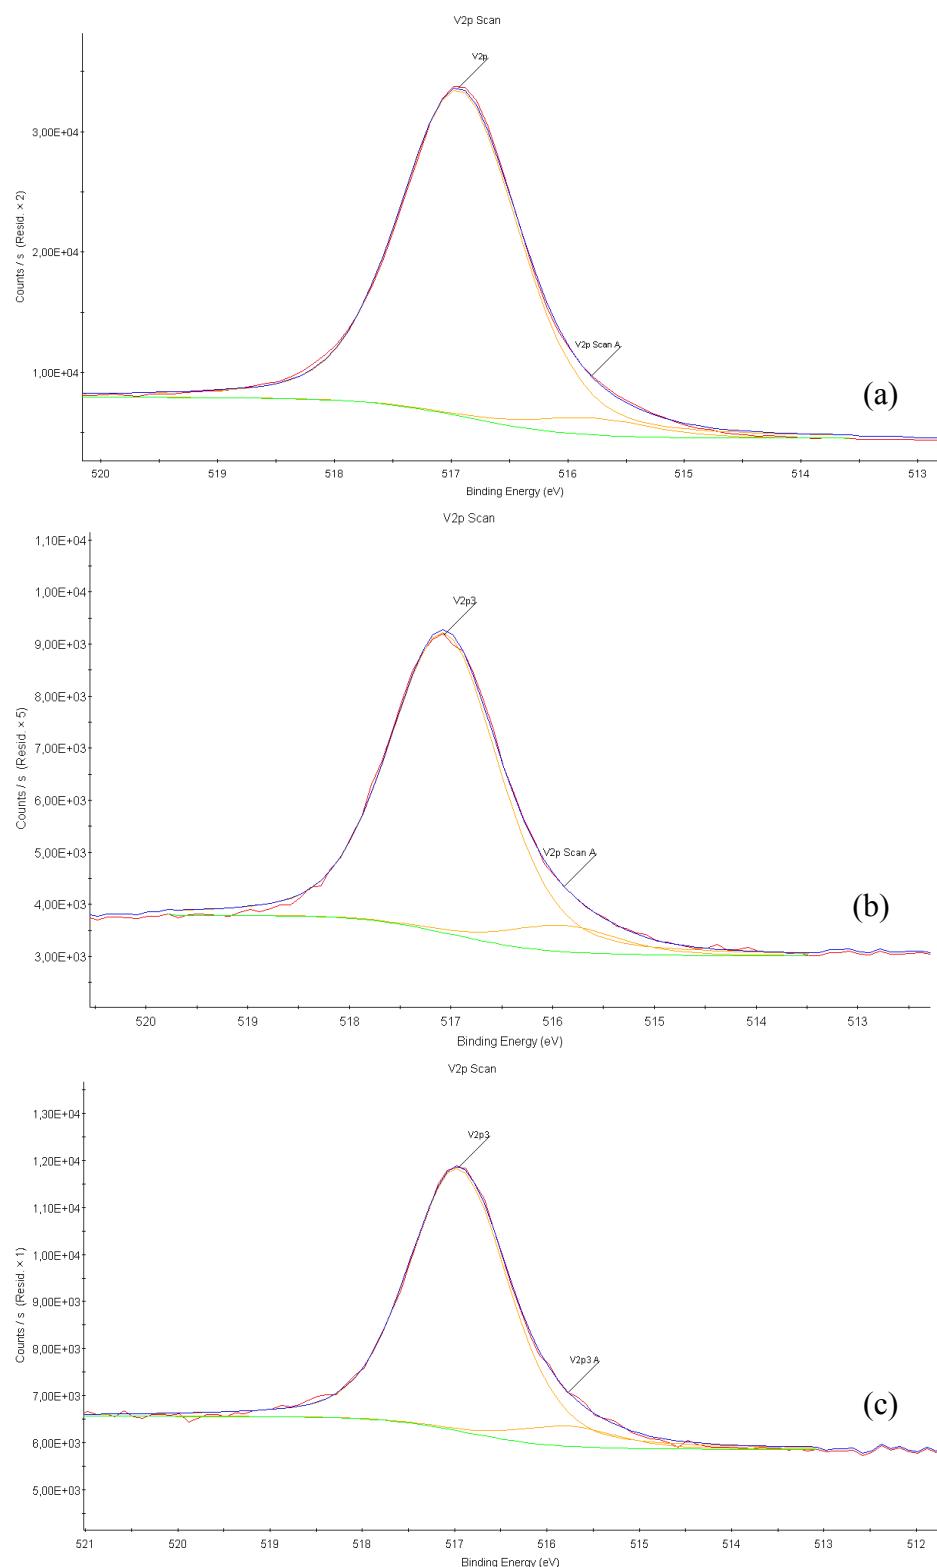

**Fig. S5.** XRD pattern of (a)  $\text{V}_2\text{O}_5\text{-nH}_2\text{O}$  gel at pH 1, (b)  $\text{V}_2\text{O}_5\text{-nH}_2\text{O}$  gel at pH 4 and 5.

For these experiments,  $\text{V}_2\text{O}_5\text{-nH}_2\text{O}$  gels are deposited on glass substrates and the resulting films are immersed in acetate buffers of pH between 3 and 5. Due to the preferential orientation of  $\text{V}_2\text{O}_5$  ribbon particles on flat surfaces, the XRD pattern of  $\text{V}_2\text{O}_5\text{-nH}_2\text{O}$  gels at pH between 1 and 5 display only the series of 00 $\ell$  reflections. The XRD diagrams of  $\text{V}_2\text{O}_5\text{-nH}_2\text{O}$  gels at  $3 < \text{pH} < 5$  indicate that the structure of the gels is preserved until pH 5 despite of a little difference in the  $d_{001}$  value indicating a slight modification of the interlamellar space and the presence of an impurity of small amount at pH 5 (\*).

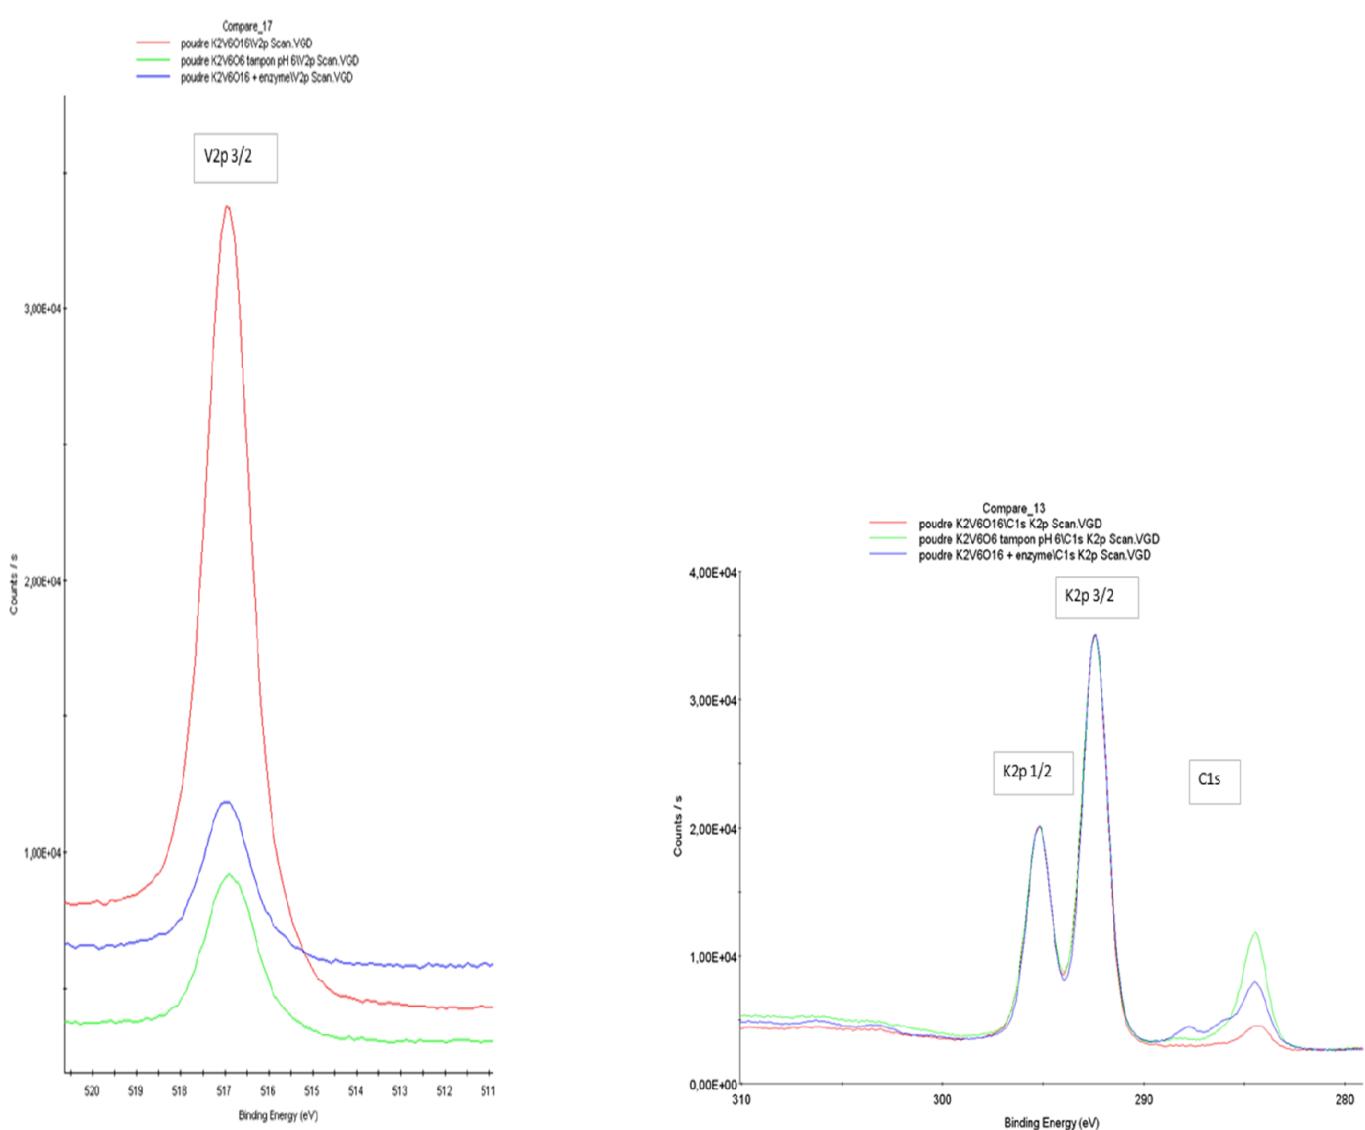

The XRD pattern of  $\text{V}_2\text{O}_5$  sol at pH 5 and  $\text{V}_2\text{O}_5\text{-nH}_2\text{O-GOx}$  biomembranes do not display XRD reflections. Actually, by redispersion of the gel in aqueous solution, the resulting  $\text{V}_2\text{O}_5$  sol is then deposited on the glass substrate and dried. The stacking of  $\text{V}_2\text{O}_5$  particles is not anymore present in the dried  $\text{V}_2\text{O}_5$  film and the particles are completely disorganized. Since  $\text{V}_2\text{O}_5\text{-GOx}$  biomembrane results from the adsorption of enzyme onto these  $\text{V}_2\text{O}_5$  films, no XRD reflections are present in the pattern of the  $\text{V}_2\text{O}_5\text{-nH}_2\text{O-GOx}$  biomembranes.

**Fig. S6.** Representative FT-IR spectra of pure a)  $\text{K}_2[\text{V}_6\text{O}_{16}]\cdot\text{nH}_2\text{O}$  and b) GOx samples.

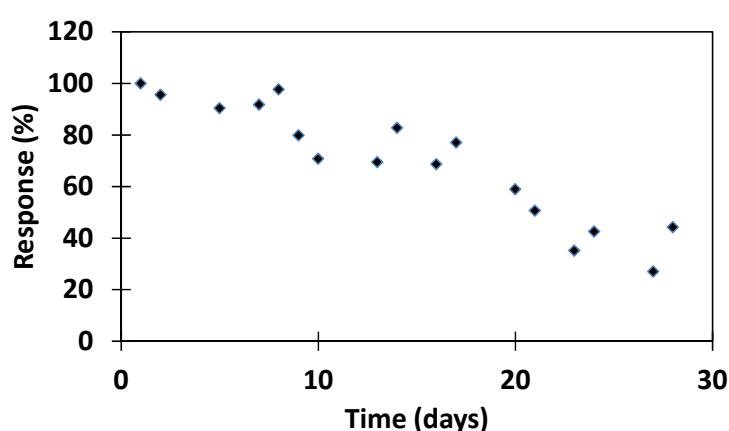

**Fig. S7.** V2p3/2 XPS spectra of a) K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]- pH 3, b) K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]- pH 6 c) K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]- GO<sub>x</sub><sub>cos</sub>

**Fig. S8.** Comparison of a) the V2p , b) K2p and C1s XPS spectra for K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-pH 3, K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-pH 6 and K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-GOx<sub>cos</sub>

**Table S1.** V2p 3/2 peak positions and atomic ratio for K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-pH 3, K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-pH 6) and K<sub>2</sub>[V<sub>6</sub>O<sub>16</sub>]-GOx<sub>cos</sub>

sample	Positions (eV)	Assignment	FWHM (eV)	Area (P) CPS.eV	%	[V <sup>5+</sup> ]/[V <sup>4+</sup> ]
