

## Supporting information

### Three-Dimensional Nanohybrids of $\text{Mn}_3\text{O}_4$ /Ordered Mesoporous Carbons for High Performance Anode Materials for Lithium-Ion Batteries

Figure S1. Thermogravimetric analysis (TGA) indicates that the weight content of  $\text{Mn}_3\text{O}_4$  in the  $\text{Mn}_3\text{O}_4$ /OMC hybrid is 20.3 wt.%.
