

Supplementary Figure 1. Fabrication process and photographs of (a) magnetic plastic chip, (b) PLGA film and (c) the magnetic chip bonding to an enzyme-immobilized glass slide via a PLGA film.

Supplementary Figure 2. An example of the time course of the power density of a single biofuel cell and tri-cells without the magnetic covers. The cell was working in the presence and absence of 50 mM glucose and/or 5 mM  $\text{NAD}^+$ . The power is generated only in the presence of both glucose and  $\text{NAD}^+$ . Inset is the time course of the power of a single biofuel cell and tri-cells without the magnetic covers.
