

Supporting information

Visualizing the spatial distribution of secondary metabolites produced by marine
cyanobacteria and sponges via MALDI-TOF imaging.

Eduardo Esquenazi, Cameron Coates, Luke Simmons, David Gonzalez, William
H. Gerwick and Pieter C. Dorrestein

Fig. S1. Localizations of all identified ions in the *Dysidea* section by npMALDI-I. Designated colors are arbitrary. And used to show the variety of differential localizations and co-localizations for 47 different ions extracted from the final average spectrum in Fig. 4A.
