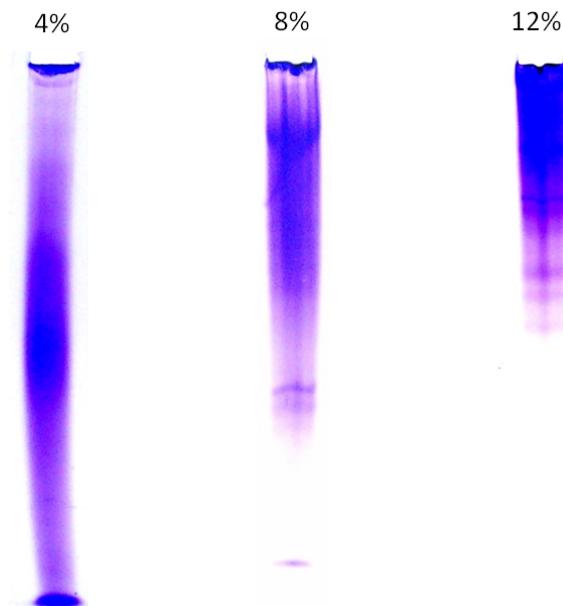

Fig. S1 Three polyacrylamide gels (4%, 8% and 12%) were compared for separating the digestive gland cytosols of oyster.

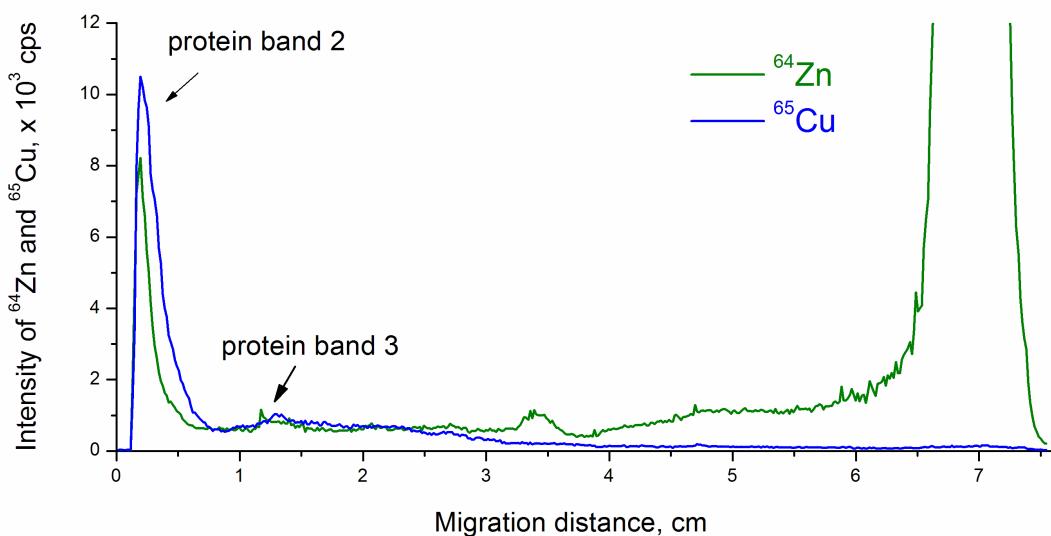

Fig. S2 ^{65}Cu and ^{64}Zn ND-PAGE-LA-ICP MS electropherograms of digestive gland cytosol from Cu-exposed oysters. The peaks marked with arrows respectively correspond to the protein band 2 and 3 in Fig. 3b and 3c. 8% polyacrylamide gel was used for separation.
