

Supplementary Information

Hybrid organic PVDF-inorganic M-rGO-TiO₂ (M=Ag, Pt) nanocomposite for multifunctional volatile organic compound sensing and photocatalytic degradation-H₂ production

W L Ong, M Gao and G W Ho*

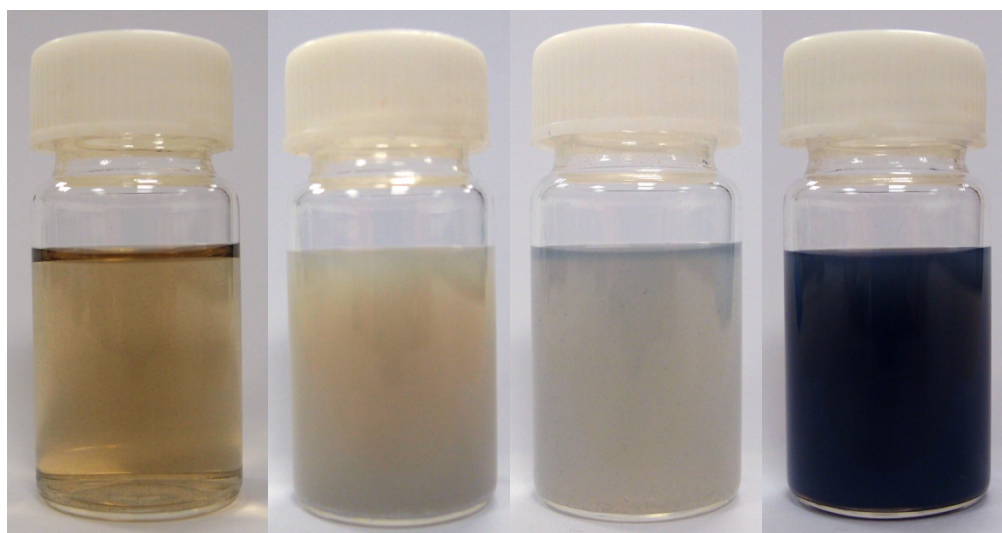

Figure S1. Digital photographs illustrating the color change of the sample with the reduction of GO (from left to right): suspension of GO in methanol-water solvent, suspension of GO-TiO₂ NTs before photoreduction, suspension of rGO-TiO₂ NTs after 1 h of photoreduction, and suspension of rGO-TiO₂ NTs after completion of photoreduction.
