

Cell growth curve of 0 μ g/ml, 1.25 μ g/ml, 2.5 μ g/ml and 5.0 μ g/ml CO-NPs treated HUVECs after 0h, 6h, 12h, and 24h incubation. Cell growth treated with various concentration of CO-NPs showed no significant differences at 0h, 6h and 12h. While, at 24h, CO-NPs were able to inhibit the growth of HUVECs remarkably in a dose dependent manner. What's more, the cells of control, 1.25 μ g and 2.5 μ g group increased 77.0%, 62.4% and 48.8% separately while the 5.0 μ g group decreased 4.6% at 24h compared with 0h. Altogether, the data suggest that CO-NPs were able to inhibit HUVECs growth significantly.
