for

**Controllable copper deficiency in  $\text{Cu}_{2-x}\text{Se}$  nanocrystals with tuning  
localized surface plasmon resonance and enhancing  
chemiluminescence †**

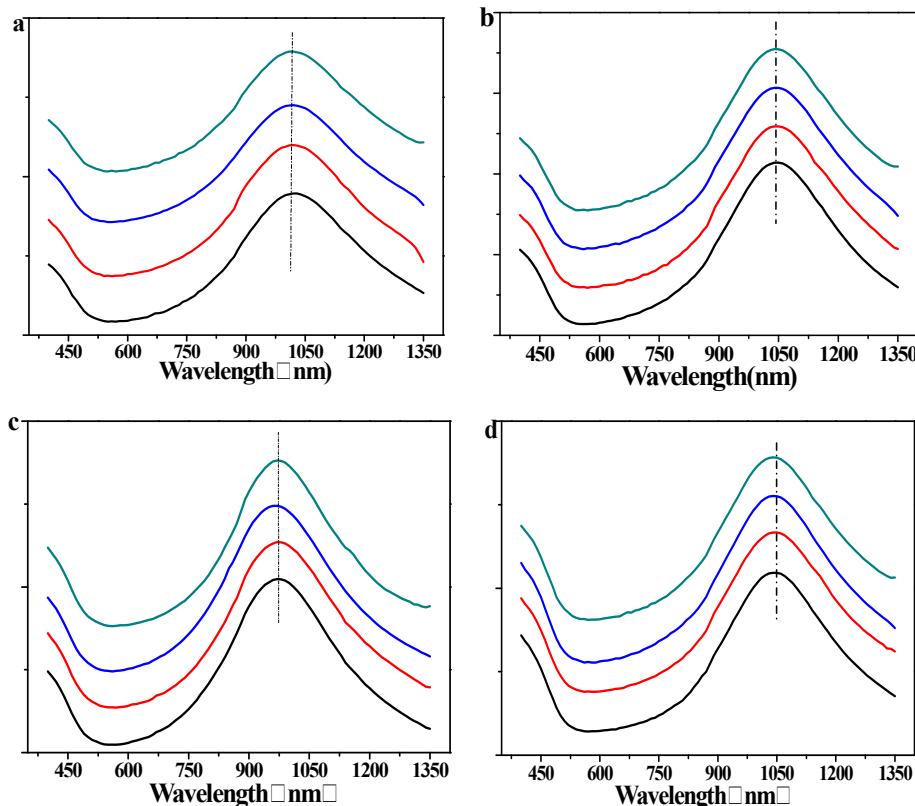

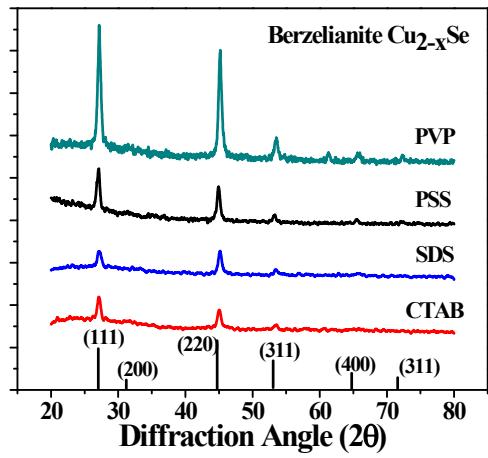

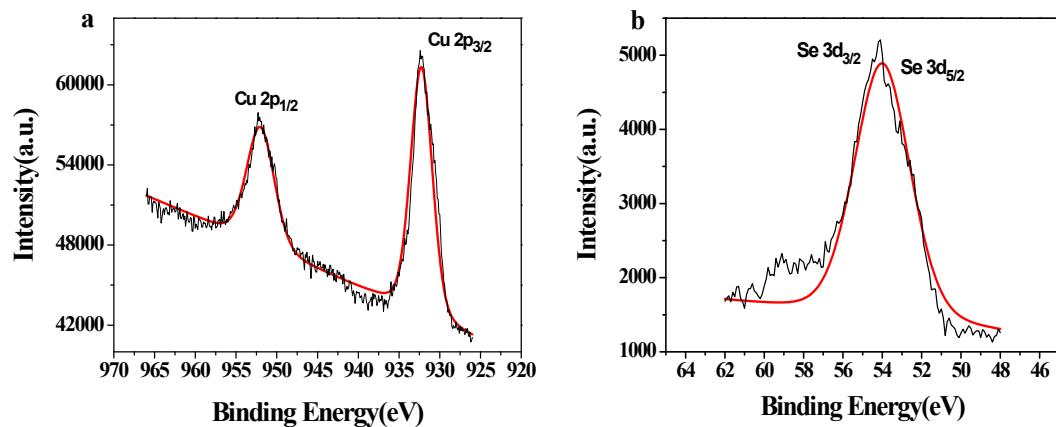

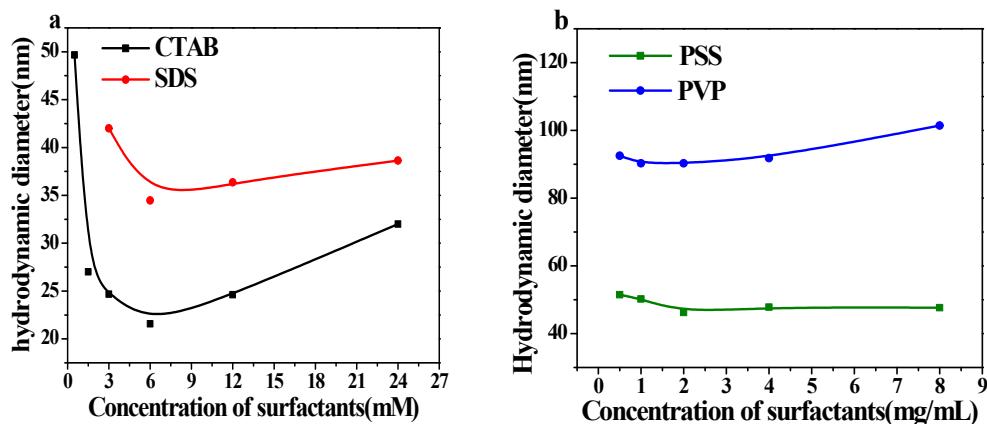

Fig. S1 The stability of  $\text{Cu}_{2-x}\text{Se}$  NCs by monitoring the absorption change every 7 days within a month when stored in 4 °C refrigerator. (a)  $\text{Cu}_{2-x}\text{Se}$  NCs stabilized by CTAB, (b)  $\text{Cu}_{2-x}\text{Se}$  NCs stabilized by SDS, (c)  $\text{Cu}_{2-x}\text{Se}$  NCs stabilized by PSS, (d)  $\text{Cu}_{2-x}\text{Se}$  NCs stabilized by PVP.

**Fig. S2** X-ray diffraction patterns of crystalline  $\text{Cu}_{2-x}\text{Se}$  NCs. XRD of the nanostructures prepared in the presence of surfactants confirmed that the as-prepared  $\text{Cu}_{2-x}\text{Se}$  are generally cubic berzelianite phase. ( $\text{Cu}_{2-x}\text{Se}$ , PDF card 06-0680)

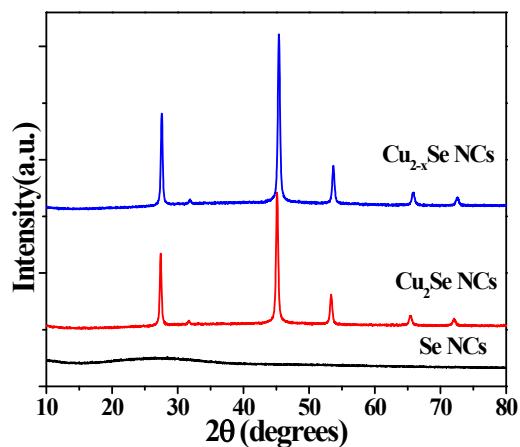

**Fig. S3** X-ray photoelectron spectroscopy of  $\text{Cu}_{2-x}\text{Se}$  NCs. (a) The binding energy of Cu 2p. (b) The binding energy of Se 3d.

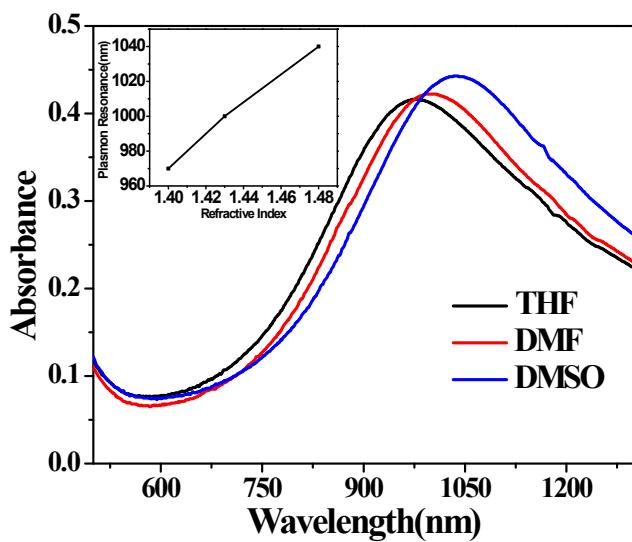

**Fig. S4** The hydrodynamic diameter of nanocrystalline  $\text{Cu}_{2-x}\text{Se}$  NCs. With changing the concentration of surfactants, the hydrodynamic diameter of  $\text{Cu}_{2-x}\text{Se}$  NCs depended on the surfactants.

**Table. S1** The comparison of the physical parameters. In presence of CTAB, SDS, PSS and PVP with different physical properties, the hydrodynamic diameter of Se NCs, Cu<sub>2</sub>Se NCs and Cu<sub>2-x</sub>Se NCs were different.

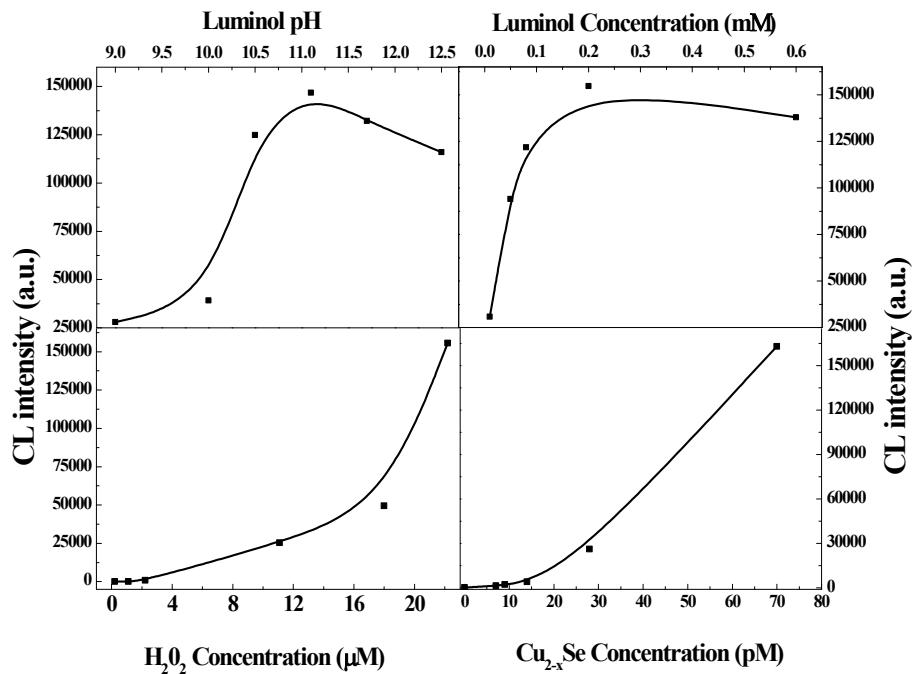

surfactant	Molecular weight	electric charge	Hydrodynamic diameter of Se NCs	Hydrodynamic diameter of Cu <sub>2</sub> Se NCs	Hydrodynamic diameter of Cu <sub>2-x</sub> Se NCs
CTAB (6 mM)	364.45	+57.9 mV	29.18 nm	22.56 nm	22.18 nm
SDS (6 mM)	288.38	-38.9 mV	32.8 nm	36.6 nm	35.8 nm
PSS (2 mg/ml)	70000	-55.9 mV	44.28 nm	47.73 nm	45.72 nm
PVP (2 mg/ml)	55000	+7.7 mV	88.26 nm	83.07 nm	82.33 nm

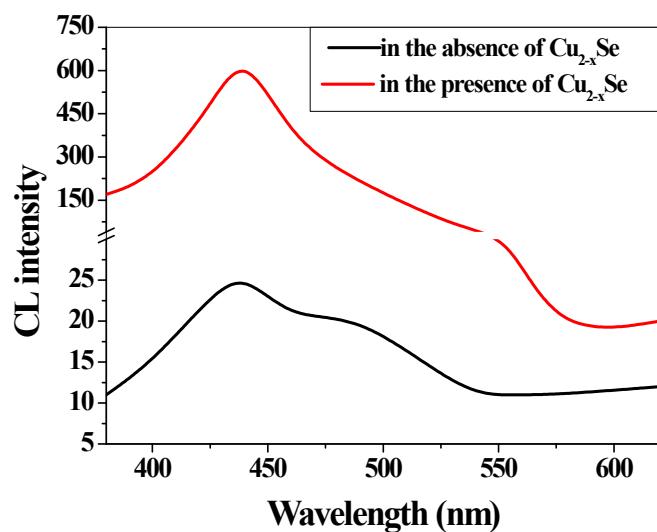

**Fig. S5** X-ray diffraction patterns of Se NCs, Cu<sub>2-x</sub>Se NCs and Cu<sub>2-x</sub>Se NCs. XRD of the nanostructures prepared in the presence of PSS and the diffraction patterns illustrated a significant shift of diffraction peaks during the conversion from Cu<sub>2-x</sub>Se NCs to Cu<sub>2-x</sub>Se NCs.

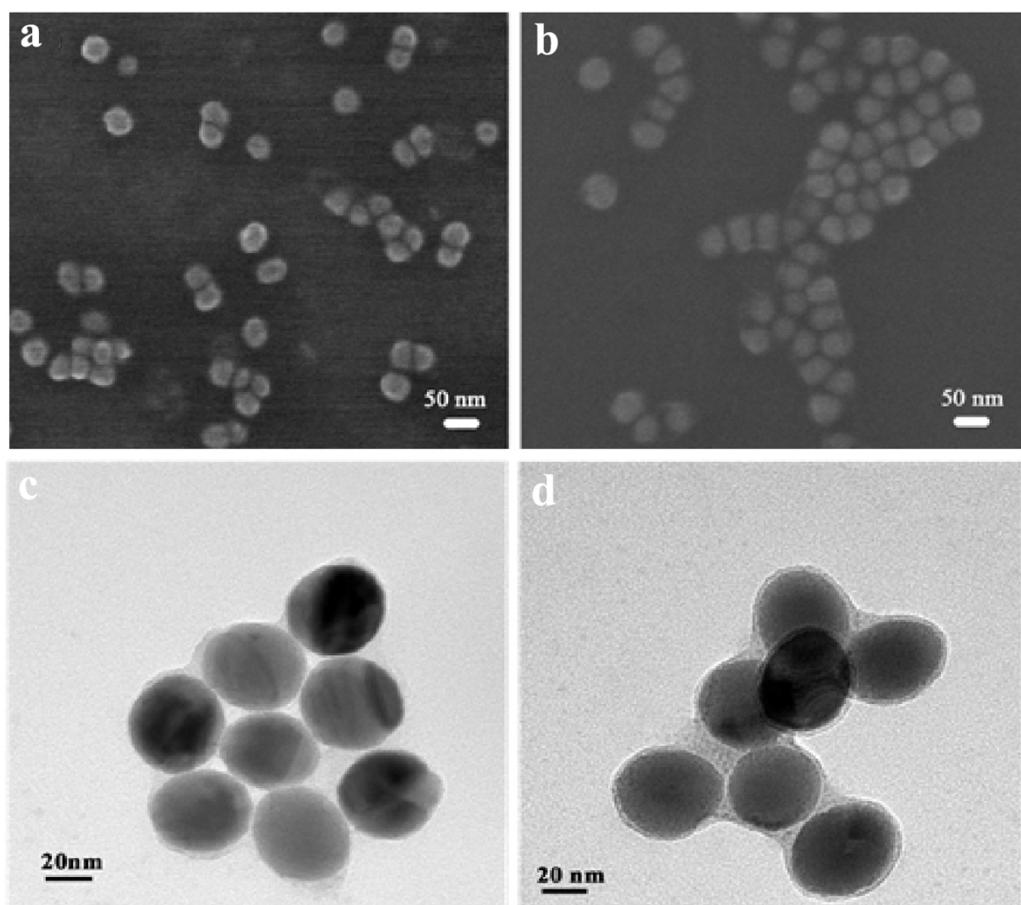

**Fig. S6** Localized surface plasmon resonances in absorbance spectra of  $\text{Cu}_{2-x}\text{Se}$  NCs capped by PSS.  $\text{Cu}_{2-x}\text{Se}$  NCs dispersed in three different solvents with different refractive index: tetrahydrofuran (THF, 1.4), dimethylformamide (DMF, 1.43) and dimethyl sulfoxide (DMSO, 1.48). The inset showed the dependence of LSPR frequency upon solvent refractive index.

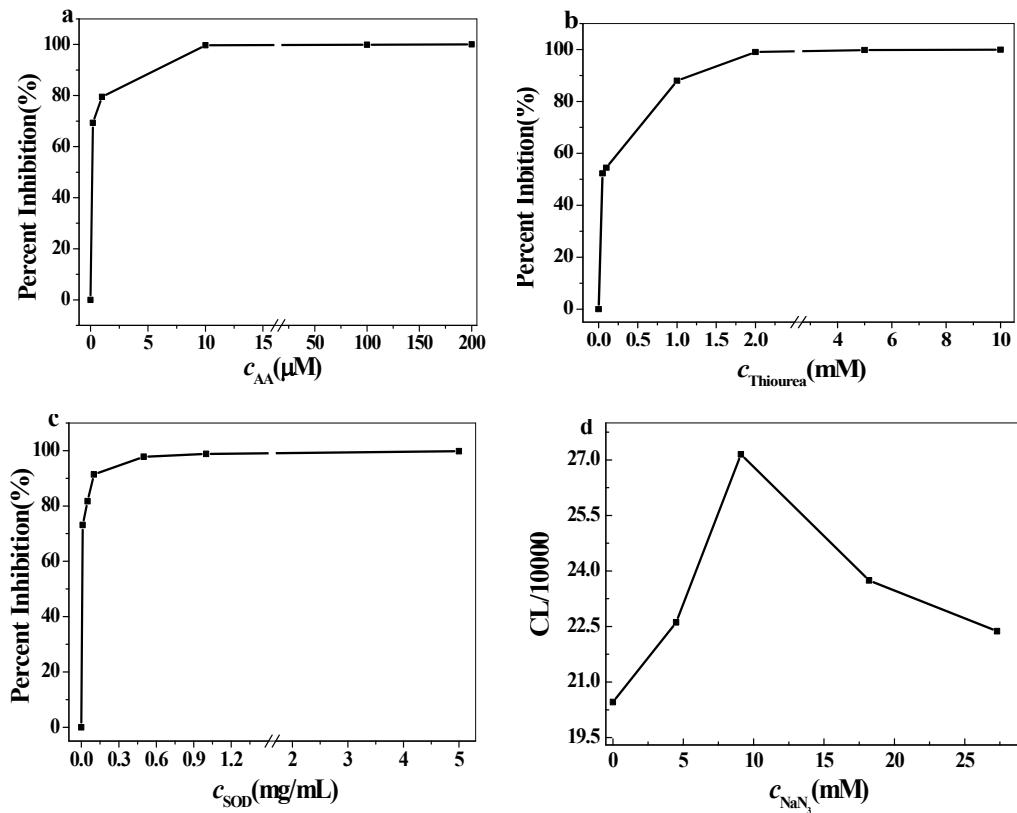

**Fig. S7** Effects of the reactant conditions on luminol- $\text{H}_2\text{O}_2$  CL system in the presence of PSS- $\text{Cu}_{2-x}\text{Se}$ . (a) Effect of luminol pH: 2.0 $\times 10^{-4}$  M luminol, 22.2  $\mu\text{M}$   $\text{H}_2\text{O}_2$ , 70.0 pM PSS- $\text{Cu}_{2-x}\text{Se}$ . (b) Effect of luminol concentration: NaOH medium (pH 11.1), 22.2  $\mu\text{M}$   $\text{H}_2\text{O}_2$ , 70.0 pM PSS- $\text{Cu}_{2-x}\text{Se}$ . (c) Effect of  $\text{H}_2\text{O}_2$  concentration: 2.0 $\times 10^{-4}$  M luminol in NaOH medium (pH 11.1), 70.0 pM PSS- $\text{Cu}_{2-x}\text{Se}$ . (d) Effect of PSS- $\text{Cu}_{2-x}\text{Se}$  concentration: 2.0 $\times 10^{-4}$  M luminol in NaOH medium (pH 11.1), 22.2  $\mu\text{M}$   $\text{H}_2\text{O}_2$ .

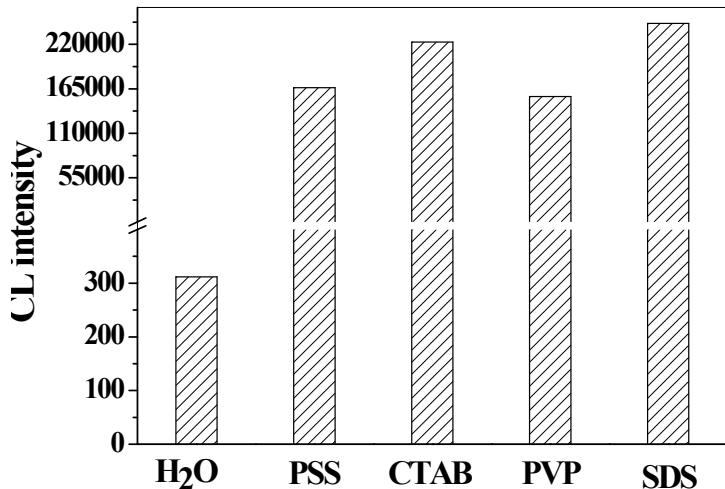

**Fig. S8** Chemiluminescent spectra of (a) luminol-H<sub>2</sub>O<sub>2</sub>-PSS-Cu<sub>2-x</sub>Se, and (b) luminol-H<sub>2</sub>O<sub>2</sub>. Final concentrations: luminol,  $2.0 \times 10^{-4}$  M; H<sub>2</sub>O<sub>2</sub>, 22.2  $\mu$ M; PSS-Cu<sub>2-x</sub>Se, 70.0 pM.

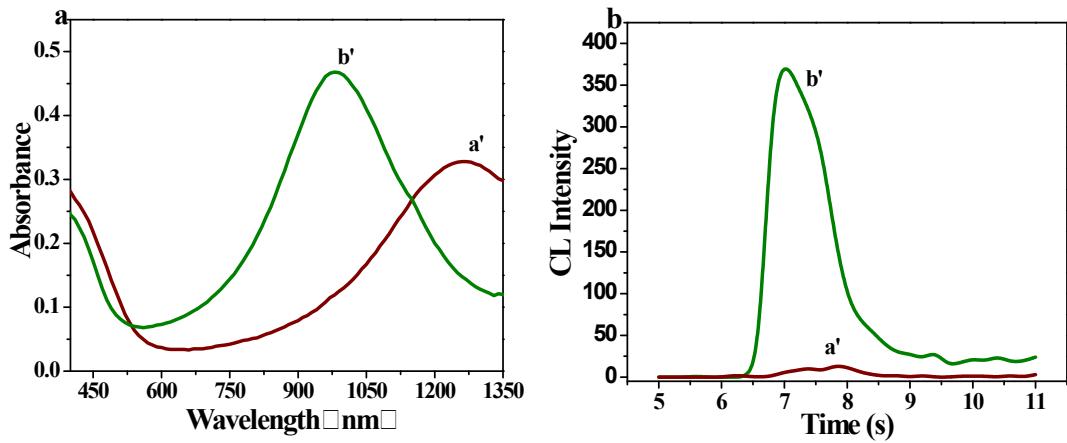

**Fig. S9** SEM and TEM images of PSS-Cu<sub>2-x</sub>Se before (a), (c) and after (b), (d) the CL reaction.

**Fig. S10** Effects of the different radical scavengers of (a) AA, (b) thiourea, (c) SOD, and (d) NaN<sub>3</sub> on the CL intensity of luminol-H<sub>2</sub>O<sub>2</sub>-PSS-Cu<sub>2-x</sub>Se system. Final concentrations: luminol,  $2.0 \times 10^{-4}$  M; H<sub>2</sub>O<sub>2</sub>, 22.2  $\mu\text{M}$ ; PSS-Cu<sub>2-x</sub>Se, 70.0 pM.

**Fig. S11** Comparison of catalytic activity of different surfactant coated Cu<sub>2-x</sub>Se NCs. Final concentrations: luminol,  $2.0 \times 10^{-4}$  M; H<sub>2</sub>O<sub>2</sub>, 22.2  $\mu\text{M}$ ; Cu<sub>2-x</sub>Se, 70.0 pM.

**Fig. S12** Comparison of catalytic activity of PSS- $\text{Cu}_{2-x}\text{Se}$  NCs with different copper deficiency. (a) The absorption spectra of  $\text{Cu}_{2-x}\text{Se}$  NCs with  $x \sim 0$  ( $a'$ ) and  $\text{Cu}_{2-x}\text{Se}$  NCs with  $x > 0$  ( $b'$ ). (b) Kinetic monitoring on luminol- $\text{H}_2\text{O}_2$  CL in the presence of  $a'$  and  $b'$ , respectively. Conditions: luminol,  $2.0 \times 10^{-4}$  M;  $\text{H}_2\text{O}_2$ ,  $1 \times 10^{-4}$  M. The as-prepared PSS- $\text{Cu}_{2-x}\text{Se}$  NCs had been subjected to centrifugation to remove the residual  $\text{Cu}^{2+}$  or PSS species but without dialysis.
