

P-selectin-Biacore Inhibition Assay

P-selectin inhibition assays for **3** and **4** were performed using a surface plasmon (Biacore) assay on a Biacore 3000 instrument, following the published protocol.¹ Biotinylated 19ek (a purified monomeric truncated form of human PSGL-1) was immobilized on SA sensor chip 11 and a soluble recombinant truncated form of human P-selectin was delivered at to the coated 19ek sensor chip at 30 L/min and 25 °C in the presence and absence of the test ligand.
