- UV-melting profiles for self-complementary sequences **27-30** (ESI-Figure 1).
- Van't Hoff plots for obtaining the data in Table 6 (ESI-Figure 2).
- Modelling data; Root mean squared deviation (ESI-Figure 3) and alignment of dipole vectors (ESI-Figure 4).

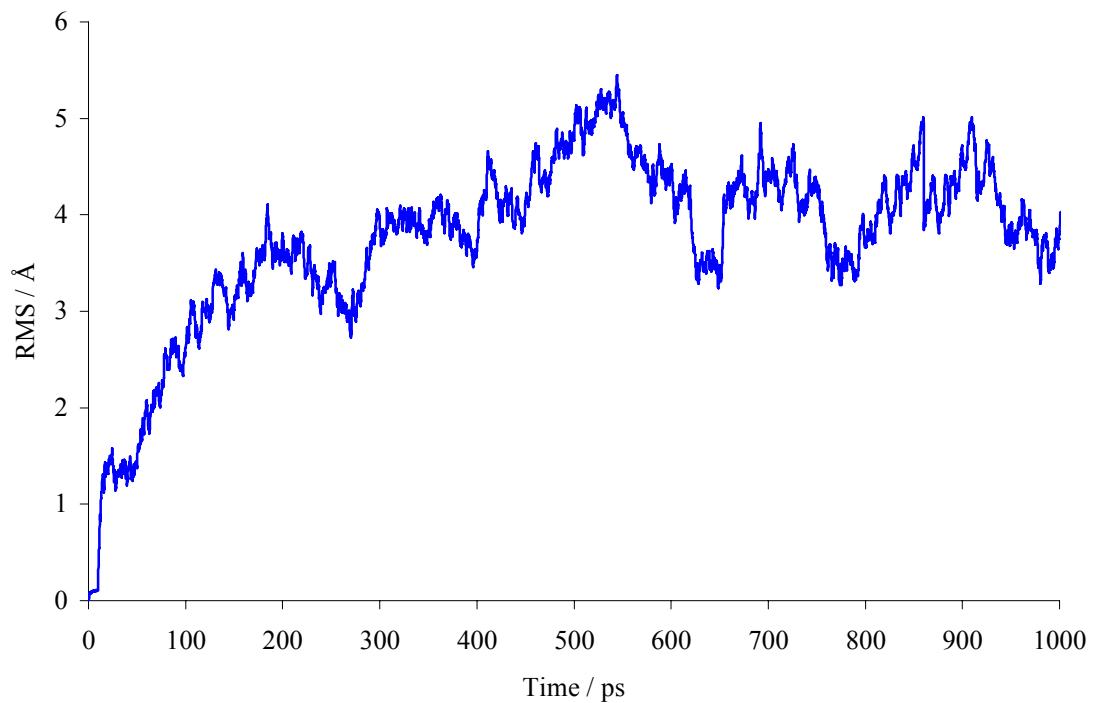

ESI-Figure 1. UV-melting profiles for the 5'-ATATATATATAT-3' zipper motifs. % Hyp. = $(\text{Abs}(\text{T})/\text{Abs}(10^\circ\text{C}) - 1) \cdot 100\%$.

ESI-Figure 2. $1/T_m$ vs. $\ln(C)$ plots of the four combinations (110 mM Na^+ , pH 7.0, $C^\circ = 1 \text{ mol/l}$).

ESI-Figure 3. Root mean squared deviation (\AA) for the conformational fit of the backbone to the initial A-type conformation during the 1000 ps simulation.

ESI-Figure 4. Alignment of the two extra thymidine nucleobases electric dipoles during the 1000 ps simulation.
