## Preparation of the diastereoisomers of 3-N,N-dibenzylamino-5-tert-butyl-cyclohex-1-ene

syn-21 and anti-22 were both prepared from 4-tert-butylcyclohexanol 39, employing literature procedures reported by Ferrier, ${ }^{1}$ Donohoe $^{2}$ and Aggarwal, ${ }^{3}$ and other standard chemical transformations. 4-tertButylcyclohexene $\mathbf{4 0}$ was prepared via treatment of $\mathbf{3 9}$ with a solution of $\mathrm{POCl}_{3}$ in pyridine in $87 \%$ yield. In an alternative and higher yielding synthesis, mesylation of $\mathbf{3 9}$ was achieved in $93 \%$ yield, with subsequent DBU mediated elimination giving 40 in quantitative yield. Allylic bromination of $\mathbf{4 0}$ gave $\mathbf{4 1}$ as a mixture of diastereoisomers, and treatment of this crude reaction mixture with $\mathrm{Na}_{2} \mathrm{CO}_{3}$ in $\mathrm{H}_{2} \mathrm{O}$ /acetone gave 5-tert-butyl-3-hydroxycyclohexene as mixture of diastereoisomers 42 and 43.

Reagents and conditions: (i) $\mathrm{POCl}_{3}$, pyridine, $0{ }^{\circ} \mathrm{C}$ to rt, 24 h ; (ii) $\mathrm{MsCl}, \mathrm{Et}_{3} \mathrm{~N}, \mathrm{DMAP}, \mathrm{DCM}, 0^{\circ} \mathrm{C}$ to $\mathrm{rt}, 16 \mathrm{~h}$, then $\mathrm{DBU}, 100{ }^{\circ} \mathrm{C}$, 24 h ; (iii) NBS, benzoyl peroxide, $\mathrm{CCl}_{4}, \Delta, 10 \mathrm{~min}$; (iv) $27 \%$ aq acetone, $\mathrm{Na}_{2} \mathrm{CO}_{3}, \Delta, 40 \mathrm{~min}$.
syn-21 was accessed from the diastereomeric mixture of alcohols $\mathbf{4 2}$ and $\mathbf{4 3}$ via oxidation with IBX to give enone 44, and stereoselective reduction with $\mathrm{LiAlH}_{4}$ to give syn-42 in $95 \%$ de. Formation of the corresponding trichloroacetimidate $\mathbf{4 5}$ was followed by Overman rearrangement to give trichloroacetamide 46. Amide hydrolysis gave 47, with subsequent exhaustive benzylation giving syn-21 in $>98 \%$ de and $2 \%$ overall yield from 44.

[^0]

Reagents and conditions: (i) IBX, DMSO, $0^{\circ} \mathrm{C}$ to rt, 10.5 h ; (ii) $\mathrm{LiAlH}_{4}$, THF, $-78{ }^{\circ} \mathrm{C}, 4 \mathrm{~h}$; (iii) $\mathrm{Cl}_{3} \mathrm{CCN}, \mathrm{DBU}, \mathrm{DCM}, 0^{\circ} \mathrm{C}, 75 \mathrm{~h}$; (iv) $\mathrm{K}_{2} \mathrm{CO}_{3}, p$-xylene, $\Delta, 8.5 \mathrm{~h}$; (v) $\mathrm{NaOH}\left(6 \mathrm{M}\right.$, aq), EtOH, $0^{\circ} \mathrm{C}, 24 \mathrm{~h}$; (vi) BnBr , Hünig's base, DMAP, DCM, rt, 24 h .
anti-22 was accessed from the diastereomeric mixture of alcohols 42 and 43 via acylation with pnitrobenzoyl chloride to give a 69:31 anti:syn diastereoisomeric mixture, which was purified via recrystallisation from EtOH to give 48 in $>98 \%$ de and $36 \%$ yield over 3 steps from $\mathbf{4 0}$. Base catalysed hydrolysis of $\mathbf{4 8}$ gave $\mathbf{4 3}$ in $>95 \%$ de. Manipulation of $\mathbf{4 3}$ to 50, followed by hydrolysis, $N, N$-dibenzylation and column chromatography gave anti-22 in $>98 \%$ de and $30 \%$ yield from 43.

Reagents and conditions: (i) p-nitrobenzoyl chloride, pyridine, DMAP, then recrystallisation (EtOH); (ii) $\mathrm{NaOH}, 66 \% \mathrm{MeOH}$ (aq), $\Delta, 30 \mathrm{~min}$; (iii) $\mathrm{CCl}_{3} \mathrm{CN}, \mathrm{DBU}, \mathrm{DCM}, 0^{\circ} \mathrm{C}, 75 \mathrm{~min}$; (iv) $\mathrm{K}_{2} \mathrm{CO}_{3}, p$-xylene, $\Delta, 8.5 \mathrm{~h}$; (v) $\mathrm{NaOH}\left(6 \mathrm{M}\right.$, aq), EtOH, $0{ }^{\circ} \mathrm{C}, 24 \mathrm{~h}$; (vi) $\mathrm{BnBr},{ }^{\mathrm{i}} \mathrm{Pr}_{2} \mathrm{NEt}$, DMAP, DCM, rt, 24 h . $\left[\mathrm{Ar}=p-\mathrm{NO}_{2} \mathrm{C}_{6} \mathrm{H}_{4}\right]$.

## Experimental

## General Experimental

Water was purified by an Elix ${ }^{\circledR}$ UV-10 system. All other solvents were used as supplied (analytical or HPLC grade) without prior purification. Organic layers were dried over $\mathrm{MgSO}_{4}$. Thin layer chromatography was performed on aluminium plates coated with $60 \mathrm{~F}_{254}$ silica. Plates were visualised using UV light ( 254 nm ), iodine, $1 \%$ aq $\mathrm{KMnO}_{4}$, or $10 \%$ ethanolic phosphomolybdic acid. Flash column chromatography was performed either on Kieselgel 60 silica on a glass column, or on a Biotage SP4 automated flash column chromatography platform.

Melting points were recorded on a Gallenkamp Hot Stage apparatus and are uncorrected. IR spectra were recorded on a Bruker Tensor 27 FT-IR spectrometer as either a thin film on NaCl plates (film) or a KBr disc ( KBr ), as stated. Selected characteristic peaks are reported in $\mathrm{cm}^{-1}$. NMR spectra were recorded on Bruker Avance spectrometers in the deuterated solvent stated. The field was locked by external referencing to the relevant deuteron resonance. Low-resolution mass spectra were recorded on either a VG MassLab 20-250 or a Micromass Platform 1 spectrometer. Accurate mass measurements were run on either a Bruker MicroTOF internally calibrated with polyalanine, or a Micromass GCT instrument fitted with a Scientific Glass Instruments BPX5 column ( $15 \mathrm{~m} \times 0.25 \mathrm{~mm}$ ) using amyl acetate as a lock mass.

Method A: $\mathrm{POCl}_{3}(31 \mathrm{~mL}, 332 \mathrm{mmol})$ was added to a stirred solution of 4-tert-butyl-cyclohexanol 39 (10.0 $\mathrm{g}, 64 \mathrm{mmol})$ in pyridine $(77.6 \mathrm{~mL})$ at $0^{\circ} \mathrm{C}$. The mixture was then allowed to warm to rt over 24 h before being cooled to $0^{\circ} \mathrm{C}$. The reaction mixture was then quenched by dropwise addition of $\mathrm{H}_{2} \mathrm{O}(100 \mathrm{~mL})$. The mixture was then extracted with $\mathrm{Et}_{2} \mathrm{O}(3 \times 100 \mathrm{~mL})$ and the combined organic extracts were dried and concentrated in vacuo. The residue was filtered through a pad of silica gel (eluent $30-40^{\circ} \mathrm{C}$ petrol) to give 40 as a colourless oil $(7.71 \mathrm{~g}, 87 \%) ; \delta_{\mathrm{H}}\left(400 \mathrm{MHz}, \mathrm{CDCl}_{3}\right) 0.87\left(9 \mathrm{H}, \mathrm{s}, \mathrm{CMe} e_{3}\right), 1.08-1.23\left(1 \mathrm{H}, \mathrm{m}, \mathrm{C}(5) H_{\mathrm{A}}\right)$, 1.24-1.35 (1H, m, C(4)H), 1.72-1.88(2H, m, C(5) $\left.H_{\mathrm{B}}, \mathrm{C}(6) H_{\mathrm{A}}\right), 1.94-2.16\left(3 \mathrm{H}, \mathrm{m}, \mathrm{C}(3) H_{2}, \mathrm{C}(6) H_{\mathrm{B}}\right), 5.61-$ $5.76(2 \mathrm{H}, \mathrm{m}, \mathrm{C}(1) H, \mathrm{C}(2) H)$.

The mixture was stirred for 1 h at $0^{\circ} \mathrm{C}$ before being allowed to warm to rt over 24 h . The mixture was then allowed to cool to rt before being further cooled to 0 ${ }^{\circ} \mathrm{C}$. $1 \mathrm{M} \mathrm{aq} . \mathrm{HCl}(100 \mathrm{~mL})$ was then added and the mixture was extracted with $30-40{ }^{\circ} \mathrm{C}$ petrol $(3 \times 500$ $\mathrm{mL})$. The combined organic extracts were washed with $1 \mathrm{M} \mathrm{aq} .\mathrm{HCl}(1 \mathrm{~L})$, dried, and concentrated in vacuo to give 40 as a colourless oil ( 16.6 g , quant).
