Figure ESI1. Representative ${}^1\text{H}$ NMR spectrum of the outcome of the aldol reaction catalyzed by **1c**.

a)

b)

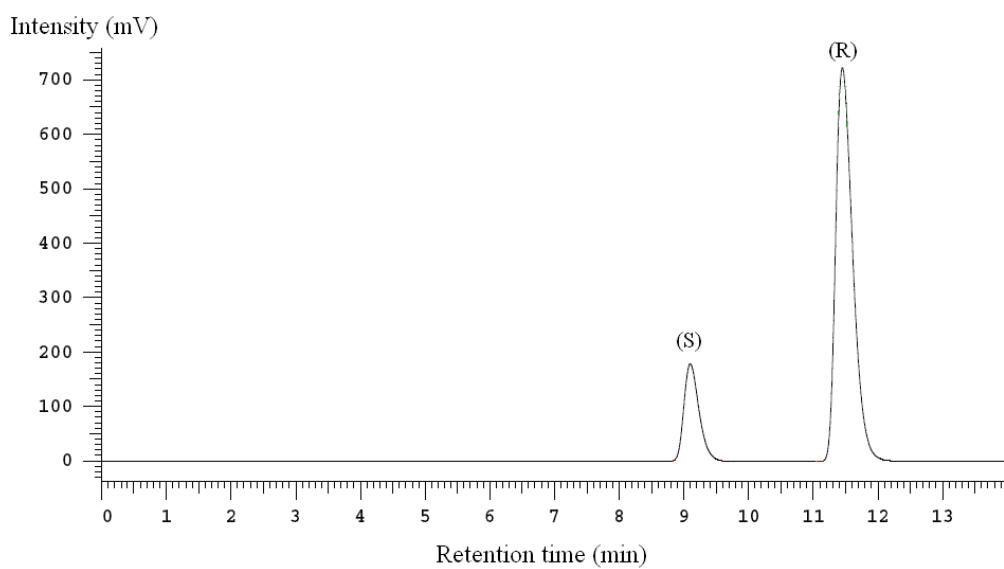

Figure ESI2. **a)** Chromatogram of racemic mixture of aldol and **b)** mixture enriched in the enantiomer R.

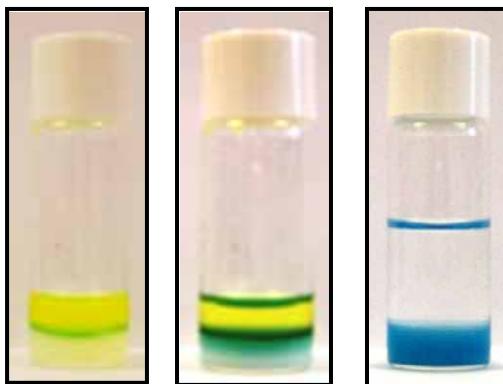

Figure ESI3. Diffusion of a solution of Bromothymol Blue (**I**₃, conc.= 3×10^{-4} mM, yellow) through a gel of compound **1c** in acetonitrile (left to right). The gel phase takes a blue colour typical from the basic form of the dye as diffusion progresses. Final addition of extra solvent allows the observation of a strong blue gel.

| pKa | Base | | I ₁ | I ₂ | I ₃ | I ₄ |
|------|----------------------|--|----------------|----------------|----------------|----------------|
| 24.3 | DBU | | Red | Yellow | Blue | Purple |
| 19.5 | Pyrrolidine | | Red | Yellow | Blue | Yellow |
| 16.9 | Benzylamine | | Red | Yellow | Green | Clear |
| | 1c (solution) | | Red | Yellow | Green | Clear |
| | 2c (solution) | | Red | Yellow | Green | Clear |
| 12.5 | Pyridine | | Red | Yellow | Green | Clear |

Figure ESI4. pKa scale for **1c**, **2** and other common organic bases in CH₃CN and their solutions with dyes (**I**₁: Congo Red; **I**₂: 4-nitrophenol; **I**₃: Bromothymol Blue; **I**₄: Phenol Red; [I_n] = 3×10^{-4} mM; [Base] = 3.6 mM in all the cases but **1c** gel (1.8 mM).

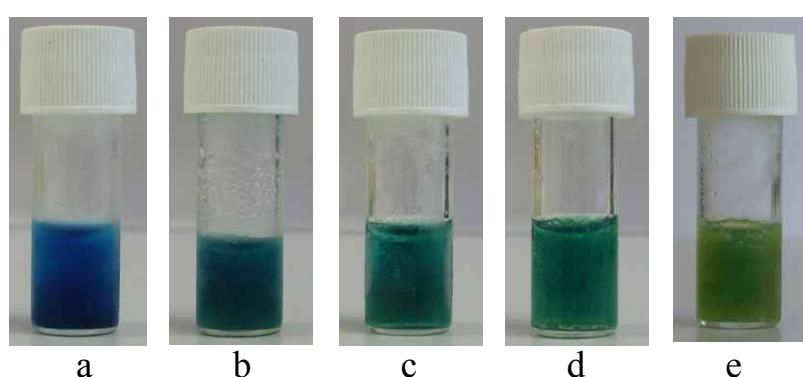

Figure ESI5. Two-component gels of **1c** and **3** in CH₃CN in the presence of **I**₃. [1c] = 15 mM in all cases; a) [3]= 0 mM; b) [3]= 3.75 mM; c) [3]= 7.50 mM; d) [3]= 11.25 mM and e) [3]= 15.00 mM.
