

## Electronic Supplementary Information

# Synthesis of novel synthetic intermediates from the reaction of benzimidazole and triazole carbenes with ketenimines and their application in the construction of spiro-pyrroles

Jun-Ming Mo, Yang-Guang Ma and Ying Cheng\*

College of Chemistry, Beijing Normal University, Beijing 100875, China

E-mail: ycheng2@bnu.edu.cn

### 1. The preparation of 2-(2-alkoxycarbonyl-1-arylamino-1-propenyl)benzimidazolium salts 3 or 5-(2-alkoxycarbonyl-1-arylamino-1-propenyl)triazolium salts 5 from the reaction of benzimidazole or triazole carbenes with ketenimines.

Under nitrogen atmosphere and at  $-20^{\circ}\text{C}$ , benzimidazolium chloride or bromide salts **1** (0.5 mmol) or triazolium chloride salts **4** (0.5 mmol) were mixed with *t*-BuOK (0.5 mmol) in dry THF (30 mL) and stirred for 5 min. Ketenimines **2** (0.5 mmol) were added to the reaction mixture and the mixture were stirred at  $-20^{\circ}\text{C}$  for 1 h. After removal of solvent under vacuum at room temperature, the residue was chromatographed on a neutral  $\text{Al}_2\text{O}_3$  column eluting with a mixture of acetone and methanol (5:1). The eluent was evaporated and the 2-(2-alkoxycarbonyl-1-arylamino-1-propenyl)benzimidazolium chlorides or bromides **3** or 5-(2-alkoxycarbonyl-1-arylamino-1-propenyl)triazolium chlorides **5** were isolated in 68-93% or 68-81% yields, respectively. The benzimidazolium or triazolium chlorides or bromides **3** or **5** were converted into tetrafluoroborate salts by treatment with  $\text{NH}_4\text{BF}_4$  in methanol.

**2. General procedure for the reaction of 2-(2-alkoxycarbonyl-1-arylamino-1-propenyl)benzimidazolium salts **3** or 5-(2-alkoxycarbonyl-1-arylamino-1-propenyl)triazolium salts **5** with ethyl propiolate or DMAD.**

Under nitrogen atmosphere and at room temperature, benzimidazolium salts **3** (0.5 mmol) or triazolium salts **5** (0.5 mmol) were mixed with *t*-BuOK (0.6 mmol) in dry toluene. After the temperature was elevated to 80 °C, ethyl propiolate or DMAD (0.6 mmol) was added to the mixture. The reaction mixture was stirred at 80 °C for half an hour and then the solvent was removed under vacuum. The products **11**, **12**, **14** or **15** were isolated by chromatography on a silica gel column eluting with a mixture of petroleum ether (60–90 °C) and ethyl acetate (5:1).

**3. General procedure for the reaction of 2-(2-alkoxycarbonyl-1-arylamino-1-propenyl)benzimidazolium salts 3 or 5-(2-alkoxycarbonyl-1-arylamino-1-propenyl)triazolium salts 5 with allenes 16.**

**Method A:** Under nitrogen atmosphere, benzimidazolium salts 3 (0.5 mmol) or triazolium salts 5 (0.5 mmol) were mixed with *t*-BuOK (0.6 mmol) in dry toluene at room temperature. When the temperature was elevated to 60 °C, allenes 16 (0.5 mmol) was added to the reaction mixture, and the mixture was stirred for 3-5 h at 60 °C. After removal of solvent under vacuum, the products 17, or 19-I and 19-II were isolated, respectively, by chromatography on a silica gel column eluting with a mixture of petroleum ether (60-90 °C) and ethyl acetate (7:1). 19-I and 19-II can be converted into 20 by stand in deuterium chloroform for a few days.

**Method B:** Under nitrogen atmosphere and at room temperature, benzimidazolium salts 3 (0.5 mmol) were mixed with *t*-BuOK (0.6 mmol) in dry toluene. After allenes 16 (0.5 mmol) was added, the reaction mixture stirred for 48 h in refluxing toluene. The solvent was removed under vacuum, and the compounds 18 and 17 were isolated as major and minor products by chromatography on a silica gel column eluting with a mixture of petroleum ether (60-90 °C) and ethyl acetate (7:1).
