Figure. Docked orientations of compound **1** (stick representation, coloured by atom), compound **2** (stick representation, coloured red) and compound **10** (stick representation, coloured yellow). Heme is displayed as stick representation and coloured by atom. For simplicity hydrogen atoms are omitted. The solid surface represents the solvent accessible surface with a probe radius of 1.4 Å.

Figure. Docked orientations of compound **1** (stick representation, coloured by atom), compound **3** (stick representation, coloured green) and compound **4** (stick representation, coloured blue). Heme is displayed as stick representation and coloured by atom. For simplicity hydrogen atoms are omitted. The solid surface represents the solvent accessible surface with a probe radius of 1.4 Å.
