## General Methods

All reactions were run under an atmosphere of dry argon using oven-dried glassware and freshly distilled and dried solvents. Toluene, $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ and diethyl ether were dried on an Innovative technology drying system. The metallic precursors were purchased from Strem Chemicals and the rest of the chemicals were obtained from Sigma-Aldrich and used without further purification. TLC was performed on Silica Gel GF254 (Merck) with detection by charring with phosphomolybdic acid/EtOH. For flash chromatography, silica Gel (Merck 230-400 mesh) was used. Chromatographic columns were eluted with positive air pressure and eluents are given as volume to volume ratios (v/v). NMR spectra were recorded with a Bruker Avance DPX400 ( $\left.{ }^{1} \mathrm{H}, 400 \mathrm{MHz}\right)$ and Bruker Avance DRX500 ( $\left.{ }^{1} \mathrm{H}, 500 \mathrm{MHz}\right)$, spectrometers. Chemical shifts are reported in ppm, and coupling constants are reported in Hz. Routine spectra were referenced to the residual proton or carbon signals of the solvent. High Resolution mass spectra (HRMS) were recorded in "Centro de Investigación, Tecnología e Innovación de la Universidad de Sevilla" with a Kratos MS-80RFA 241-MC apparatus. Optical rotations were determined with a Perkin-Elmer 341 polarimeter. Elemental analysis were measured in a LECO TruSpec ${ }^{\circledR}$ CHNS-932 apparatus. Melting points were measured in STUART SMP3 apparatus in open end capillary tubes. Enantiomeric excesses were measured on a Waters alliance 2695 and Agilent Technologies 1200 series apparatus with stationary chiral phase columns (Chiralcel ${ }^{\circledR}$ AD, OD, OD-H, AS-H).

## Synthesis of sulfinamido-olefin ("sulfolefin") ligands ${ }^{1}$

## General method for the synthesis of DAG-derived ligands

A solution of allylamine ( $375 \mu \mathrm{~L}, 5 \mathrm{mmol}$ ) in THF ( 7 mL ) is cooled to $-78{ }^{\circ} \mathrm{C}$ for 15 min , then a commercial solution of $n-\mathrm{BuLi}(3.2 \mathrm{~mL}, 5 \mathrm{mmol})$ is added dropwise and the reaction is stirred for 2 hours at $-78^{\circ} \mathrm{C}$. This solution is added via cannula over a solution of the corresponding DAG-sulfinylating agent ( 2.5 mmol ). The reaction is stirred at $-78{ }^{\circ} \mathrm{C}$ for 5 min , then $\mathrm{H}_{2} \mathrm{O}(10 \mathrm{~mL})$ is added carefully. The phases are separated, the aqueous layer is extracted with EtOAc ( $2 \times 10 \mathrm{~mL}$ ) and the organic extracts are collected and dried over anhydrous $\mathrm{MgSO}_{4}$. The solvent is eliminated under vacuum and the residue is purified by flash chromatography. Eluents are detailed for each case.

## Representative procedure for the $\mathbf{R h}(\mathrm{I})$ catalyzed $\mathbf{1 , 4}$-addition of boronic acids to enones

A mixture of sulfolefin ligand $5(7.1 \mathrm{mg}, 0.03 \mathrm{mmol})$ and $\left[\mathrm{Rh}\left(\mathrm{C}_{2} \mathrm{H}_{4}\right)_{2} \mathrm{Cl}\right]_{2}(6.0$ $\mathrm{mg}, 0.015 \mathrm{mmol})$ is stirred for 0.5 hours in 1.2 mL of degassed solvent. $\mathrm{PhB}(\mathrm{OH})_{2}(146$ $\mathrm{mg}, 1.2 \mathrm{mmol})$ is added over the catalyst and sequentially the $\alpha, \beta$-unsaturated carbonyl compound ( 0.6 mmol ) and 2.5 M KOH aqueous solution ( $120 \mu \mathrm{~L}, 2.5 \mathrm{M}$ ). The reaction is followed by TLC, and once the starting material is consumed, the crude reaction mixture is purified by flash chromatography. The eluents are detailed for each case.

## (R)-3-Phenyl-cyclohexanone (8)

Following the typical procedure for the 1,4-addition, the reaction of cyclohexenone $\mathbf{6}$ $(58 \mu \mathrm{~L}, 0.6 \mathrm{mmol})$ and phenyl boronic acid $7(146 \mathrm{mg}, 1.2 \mathrm{mmol})$ gave, after flash chromatography (Hexane: $\mathrm{Et}_{2} \mathrm{O}, 9: 1$ ), the product $\mathbf{8}$ as a colourless oil. [^0]:    ${ }^{1}$ For the synthesis of the racemic ligands for HPLC studies, allylamine was treated with 2 eq. of nBuLi followed by quenching with the corresponding racemic sulfinyl chloride according to the following scheme.
