General Remarks: ^1H NMR spectra were recorded on a Bruker AM-300 or AM-400 spectrometer for solution in CDCl_3 with tetramethylsilane (TMS) as internal standard; J-values are in Hz. Mass spectra were recorded with a HP-5989 instrument. All of the compounds reported in this paper gave satisfactory HRMS analytic data. Melting points were determined on a digital melting point apparatus and temperatures were uncorrected. Infrared spectra were recorded on a Perkin-Elmer PE-983 spectrometer with absorption in cm^{-1} . Optical rotations were determined at 589 nm (sodium D line) by using a Perkin-Elmer-341 MC digital polarimeter; $[\alpha]_D$ -values are given in unit of $10 \text{ deg}^{-1} \text{ cm}^2 \text{ g}^{-1}$. Chiral HPLC was performed on a SHIMADZU SPD-10A vp series with chiral columns (Chiraldak AD-H, IC-H columns $4.6 \times 250 \text{ mm}$, (Daicel Chemical Ind., Ltd.)). THF, toluene and Et_2O were distilled from sodium (Na) under argon (Ar) atmosphere. CH_3CN , 1,2-dichloroethane and dichloromethane were distilled from CaH_2 under argon (Ar) atmosphere. Commercially obtained reagents were used without further purification. All reactions were monitored by TLC with Huanghai GF254 silica gel coated plates. Flash column chromatography was carried out using 300-400 mesh silica gel at increased pressure. All β,γ -unsaturated α -ketoesters were prepared according to the literature.¹ The cinchona alkaloid derivatives catalysts were prepared according to the literature.²

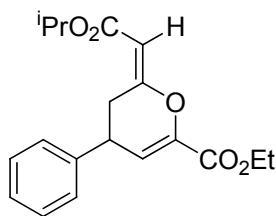

General Procedure and Data of Adducts 3

Under argon atmosphere, allenoates **2** (0.12 mmol) was added to a solution of β,γ -unsaturated α -ketoesters **1** (0.1 mmol), β -ICD (0.02 mmol) in fluoro benzene (3.0 mL) and stirred at -15°C or room temperature for 24 h. The solvent was removed under reduced pressure and residue was chromatographed on silica gel (elution with petroleum ether/EtOAc = 8:1-4:1) to provide compound **3**.
