

Liposome Surface Functionalization Based on Different Anchoring Lipids via Staudinger Ligation

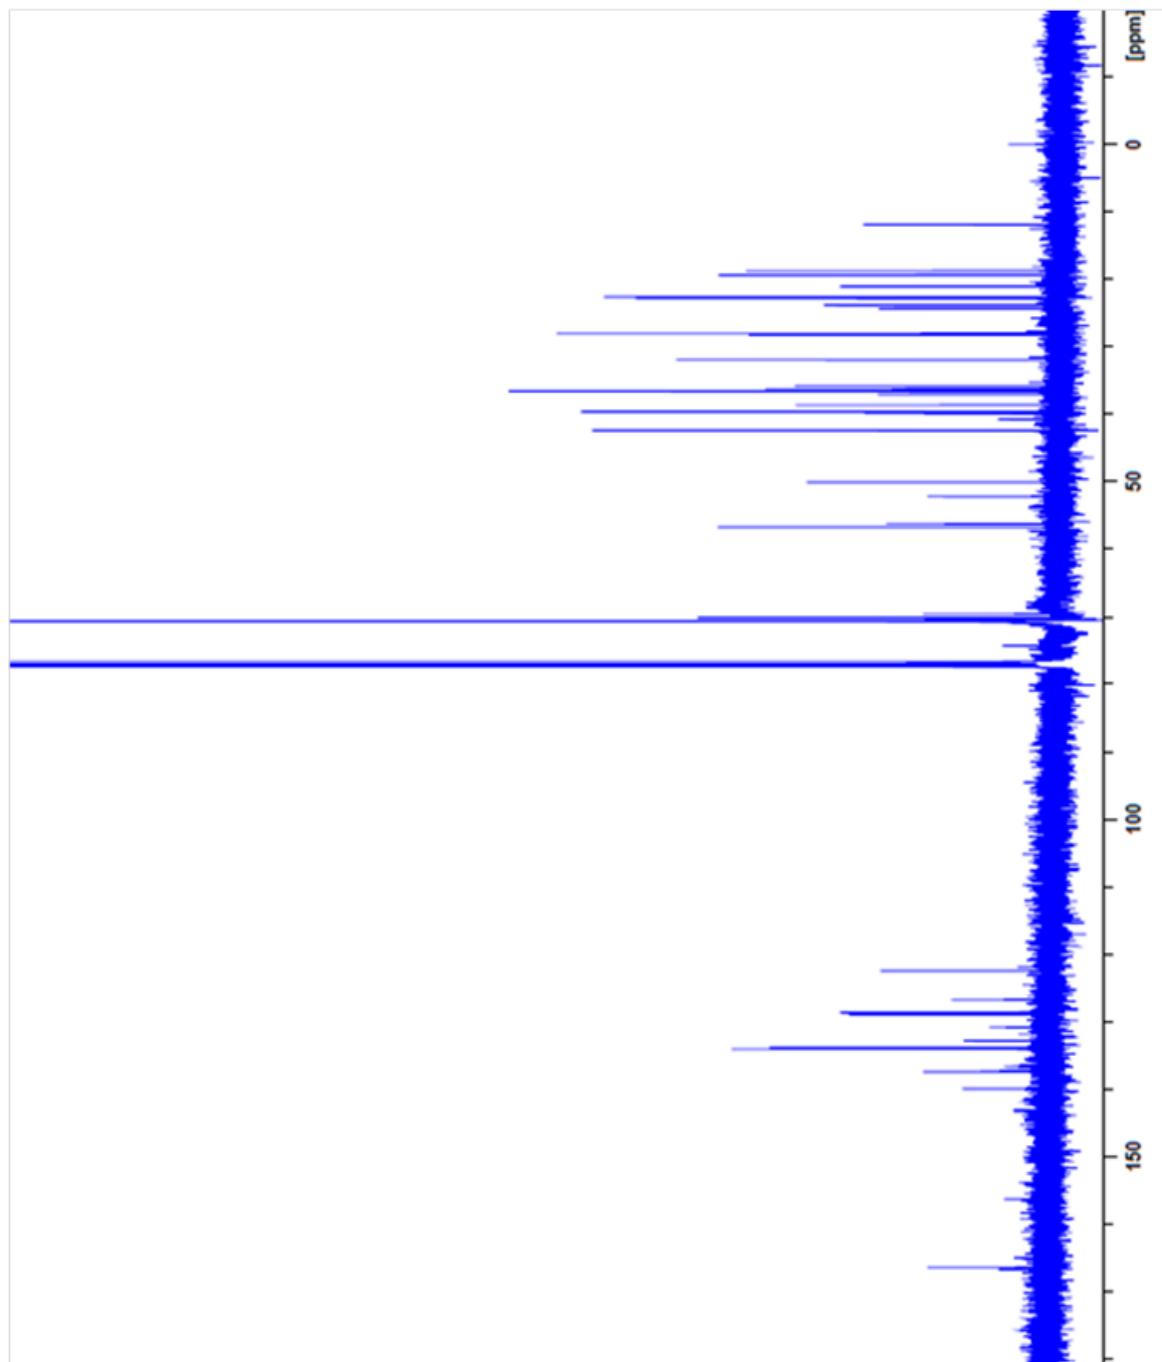

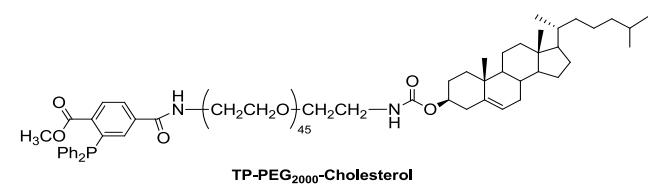

Pratima Vabbilisetty and Xue-Long Sun^{*}

Supporting Information

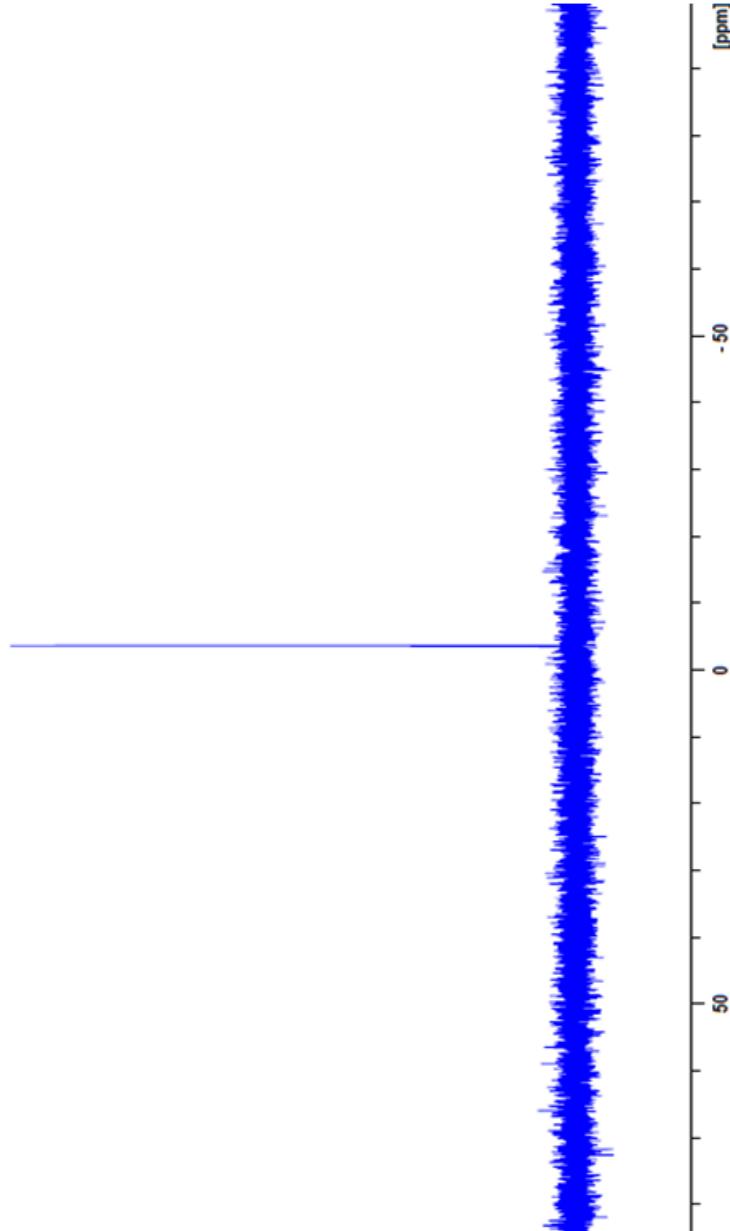

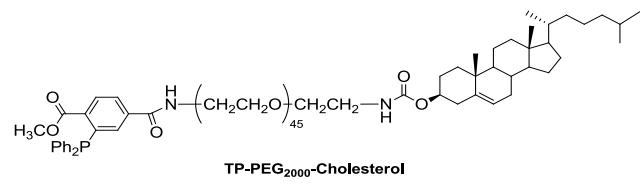

¹ H NMR spectrum of Cholesterol-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

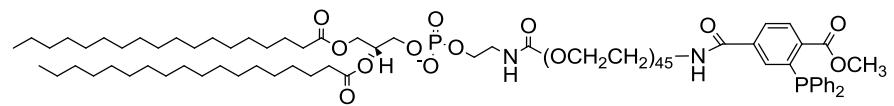

¹³ C NMR spectrum of Cholesterol-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

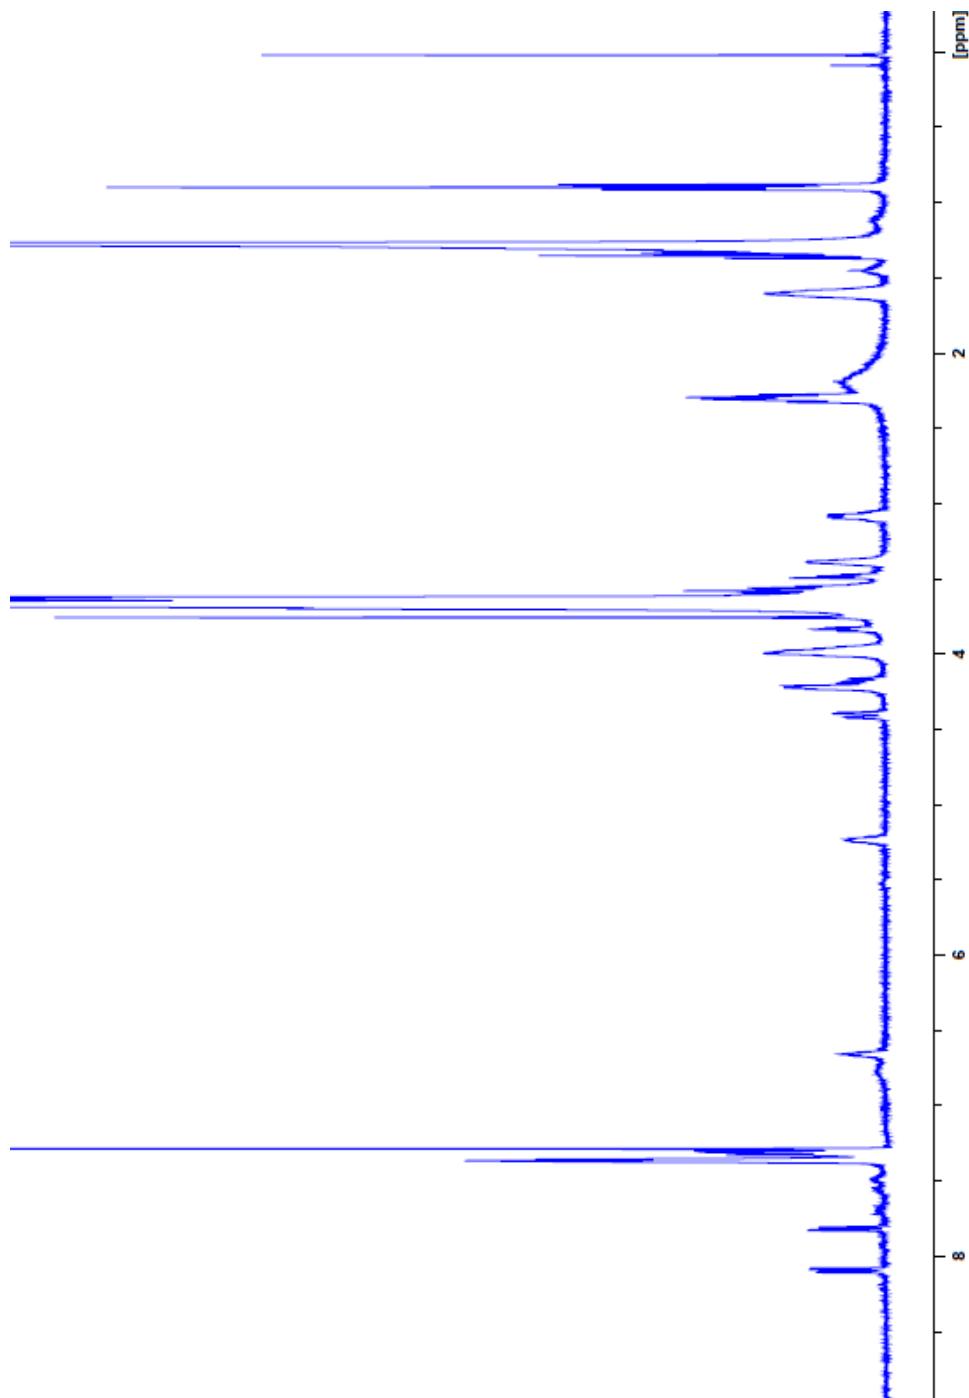

^{31}P NMR spectrum of Cholesterol-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

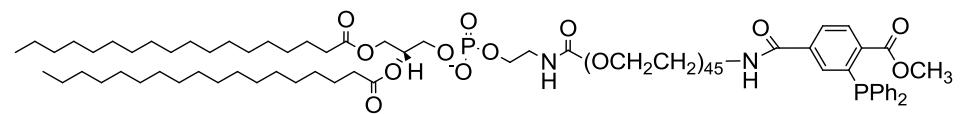

¹H NMR spectrum of DSPE-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

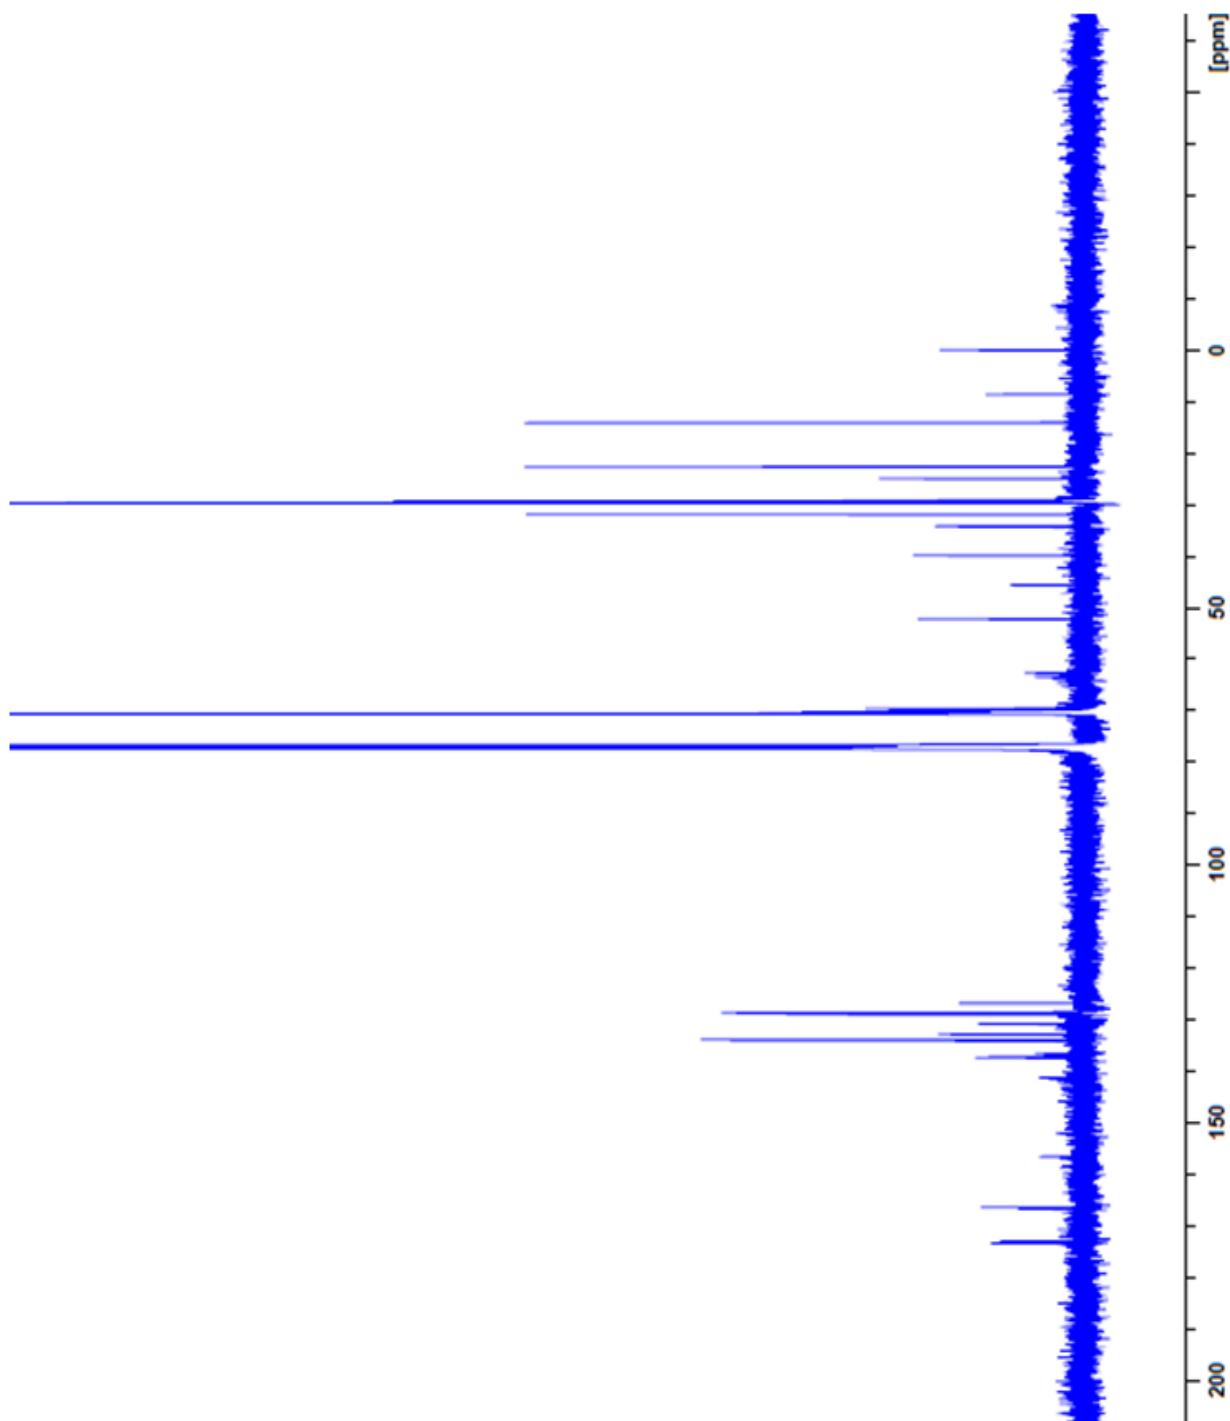

DSPE-PEG₂₀₀₀ - TP

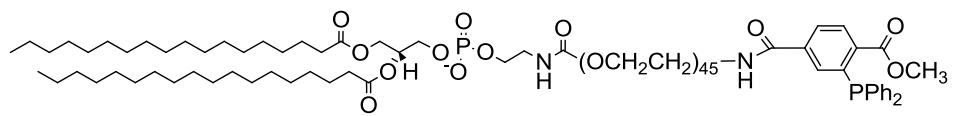

¹³C NMR spectrum of DSPE-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

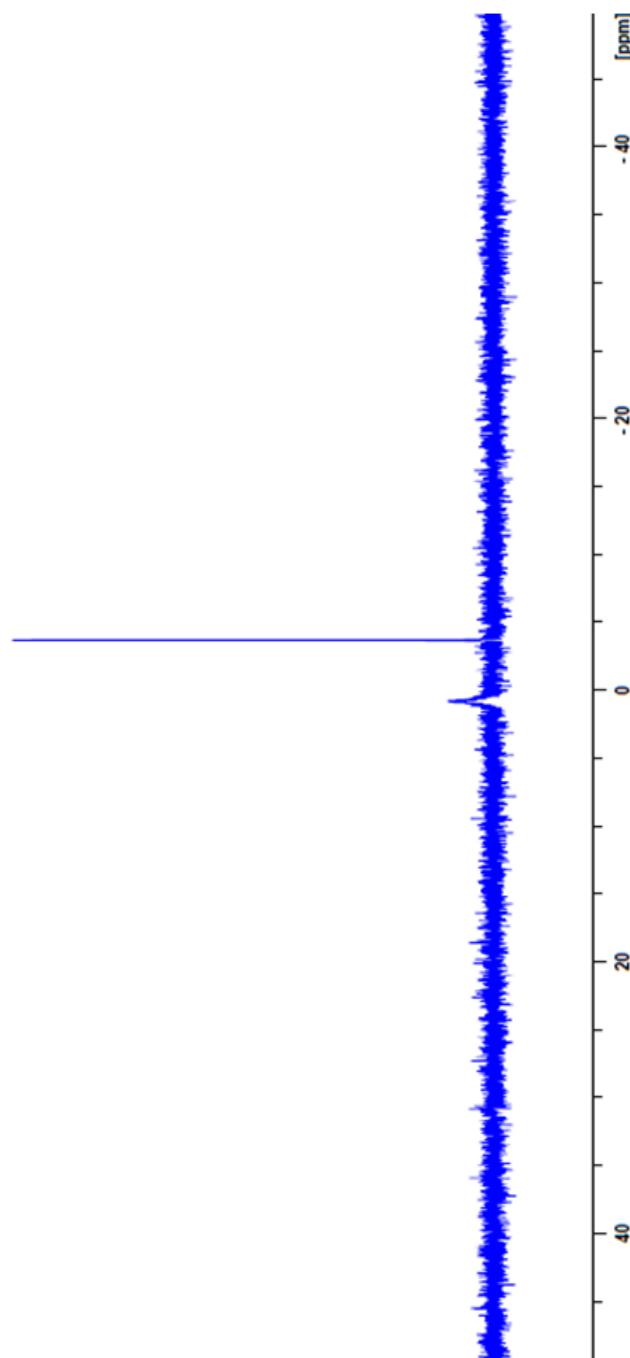

DSPE-PEG₂₀₀₀ - TP

³¹P NMR spectrum of DSPE-PEG₂₀₀₀ – TP conjugate (in CDCl₃)

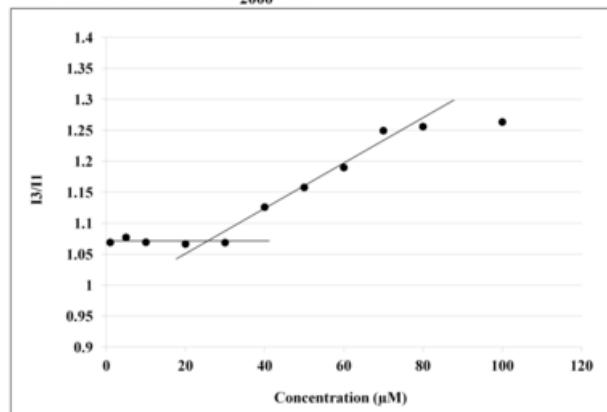

DSPE-PEG₂₀₀₀ - TP

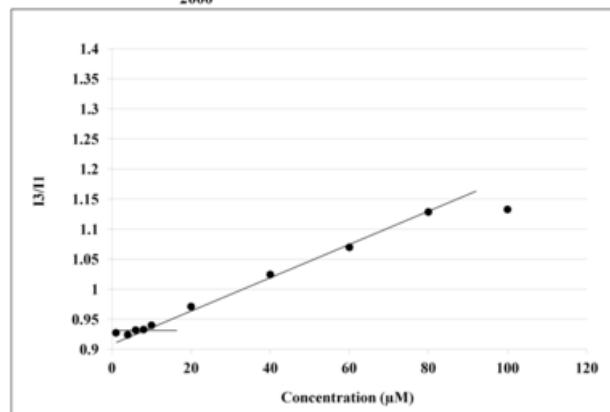

Measurement of critical micelle concentration (CMC) of anchor lipids before and after glyco-functionalization: Cholesterol – PEG₂₀₀₀ – TP (A) and DSPE-PEG₂₀₀₀-TP (B).

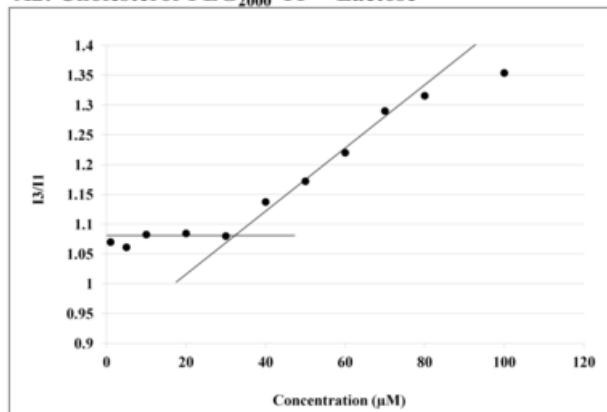

A1: Cholesterol-PEG₂₀₀₀-TP

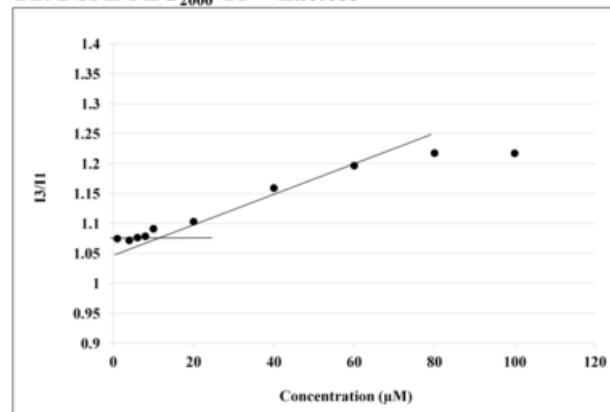

B1: DSPE-PEG₂₀₀₀-TP

A2: Cholesterol-PEG₂₀₀₀-TP + Lactose

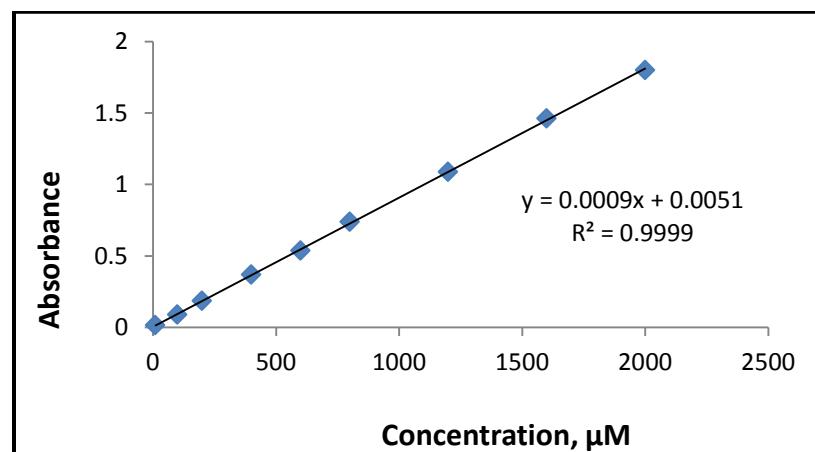

B2: DSPE-PEG₂₀₀₀-TP + Lactose

Determination of concentration of lactose on the liposome surface

Lactose assay calibration curve:

5, 6-Carboxyfluorescein dye leakage assay:

5, 6-CF calibration curve:
