Synthesis of 2,3-diphenyl-1,4-dioxene (2)

This olefin was synthesized following a procedure from the literature.¹ Briefly, 10.6 g (0.05 mol) of benzoin and 0.2 g of *para*-toluenesulfonic acid were heated under reflux with 125 ml of ethylene glycol for 20 h in a dry atmosphere using a calcium chloride tube. The solution was cooled, filtered and washed with an ethylene glycol/water mixture and then dried at low pressure. Yellowish crystals were obtained and TLC analysis showed only one spot, distinct from the substrate. The yield of the crude product was 28%, m.p. = 94-5°C.

IR (KBr, cm⁻¹): 3078, 3052 (aromatic C-H), 2981, 2925, 2878 (C-H), 1634 (C=C), 1598 (aromatic C=C), 1287, 1258 (C-O-C=), 759 e 693 (monosubstituted aromatic ring).
RMN ¹H (CDCl₃) δ (ppm): 7.33 (m, 10H), 4.4 (s, 4H).

Synthesis of the diphenyldihydrodioxin 3

The synthesis of **3** was already described in the literature.² Briefly: β-lapachone (1 mmol) was dissolved in benzene (20 mL) and 2.5 mmol of 2,3-diphenyl-1,4-dioxene was added. After deoxygenating with N₂, the tubes were irradiated with a 500 W Hg lamp. This mixture was filtered under reduced pressure, the colorless solid was collected and recrystallized from ethanol; m.p.: 209–211 °C, yield 69%. Spectra (IR, MS, ¹H NMR and ¹³C NMR) for this compound are shown in Supporting Information (Figures 1S-4S).

UV (acetonitrile, λ_{max} nm (ε, Lmol⁻¹cm⁻¹): 212 (3.9x10⁴), 245.5 (3.08x10⁴), and a broad band from 270 to 360 nm, with maximum at 317 (5.8x10³) (Figure 5S)

IR (KBr) (cm^{-1}): 3065.4, 2972.7, 2935.9, 1646.2, 1586.0, 1495.4, 1450.1, 1413.3, 1389.4, 1326.2, 1264.9, 1240.4, 1180.6, 1160.1, 1105.0, 1068.7, 1042.0, 1018.4, 953.3, 914.2, 854.2, 765.1, 725.9.

MS m/z (abundance): 480 (<1%), 238 (11%), 214 (1%), 199 (1%), 181 (1%), 159 (1%), 130(1%), 105 (100%), 77 (17%), 51 (2%).

HRMS: m/z 480.2020 (theoretical 480.2036)

^1H NMR (CDCl_3) δ (ppm): 8.16 (1H, m); 8.12 (1H, m); 7.77–7.68 (4H, m); 7.44 (1H, dt, $J = 7.02$ and 1.36 Hz); 7.32 (1H, dt, $J = 6.20$ and 1.36 Hz); 7.24–7.18 (6H, m); 4.34–4.14 (2H, m); 3.96–3.89 (2H, m); 3.02–2.76 (2H, m), 1.87 (2H, $J = 6.48$ and 1.62 Hz); 1.42 (3H, s); 1.38 (3H, s).

^{13}C NMR (CDCl_3) δ (ppm): 17.39; 26.63; 26.82; 32.09; 61.41; 61.78; 74.03; 94.43; 95.10; 106.6; 119.75; 121.54; 123.27; 123.99; 125.57; 127.27; 127.67; 128.52; 134.46; 137.46; 137.79; 144.10.
