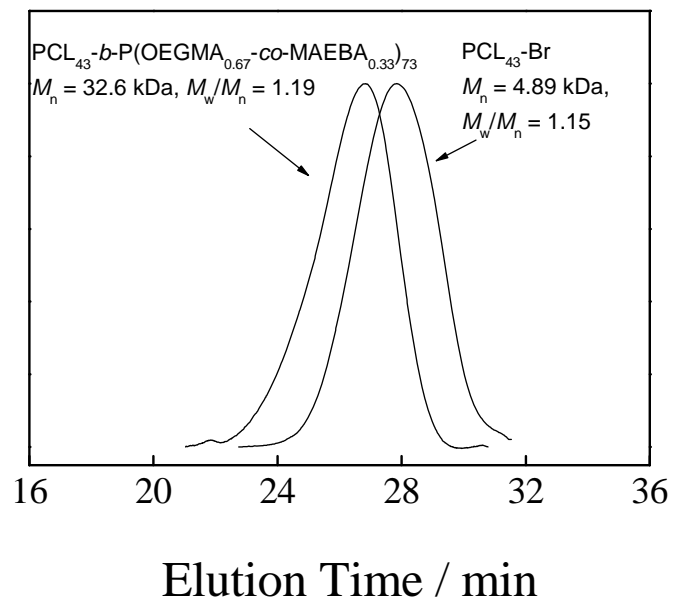

Fig. S1. DMF GPC traces recorded for $\text{PCL}_{43}\text{-Br}$ and $\text{PCL}_{43}\text{-}b\text{-P(OEGMA}_{0.67}\text{-co-MAEBA}_{0.33})_{73}$ diblock copolymer.

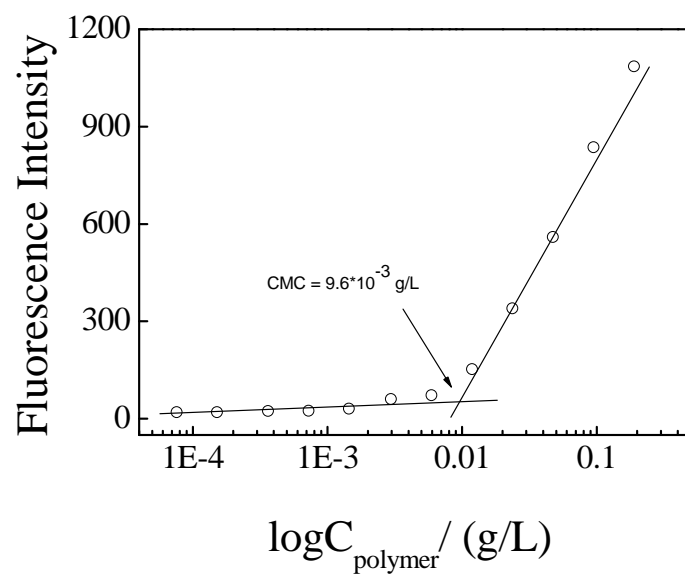

Fig. S2. Plot of emission intensity of Nile red at the emission maxima 615 nm ($\lambda_{\text{ex}} = 550$ nm; slit widths: Ex. 5 nm, Em. 5 nm) as a function of concentration of PCL₄₃-*b*-P(OEGMA_{0.67}-*co*-MAEBA_{0.33})₇₃ diblock copolymer. Nile red concentration was fixed to be 1.0×10^{-6} M.

Fig. S3. Time dependence of relative light scattering intensities recorded for 0.05 g/L aqueous solution of (○) Non-crosslinked (NCL) micelles and (□) Shell cross-linked (SCL) micelles fabricated from $\text{PCL}_{43}\text{-}b\text{-P}(\text{OEGMA}_{0.67}\text{-}co\text{-MAEBA}_{0.33})_{73}$ diblock copolymer upon treating with 0.1 g/L lipase at 37 °C.
