Atom Transfer Radical Polymerization of Methyl Methacrylate with Thermo-Responsive Ligand: Construction of Thermoregulated Phase-Transfer Catalysis in Aqueous/Organic Biphasic System

Jinlong Pan, Lifen Zhang, Liangjiu Bai, Zhengbiao Zhang, Hong Chen, Zhenping Cheng* and Xiulin Zhu*

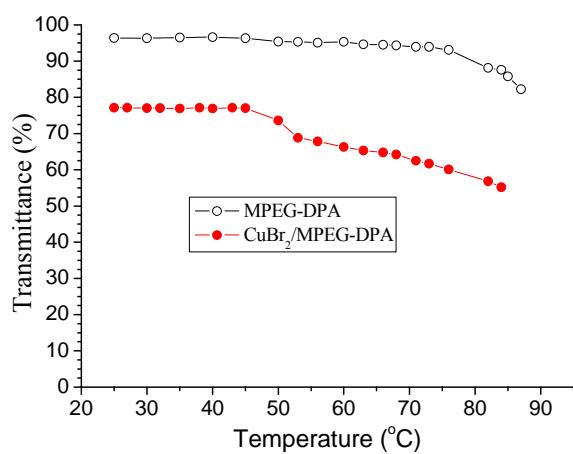

Figure S1. Transmittance-temperature curves of the thermo-responsive monofunctional ligand *N*-methoxypoly(ethylene glycol)-2,2'-dipyridylamine (MPEG-DPA) and its Cu(II) complex in water.

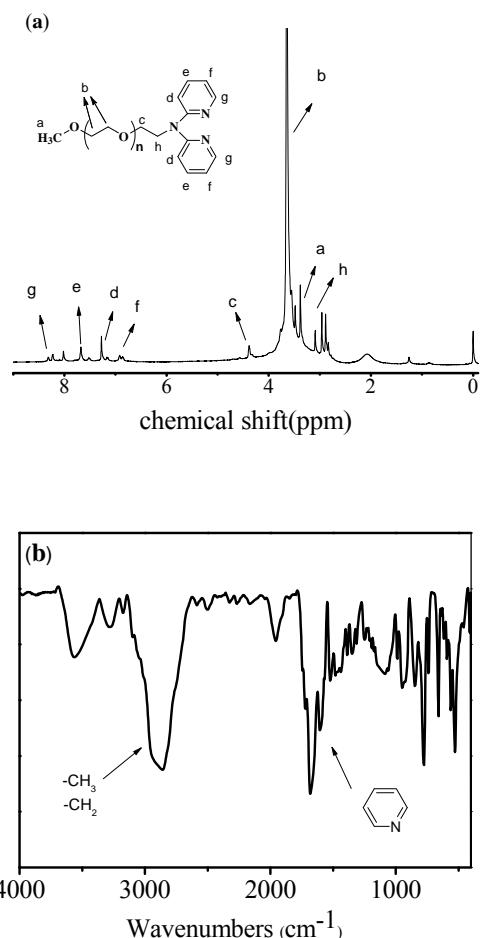

Figure S2. ¹H NMR (CDCl_3 as the solvent and TMS as the internal standard) (a) and FT-IR (b) spectra of thermo-responsive monofunctional ligand *N*-methoxypoly(ethylene glycol)-2,2'-dipyridylamine (MPEG-DPA).
