## Supporting Information

Figure S1 : Power Spectral Density analysis of the AFM phase image of a deposit of P3HT- $b$-P(AcET-co-PEGET) from a $\mathrm{CHCl}_{3} / \mathrm{DMF}$ (50/50) solution (Figure 2d of the main text). The peak in the frequency plot (cyan vertical line) corresponds to a length of 19 nm (see cyan-highlighted box), which is interpreted as the size of the objects in the image.

Figure S2: Power Spectral Density analysis of the AFM phase image of a deposit of P3HT-b-P(AcET-co-PEGET) from a $\mathrm{CHCl}_{3} / \mathrm{DMF}$ (50/50) solution (Figure 5c of the main text). The peak in the frequency plot (cyan vertical line) corresponds to a length of 40 nm (see cyan-highlighted
