Electronic Supplementary Material (ESI) for Polymer Chemistry. This journal is © The Royal Society of Chemistry 2014

## Journal Name

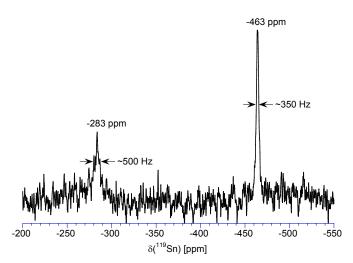

## **RSCPublishing**

## ARTICLE

**Supplementary Information:** 

## Nano-Building Blocks based-Hybrid organic-inorganic copolymers with Self-Healing Properties.

F. Potier, *a,b,c*, A. Guinault, *d* S. Delalande, *e* C. Sanchez, *a,b,c* F. Ribot *a,b,c* and L. Rozes *a,b,c* \*,

**Figure S11.** <sup>119</sup>Sn-(<sup>1</sup>H) NMR spectrum (111.9 MHz) of a piece of poly(n-butyl acrylate-co-[(BuSn)<sub>12</sub>O<sub>14</sub>(OH)<sub>6</sub>](AMPS)<sub>2</sub>) swollen by CDCl<sub>3</sub>. Despite the recording of 32768 transients (~2h20"), the signal to noise ratio remains low because of the very low amount of tin oxo-cluster, ca. 3 mg, in the observed volume of the 5 mm tube.
