### Table of Contents

1. Physical measurements	S2
2. Crystallographic data	S2
3. Selected coordination bond lengths and coordination angles	S3
4. Fe K-edge XAS spectra before and after visible-light-irradiation at 808 nm at 15 K.	S5
5. XAS spectra before and after visible-light irradiation at 808 nm at 100 K.	S5

## Physical measurements

### Crystal structural analyses

A single crystal of **1** was mounted on the top of a glass capillary coated with apiezon grease. Diffraction data were collected at 24 K using a Bruker SMART APEX II diffractometer equipped with a CCD type area detector. A full sphere of data was collected with graphite-monochromated Mo-K $\alpha$  radiation ( $\lambda = 0.71073$  Å). The data frames were integrated using the SAINT program and merged to give a unique data set for structure determination. An absorption correction was performed using SADABS.<sup>1</sup> The structure was solved by direct methods and refined on  $F^2$  by the full-matrix least-squares methods using SHELXTL package (Bruker Analytical X-ray systems). Non hydrogen atoms were refined with anisotropic thermal parameters. Hydrogen atoms were included in calculated positions and refined with isotropic thermal parameters riding on those of the parent atoms. Crystallographic parameters for **1** before and after light irradiation are summarized in Table S1.

### XAS measurements

A single crystal of **1** coated with apiezon grease was mounted on the top of glass capillary and was fixed using epoxy resin. The XAS measurements were conducted at BL-8A at the Photon Factory, KEK, Tsukuba. The spectra were measured by the fluorescence method, in which the intensity of fluorescent X-rays from the sample was detected by a silicon drift detector (SDD) and the X-ray energy was calibrated using standard Fe foil.<sup>2</sup>

**Table S1.** Crystallographic parameters of **1**

	24 K <sup>[a]</sup>		24 K <sup>[b]</sup>	
	before 808 nm irradiation		after 808 nm irradiation	
Formula	C <sub>110</sub> H <sub>148</sub> B <sub>2</sub> Co <sub>2</sub> F <sub>12</sub> Fe <sub>2</sub> N <sub>26</sub> O <sub>2</sub> P <sub>2</sub>			
Mr [g mol <sup>-1</sup> ]	1.299		1.214	
Space group	Monoclinic <i>C2/c</i>		Monoclinic <i>C2/c</i>	
<i>a</i> [Å]	24.682(4)		24.56(3)	
<i>b</i> [Å]	18.626(3)		19.67(2)
