## EXPERIMENTAL SECTION

Reactions and manipulations involving organometallic or moisture sensitive compounds were carried out under dry nitrogen and glassware heated under oven for two hours prior to use. NMR spectra were recorded on 500 MHz spectrometers for <sup>1</sup>H NMR and 125 or 100 MHz spectrometer for <sup>13</sup>C NMR with deuterated chloroform (CDCl<sub>3</sub>) as solvent at 298 K. HRMS were obtained with a TOF MS spectrometer. Melting points were uncorrected. Anhydrous THF, toluene, ether were freshly distilled over Na and benzophenone. Anhydrous CH<sub>2</sub>ClCH<sub>2</sub>Cl, CH<sub>2</sub>Cl<sub>2</sub>, CH<sub>3</sub>CN were freshly distilled over calcium hydride. Commercial reagents were used as received without further purification unless otherwise noticed. Column chromatography was carried out using silica gel (200-300 mesh). The pyridyl-substituted alkynyl ketones ketones **1** was synthesis according to the reference.<sup>1</sup>

**General Procedure for the Synthesis of 2-(2-Enynyl)pyridine **3**.** To a solution of the benzyl bromide ylide (1.2 eq.) in dry THF (50) at 0 °C, *n*-butyllithium (1.2 eq.) was added dropwise by syringe over 5 minutes. The white solution gradually turn to orange. After 10 min, pyridyl-substituted alkynyl ketones **1** (1.0 eq.) was added to the solution, after the reaction was over, the mixture was poured into water and extracted with EtOAc (3 x 20 mL). The combines organic phase was dried over MgSO<sub>4</sub> and filtered. The solvent was removed under vacuum and the residue was purified by flash chromatography on silica gel, eluting with ethyl acetate/petroleum ether 1:10 (v/v) to afford the 2-(2-enynyl)pyridine **3**.
