1. Dynamic light scattering (DLS) characterization of NPs and NPs-AlPcS₄ in water-phase

In Fig. S1, the DLS result showed that the size of NPs and NPs-AlPcS₄ in water-phase was about 123 and 138 nm, respectively.

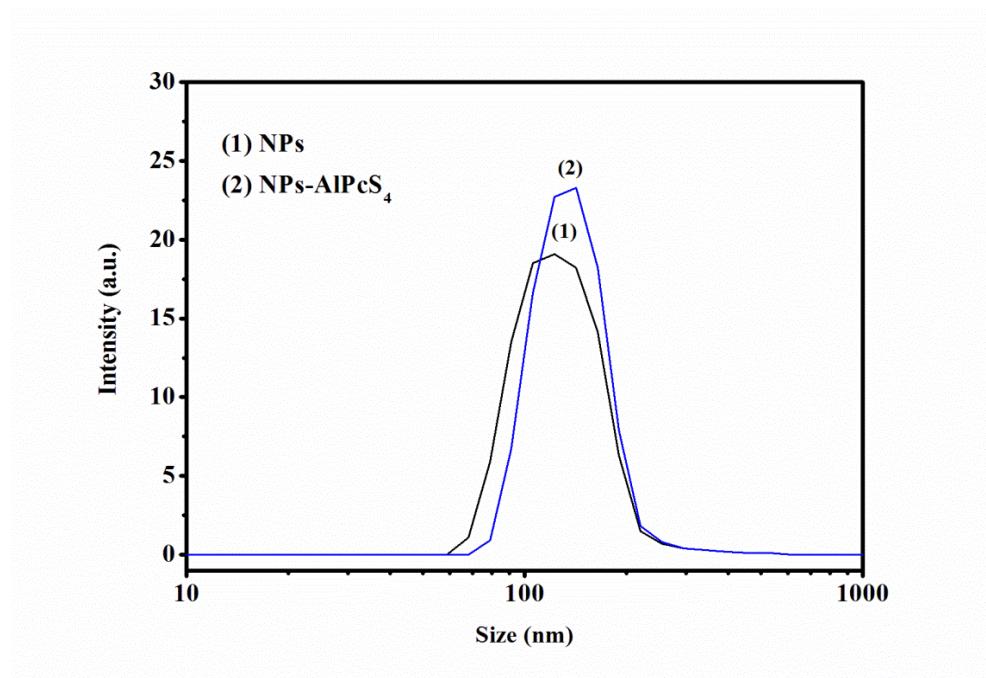

Fig. S1 Size distribution of NPs and NPs-AlPcS₄ in water-phase

2. Zeta potential distribution of NPs and NPs-AlPcS₄ in water-phase

In Fig. S2, the zeta potential distribution showed that the zeta potential of NPs and NPs-AlPcS₄ in water-phase was 37.1 mV and 35.1 mV, respectively.

3. Magnetic characterization of NPs dispersed in hexane and water-phase

The M-H showed that the saturation magnetization of nanoparticles was 16.60 and 15.89 emu/g, respectively, before and after they were transferred into water-phase.

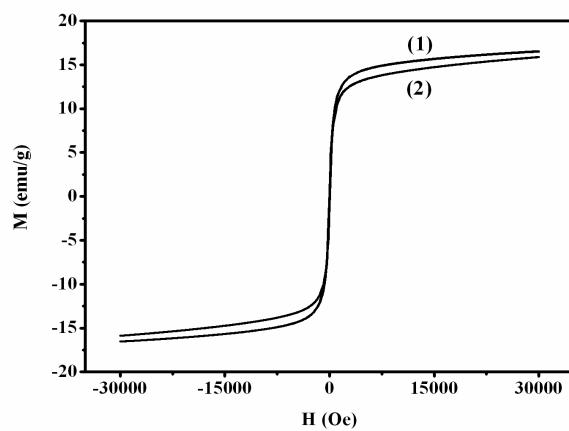

Fig. S3 M-H curve of $\text{Fe}_3\text{O}_4\text{-NaYF}_4\text{:Yb/Er}$ nanoparticles before (1) and after (2) they were transferred from hexane into water-phase.
