

Supplementary

Table A1. The basic properties of the anion exchange membrane (AHA, Astom. Japan).

Type	Strongly basic anion permeable
Characteristics	High mechanical strength, base resistant (Cl-form)
Electric resistance	$4.1 \Omega\text{-cm}^2$ , 25 °C
Burst strength	$\geq 0.90 \text{ MPa}$
Thickness	0.22 mm

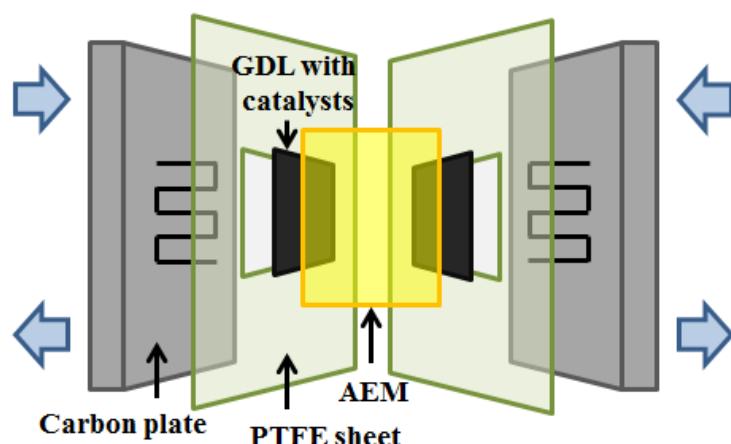

Fig. A1 Schematic diagram of the single cell

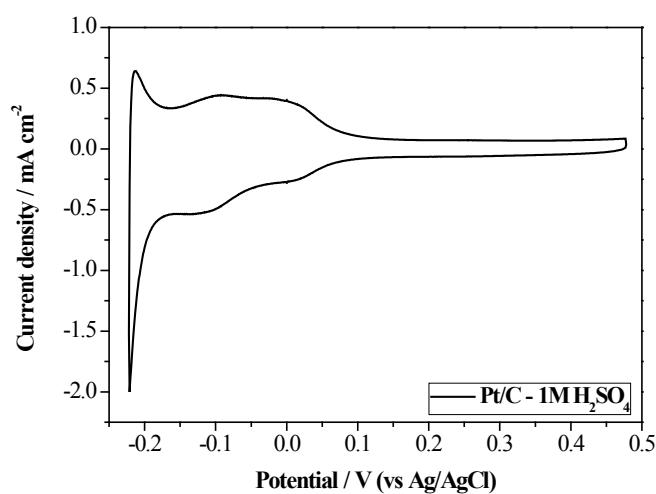

Fig. A2 Cyclic voltammogram of Pt/C in 1M H<sub>2</sub>SO<sub>4</sub> solution at scan rate 15 mV sec<sup>-1</sup>.

Calculation of electrochemical active surface area (EAS)

Proton adsorption/desorption area of Pt/C was achieved from potential range between -0.22 V ~ 0.1 V

(vs Ag/AgCl). To remove effect of capacitance, area corresponding to current density at 0.1 V was removed.  
EAS of Pt/C is  $17.2 \text{ m}^2 \text{ g}_{\text{catal}}$ .

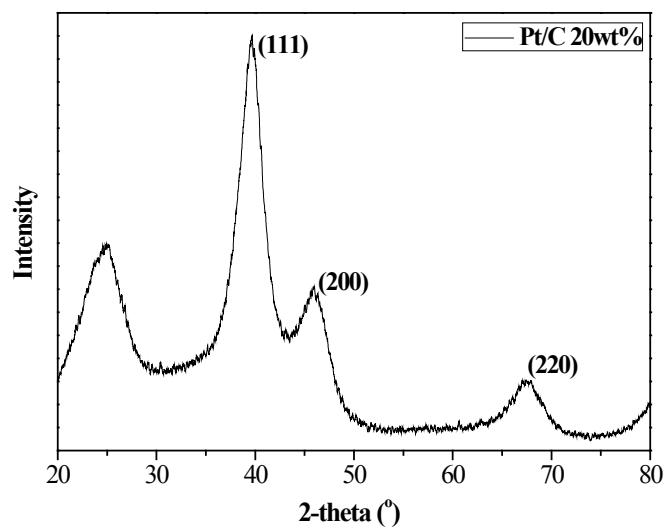

Fig. A3 XRD result of Pt/C

XRD pattern of Pt/C was characterized using CuK $\alpha$  radiation (XRD, D/MAX-IIIC diffractometer, Rigaku Co.).
