## General Information

All materials used in this study were obtained from commercial supplier and used without further purification as received. All reactions were carried out in an open atmosphere of air. All  $^1\text{H}$  and  $^{13}\text{C}$  NMR spectra were recorded in DMSO  $d_6$  on Avance 300 MHz/Inova 500 MHz spectrometers. Chemical shifts ( $\delta$ ) are reported in parts per million (ppm) relative to either residual TMS ( $^1\text{H}$ :  $\delta$  0.00 ppm,  $^{13}\text{C}$ :  $\delta$  00.00 ppm) or DMSO  $d_6$  ( $^1\text{H}$ :  $\delta$  2.50 ppm,  $^{13}\text{C}$ :  $\delta$  39.43 ppm) as an internal reference. The number of protons ( $n$ ) for a given resonance is indicated by  $n\text{H}$ . Coupling constants ( $J$ ) are reported in Hertz (Hz). Peak multiplicity is indicated as follows: s—singlet, d—doublet, t—triplet, q—quartet, br—broad, m—multiplet, dd—doublet of doublet dt—triplet of doublet and br s —broad singlet. Melting points were measured on a BUCHI melting point machine. IR spectra were recorded on Thermo Nicolet FT/IR-5700 spectrometer. Mass spectra were recorded using Waters mass spectrometers. High resolution mass spectrums (HRMS) were recorded using Applied Bio-Sciences HRMS spectrometer at national center for mass spectroscopy-IICT.

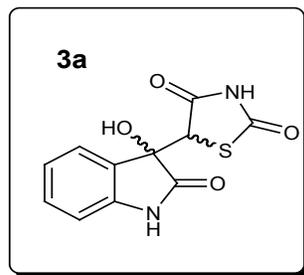

### **General procedure for synthesis of 3-(thiazolidinedione derivatives) substituted, 3-hydroxy-2-oxindole frameworks:**

Mixture of isatin **1(a-n)** (1.0 mmol) and thiazolidinedione derivatives **2(a-c)** (1 mmol) was stirred in 5 mL tap water at room temperature for stipulated time (12 h). The progress of the reaction was monitored by TLC as well as by the visualization of the change of color of the reaction mixture from red (at the begning of the reaction) to white (at the end of the reaction). The obtained thick white precipitate was filtered and dried to afford the desired product **3(a-x)** in very good yield and purity. All products **3(a-x)** were characterized by NMR, Mass and IR spectroscopic techniques.

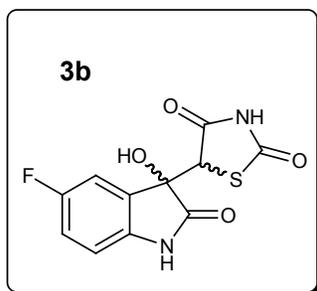

### **General procedure for synthesis of 3-(oxindole derivatives) substituted, 3-hydroxy-2-oxindole frameworks:**

Mixture of isatin **1(a-i)** (1.0 mmol) and oxindole derivatives **4(a-c)** (1 mmol) was stirred in 5 mL tap water at room temperature for stipulated time (24 h). The progress of reaction was monitored by TLC as well as by the visualisation of the change of colour of reaction mixture from red (at the begning of the reaction) to white (at the end of the reaction). The obtained thick white precipitate was filtered and dried to afford the desired product **5(a-t)** in very good yield and purity. All products **3(a-x)** were characterized by NMR, Mass and IR spectroscopic techniques.
