

Electronic supplementary information (ESI)

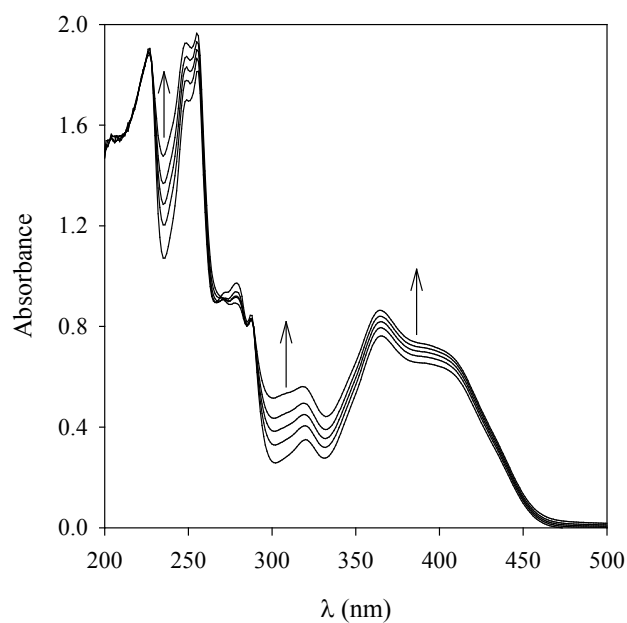

Figure S1. Time evolution of the absorption spectra of air-equilibrated solutions (pH 5.5) of Trp (100 μM) and PN ($A(350 \text{ nm}) = 0.5$) exposed to UV-A irradiation. Spectra were recorded at 0, 1, 2, 3 and 5 min; optical pathlength 1 cm. Arrows indicate the changes observed at different wavelengths.
