

Fig.S1

Fig.S1 Comparison of yeast cell viability under different temperature. Fermentation conditions: 3.5 g D-glucose, approximately 5×10^8 cells mL^{-1} , 8mL H_2O , 2.0g of PEG-400, 72 h, 160 rpm, and pH of 3.9. All data and error bars represent the averages and standard deviations of triplicate measurements.
