1. Materials and methods

Phthalimide potassium, hydrazine hydrate, and 3,5-bis(trifluoromethyl)phenyl isocyanate were reagent grade and used as received. The 1-(10-bromodecyloxy)-4-methoxybenzene^{S1} and copillar[5]arene **1**^{S2} were synthesized according to literature procedures. Solvents were either employed as purchased or dried according to procedures described in the literature. ¹H NMR spectra were collected on a Varian Unity INOVA-400 spectrometer with internal standard TMS. ¹³C NMR spectra were recorded on a Varian Unity INOVA-400 spectrometry at 100 MHz. ESI mass spectrometry were performed on a Bruker Esquire 3000 plus mass spectrometer (Bruker-Franzen Analytik GmbH Bremen, Germany) equipped with an ESI interface and an ion trap analyzer. HRMS were obtained on a Bruker 7-Tesla FT-ICRMS equipped with an electrospray source (Billerica, MA, USA) or on a WATERS GCT Premier (USA). MALDI-TOF spectrometry was performed on a 4700 MALDI-TOF-TOF (Applied Biosystems, U.S.A). The melting points were collected on a SHPSIC WRS-2 automatic melting point apparatus.

3. Synthesis of 2

A mixture of copillar[5]arene **1**^{S2} (0.95 g, 1.0 mmol) and phthalimide potassium (0.21 g, 1.1 mmol) in 50 mL of DMF was stirred at 90 °C for 24 h under nitrogen atmosphere. Then DMF was removed by rotary evaporation. The resulting oil was dissolved in THF (30 mL), methanol (3 mL) and hydrazine hydrate (3 mL). After stirred at 50 °C for 24 h, the reaction mixture was concentrated by rotary evaporation. The resulting residue was dissolved in CH₂Cl₂ (150 mL) and washed with H₂O (2 × 100 mL). The organic layer was dried over anhydrous Na₂SO₄ and evaporated to afford the crude product, which was isolated by flash column chromatography using dichloromethane/methanol (20:1). The fractions containing the product were combined and concentrated under vacuum to give copillar[5]arene **2** (0.62 g, 69%) as a white solid. Mp 140.4–140.9 °C. The proton NMR spectrum of **2** is shown in Fig. S2. ¹H NMR (400 MHz, chloroform-*d*, 25 °C) δ (ppm): 6.96–6.79 (m, 10H), 3.91 (t, *J* = 6.4 Hz, 2H), 3.85–3.63 (m, 37H), 1.91–1.81 (m, 2H), 1.60–1.49 (m, 2H), 1.42–1.32 (m, 2H), 1.31–1.15 (m, 4H), 0.97–0.81 (m, 2H), 0.58–0.39 (m, 2H), –0.43 (s, 2H), –0.57 (s, 2H).
