

SUPPORTING INFORMATION

Asymmetric Lipid Bilayer Sandwiched in Polyelectrolyte Multilayer Films through Layer-by-Layer Assembly

Jiangshan Chen, Ralf Köhler, Thomas Gutberlet, Helmuth Möhwald and Rumen Krastev

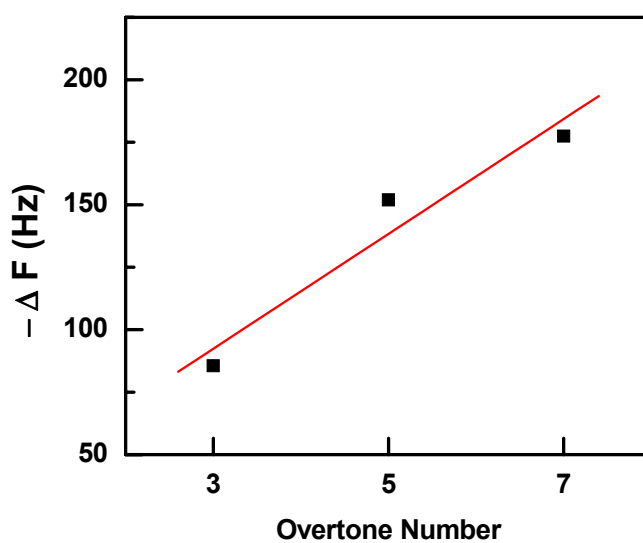

Figure S1 QCM frequency change at deposition of DMPE on PDADMAC terminated PEM at different overtones.

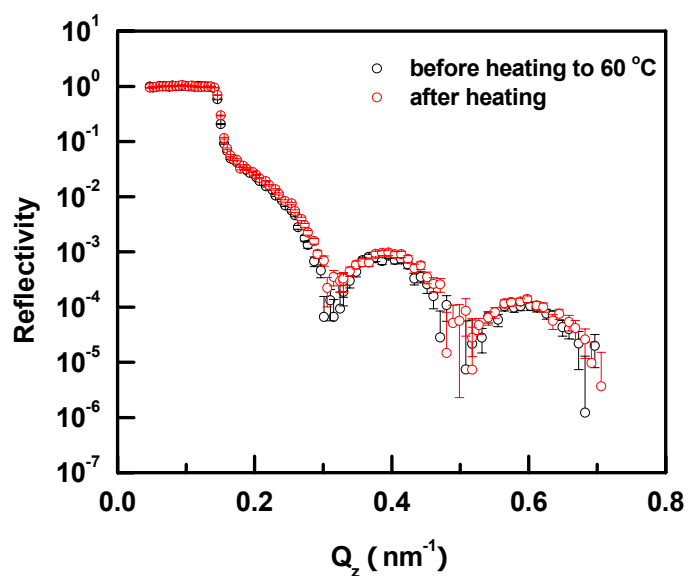

Figure S2. Neutron reflectometry curves from a sample with structure Si/PEI/(PSS/PAH)₆ before and after temperature treatment at 60 °C for 1 hour. No difference in the reflectivity at room temperature was observed before and after the temperature treatment. The result proves that no changes occurred in the sample after the treatment.
