Electronic Supplementary Material (ESI) for Journal of Materials Chemistry A

Fast synthesis of carbon microspheres via microwave-assisted reaction for sodium ion batteries

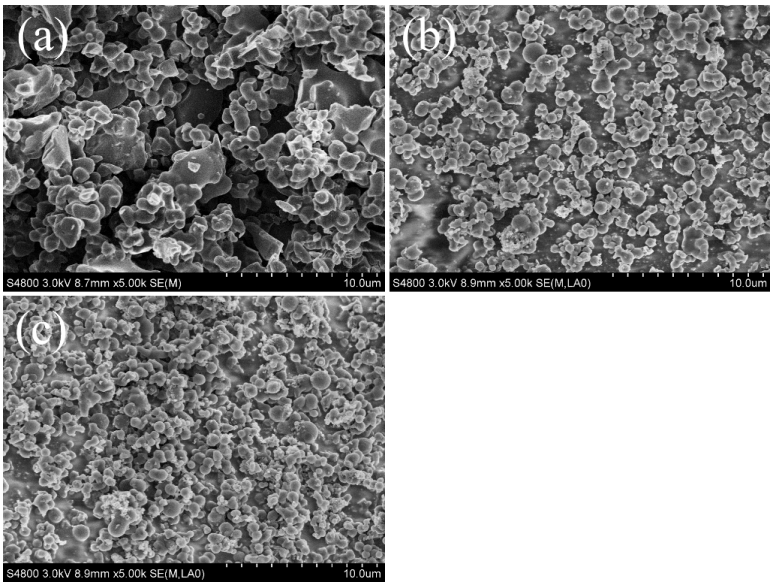

Figure S1 FESEM images of (a) CS300, (b) CS700 and (c) CS1000. These materials have a spherical structure similar to that of CS500.

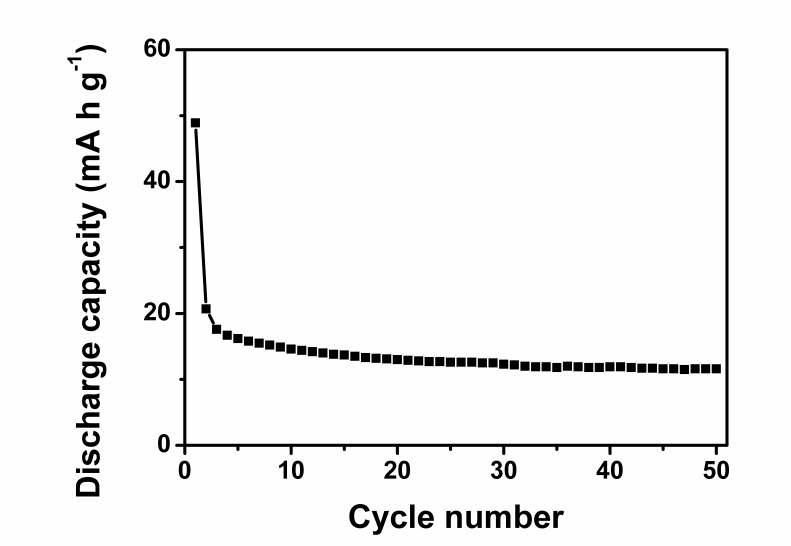

Figure S2 Cycle performance of CS300. CS300 delivers an initial discharge capacity of 49 mA h g^{-1} and maintains 12 mA h g^{-1} after 50 cycles, showing poor electrochemical performance.
