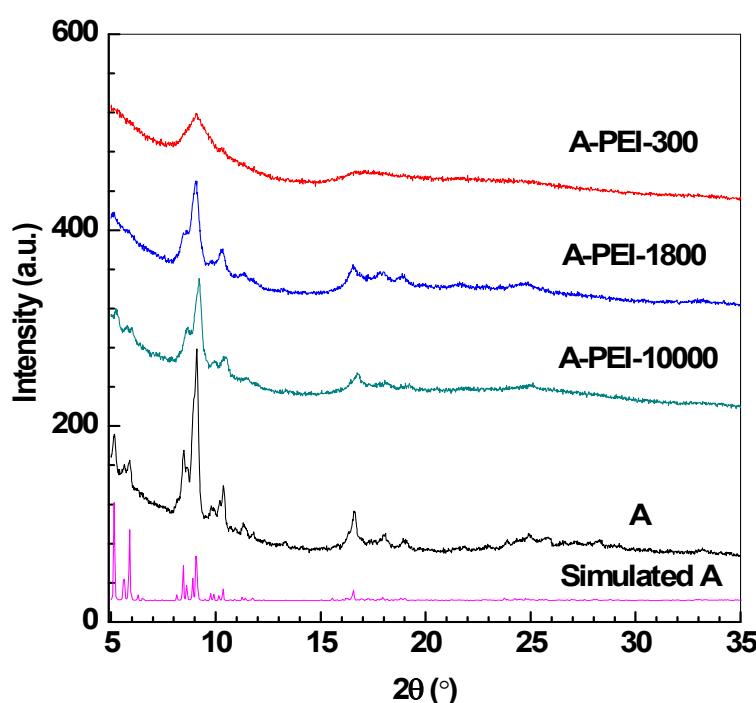

Figure S1. Powder XRD patterns of A before and after loading PEI, and simulated XRD patterns of A.

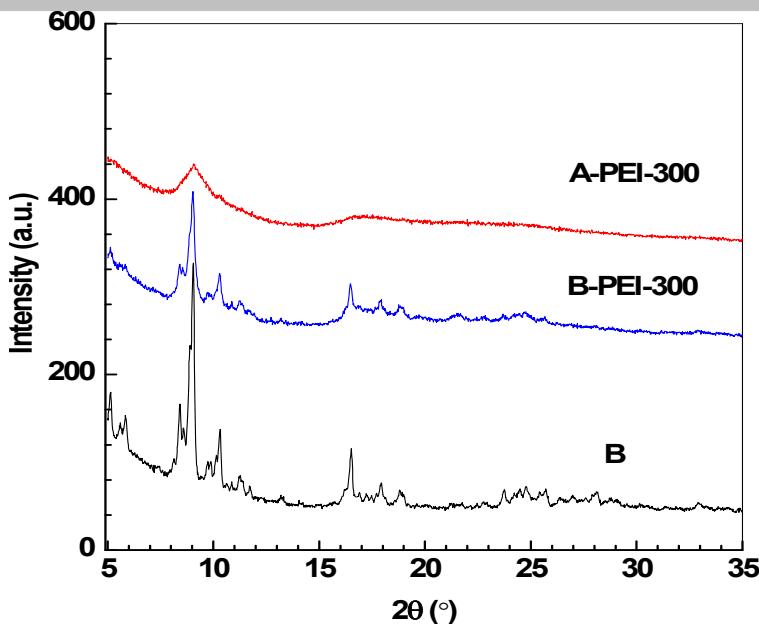

Figure S2. Powder XRD patterns of sample B before and after loading PEI, and XRD patterns of A-PEI-300.

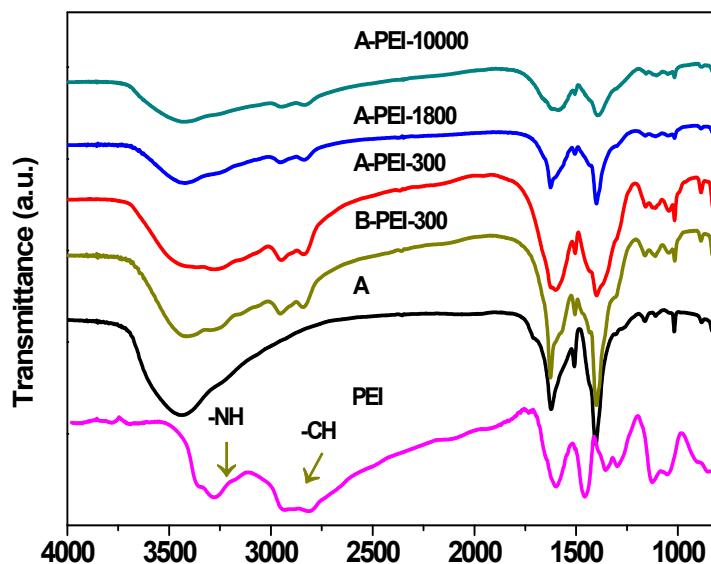

Figure S3. IR spectra of PEI, A, A-PEI-300, A-PEI-1800, B-PEI-10000 and B-PEI-300.

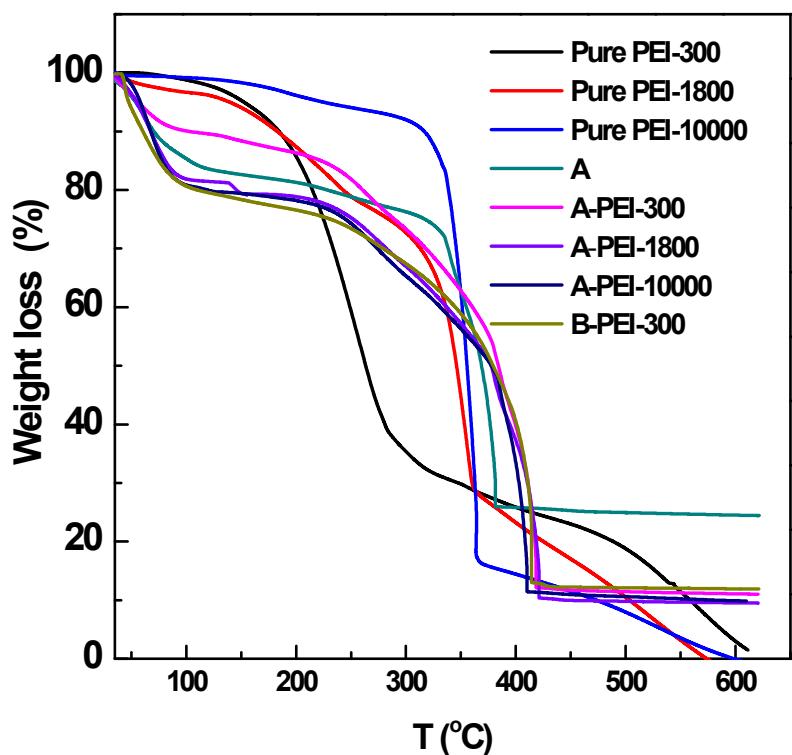

Figure S4. Weight loss curves of the pure PEI and MIL-101(Cr) before and after loading PEI.

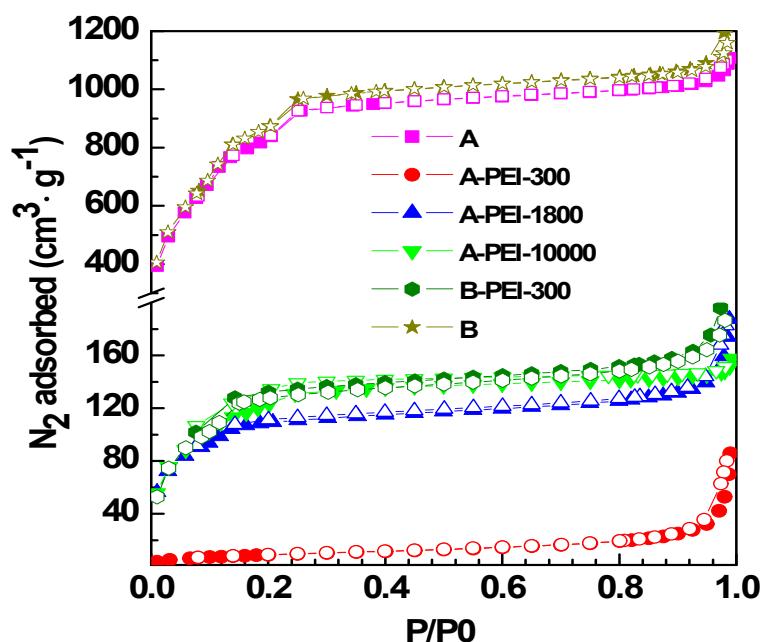

Figure S5. N_2 adsorption/desorption isotherms at 77 K. The symbols: Filled, adsorption; Blank, desorption.

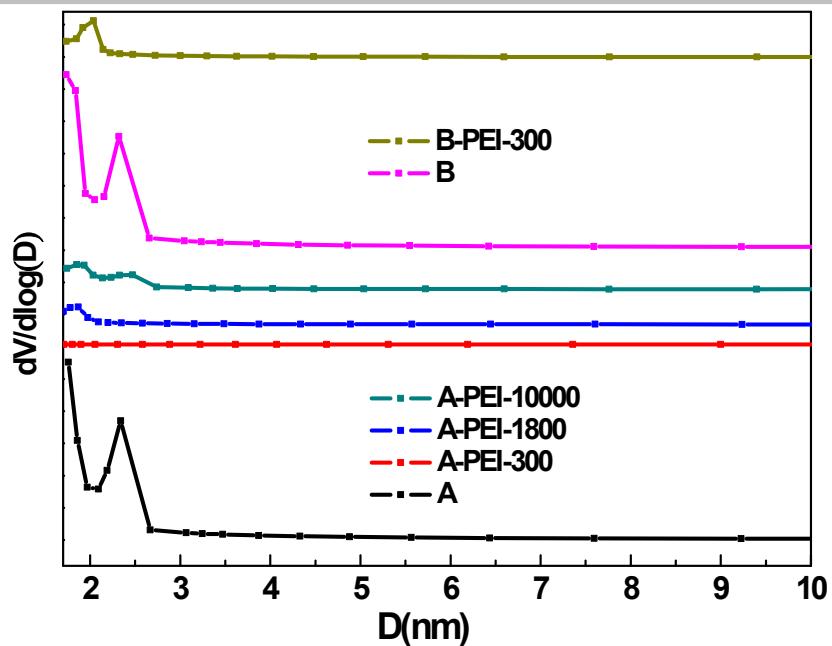

Figure S6. Pore size distribution of the samples A and B before and after loading PEI.

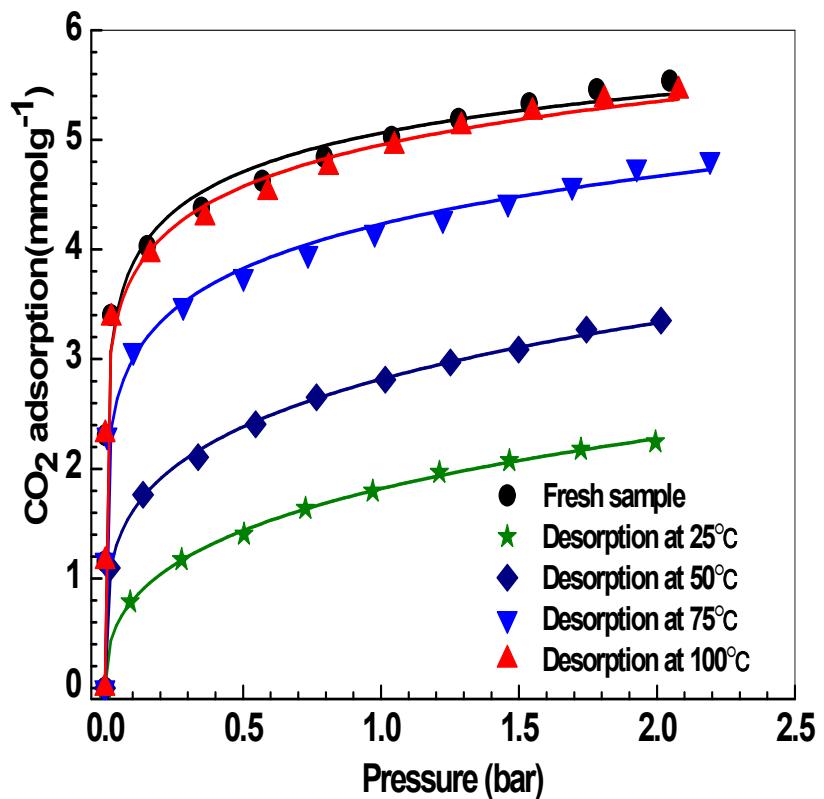

Figure S7. CO_2 adsorption isotherms for B-PEI-300 after CO_2 desorbed at different temperature under vacuum for 1 hour.

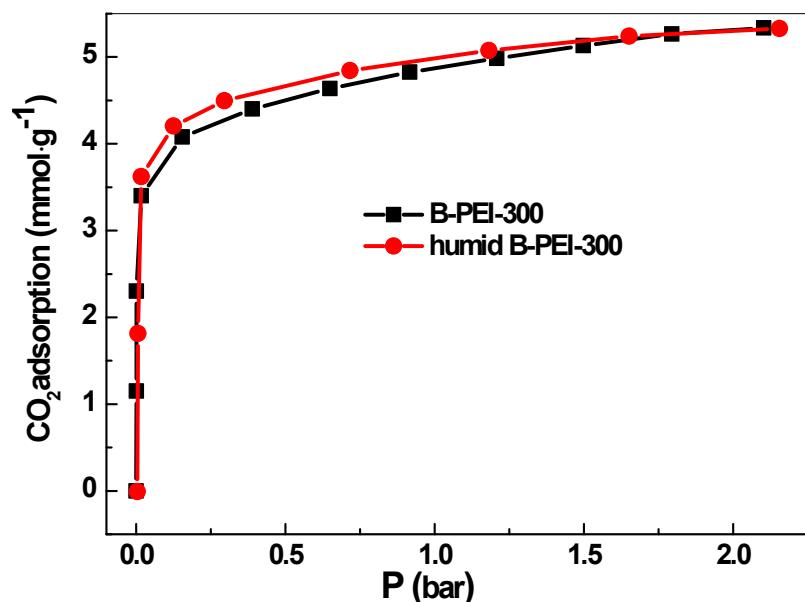

Figure S8. CO_2 adsorption properties of B-PEI-300 and B-PEI-300 exposed in the moisture for 2 hours, respectively.

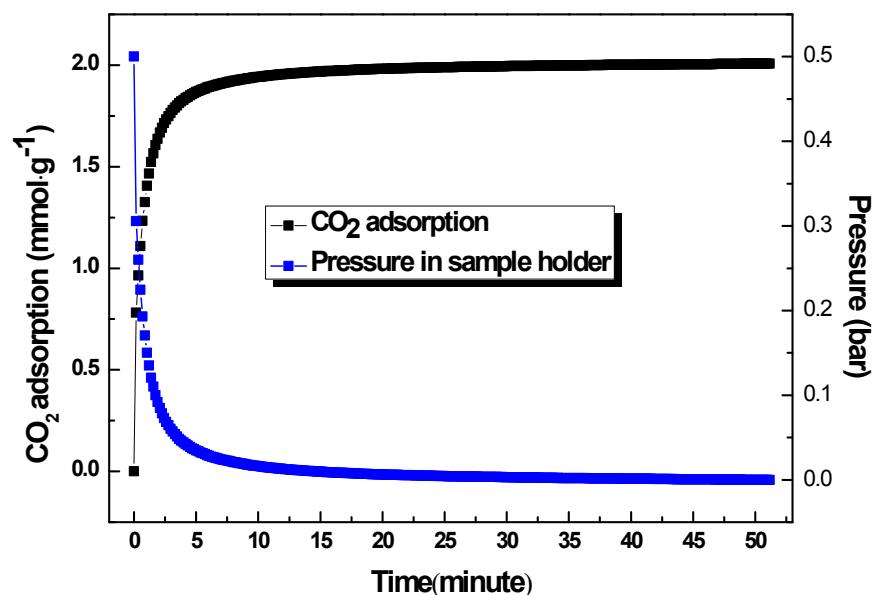

Figure S9. CO_2 adsorption kinetics of A-PEI-300 at 25 °C.

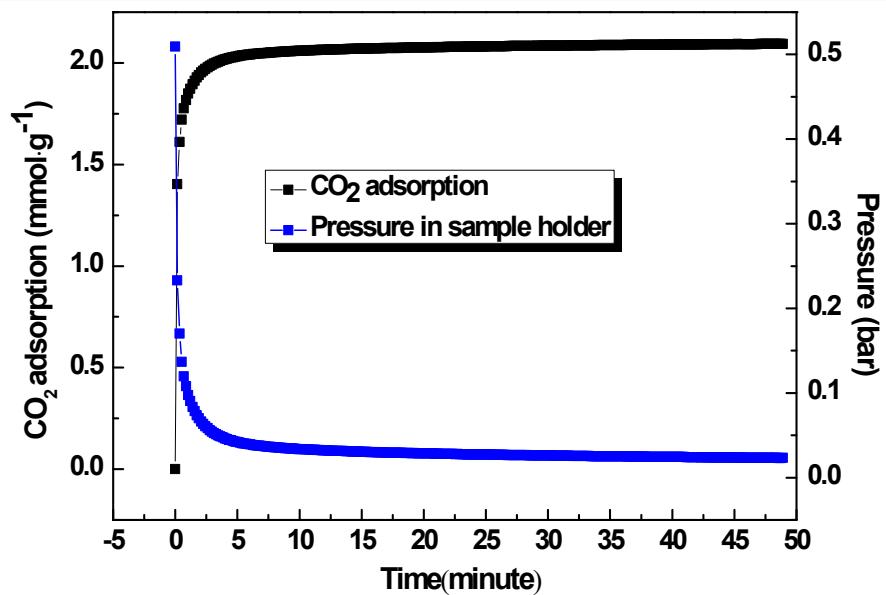

Figure S10. CO_2 adsorption kinetics of A-PEI-300 at 50°C .

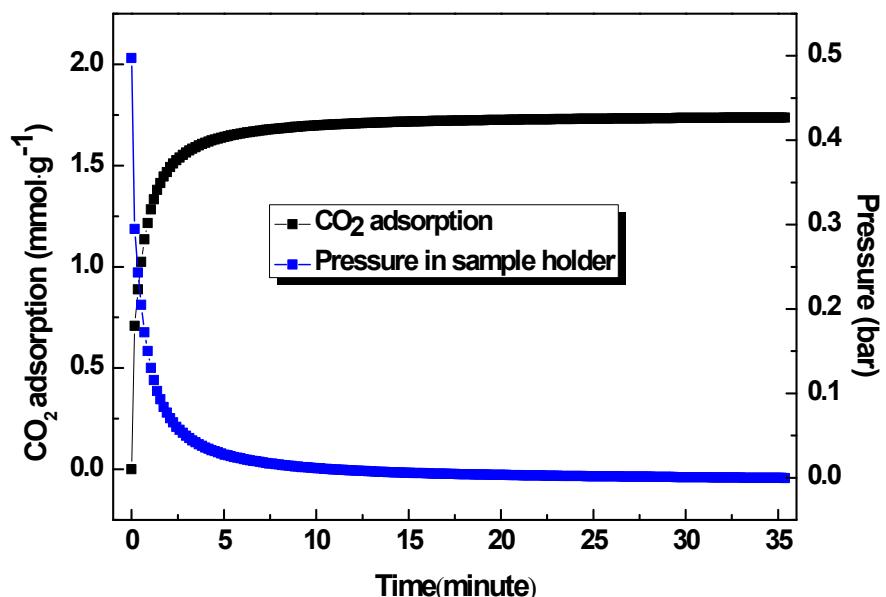

Figure S11. CO_2 adsorption kinetics of A-PEI-1800 at 25°C .

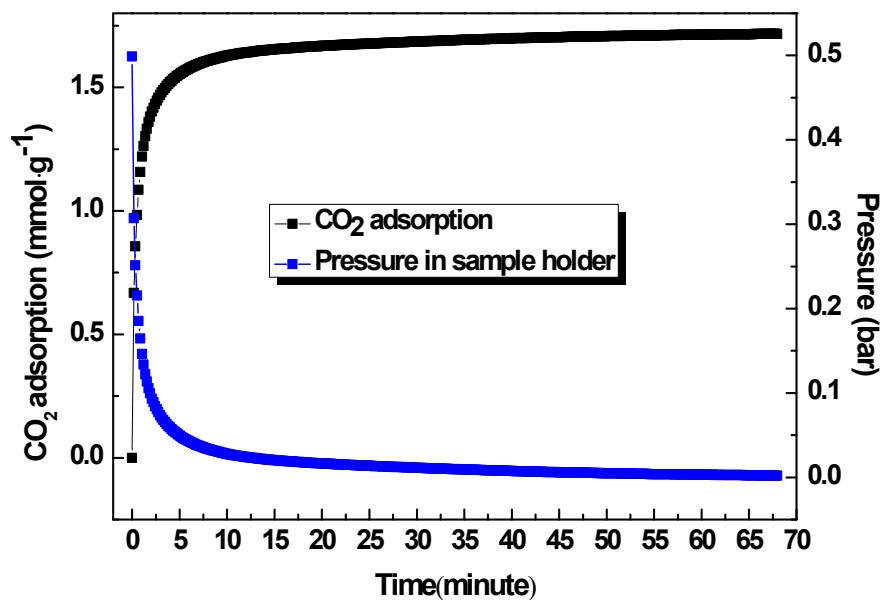

Figure S12. CO₂ adsorption kinetics of A-PEI-1800 at 50 °C.

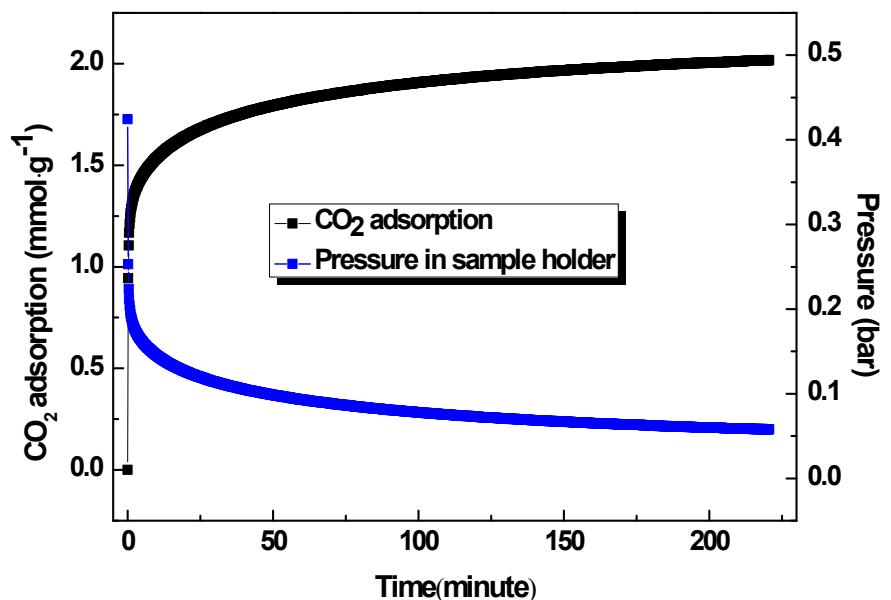

Figure S13. CO₂ adsorption kinetics of A-PEI-10000 at 25 °C.

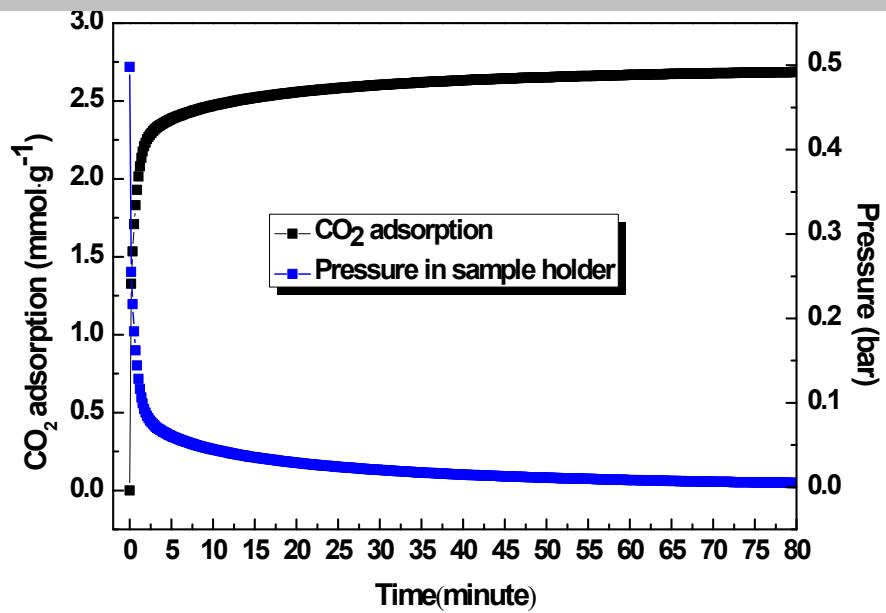

Figure S14. CO₂ adsorption kinetics of A-PEI-10000 at 50 °C.

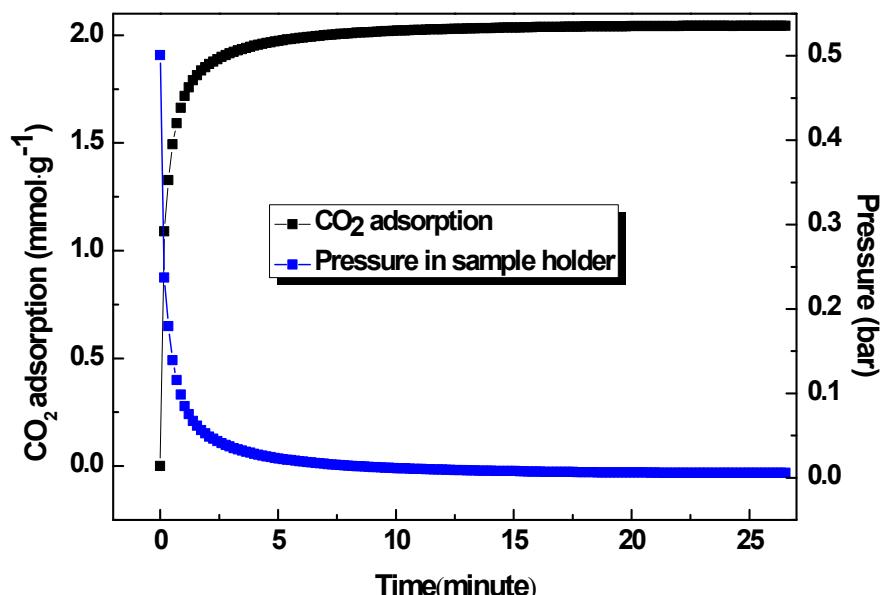

Figure S15. CO₂ adsorption kinetics of B-PEI-300 at 25 °C.

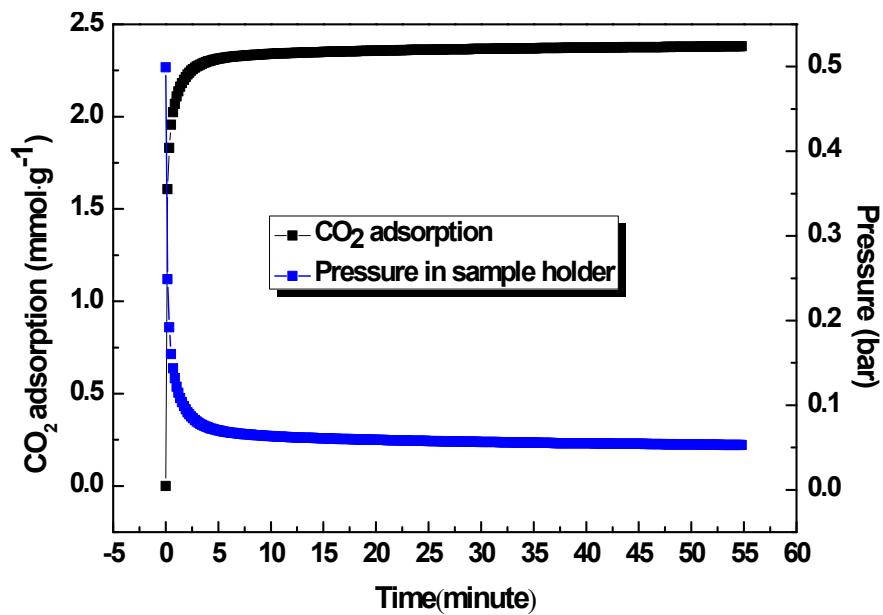

Figure S16. CO_2 adsorption kinetics of B-PEI-300 at 50 °C.

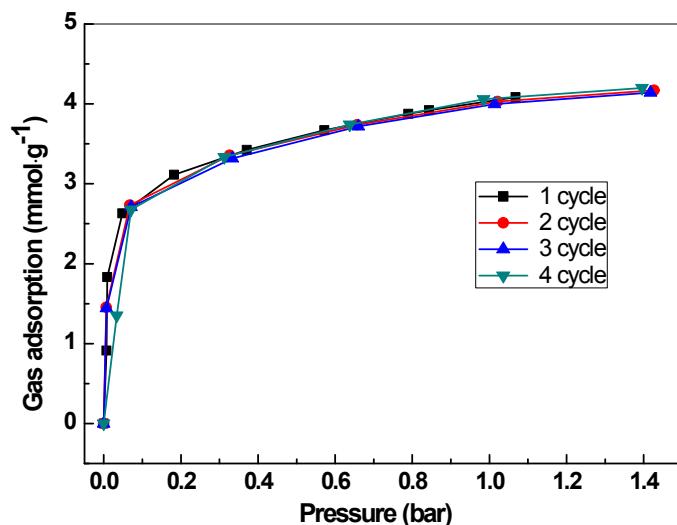

Figure S17. Cyclic measurements for A-PEI-300 at 25 °C. Between each measurement, the sample was evacuated for 2 hours at 110 °C.

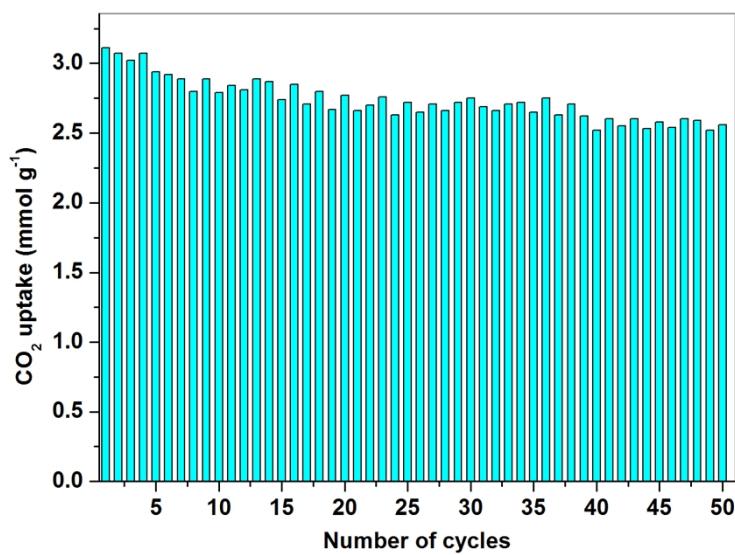

Figure S18. The cyclic CO_2 uptake of PEI-MIL-101-300 at 25°C and 0.15 bar.

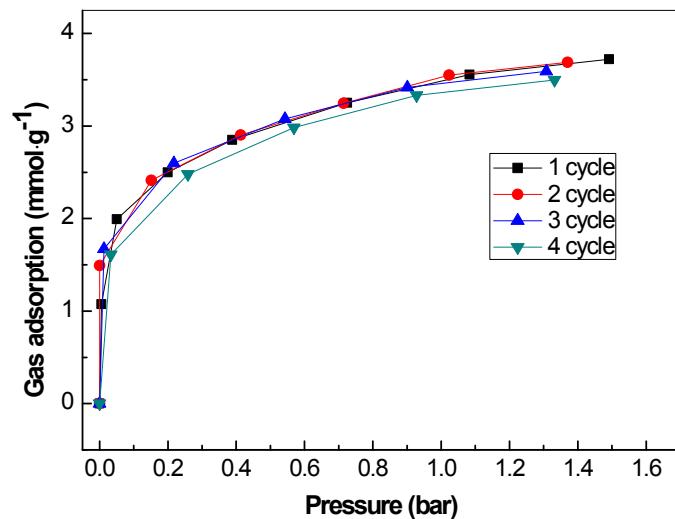

Figure S19. Cyclic measurements for A-PEI-1800 at 25°C . Between each measurement, the sample was evacuated for 2 hours at 110°C .

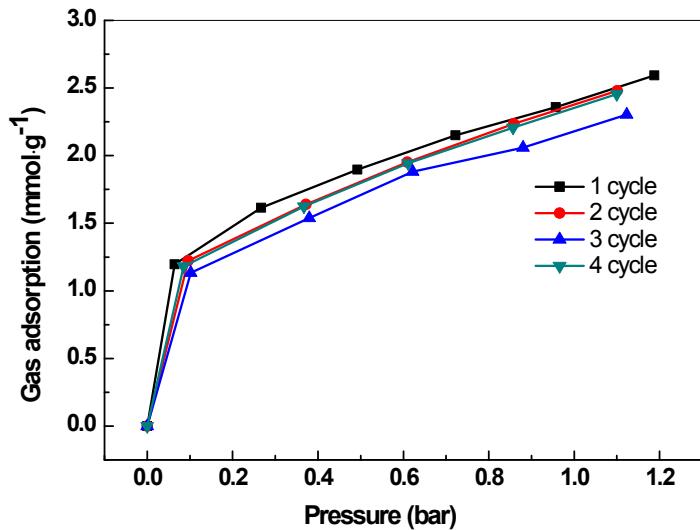

Figure S20. Cyclic measurements for A-PEI-10000 at 25 °C. Between each measurement, the sample was evacuated for 2 hours at 110 °C.

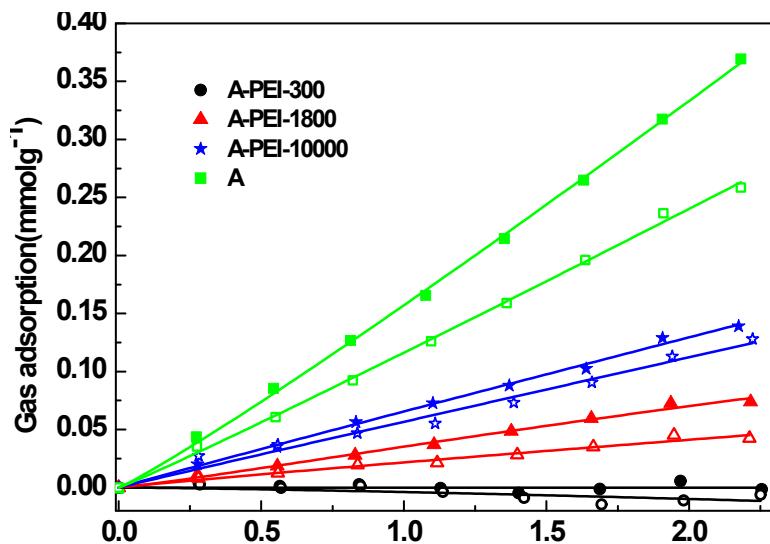

Figure S21. N₂ adsorption isotherms of the sample A before and after loading PEI. Symbols: Filled, 25 °C; Hollow, 50 °C.

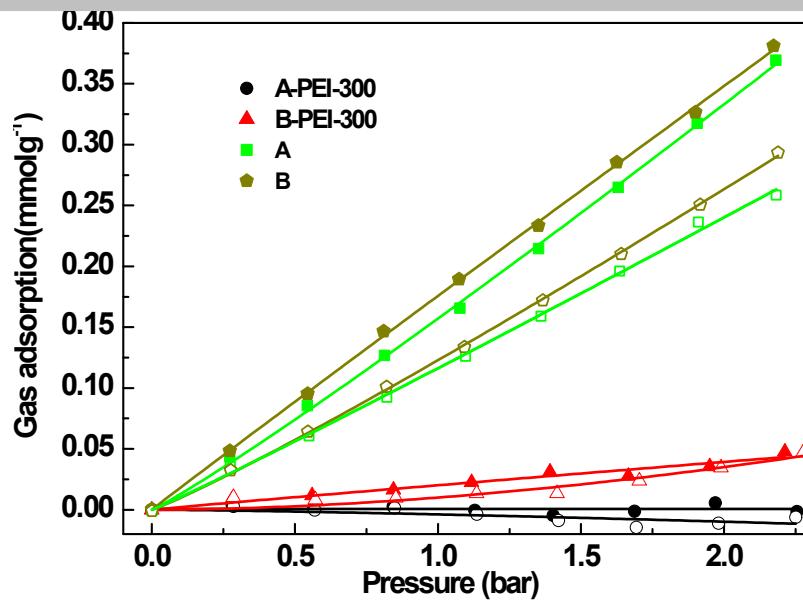

Figure S22. N₂ adsorption isotherms of the samples A and B before and after loading PEI. Symbols: Filled, 25°C; Hollow, 50°C.

Table S1 amine efficiency of PEI loaded samples

	mmol CO ₂ / mmol N at 0.15 bar	
	bar	
	25 °C	50 °C
A-PEI-300	0.77	0.52
A-PEI-1800	0.58	0.51
A-PEI-10000	0.30	0.48
B-PEI-300	0.88	0.65

Isosteric heat calculation

The isosteric heat of CO₂ adsorption values were calculated using the Clausius-Clapeyron equation:

$$\frac{d \ln P}{d(1/T)} = -\frac{Q_{st}}{R}, \quad \ln P = -\frac{Q_{st}}{R} \frac{1}{T} + \text{cons} \tan t$$

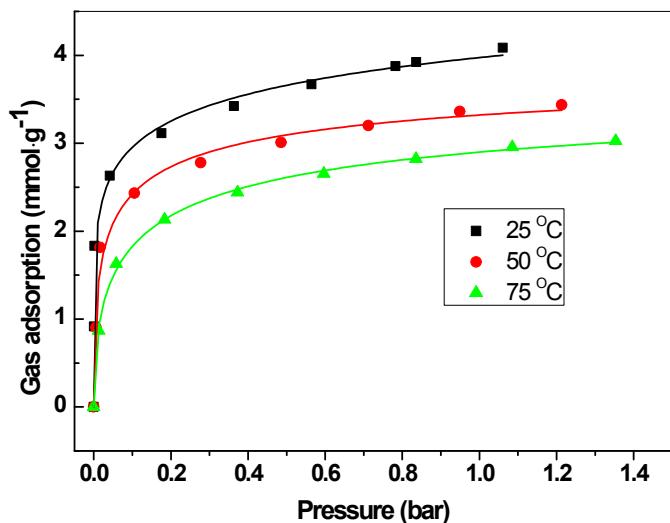

Figure S23. The CO₂ adsorption isotherms of A-PEI-300 at 25-75 °C

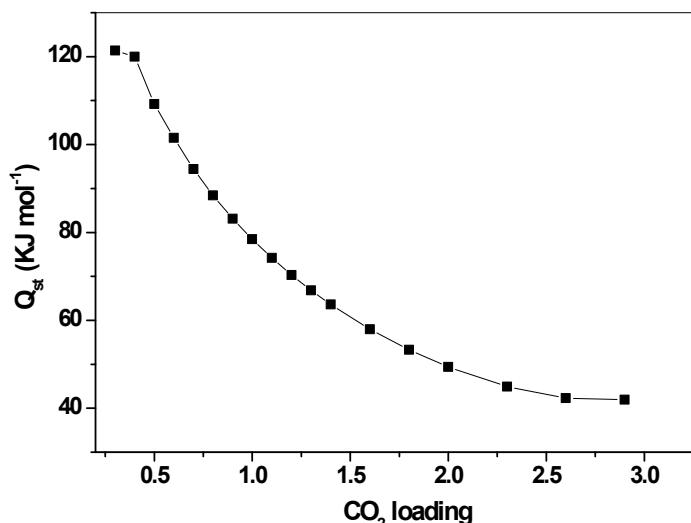

Figure S24 The isosteric heat of the CO₂ adsorption calculated from the adsorption isotherms measured from 25 °C to 75 °C using Clausius-Clapeyron equation.
