Contents:

1. DSC thermograms of polymer. Figure S1
2. Electrochemical Curve. Figure S2
3. Density functional theory (DFT) calculations. Figure S3/ Figure S4
4. Photovoltaic Properties. Table S1/ Figure S5
5. Absorption spectra of blend films Figure S6
6. XRD patterns Figure S7

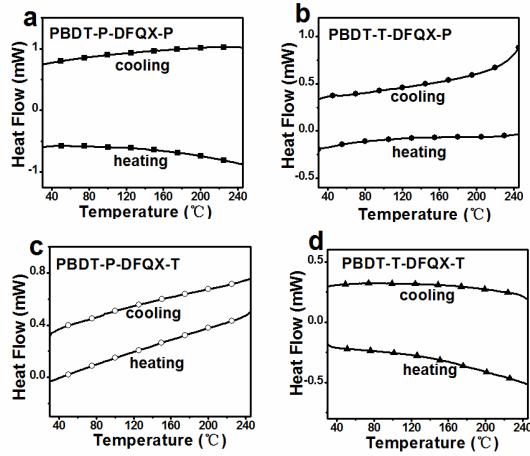

Figure S1. The differential scanning calorimetry (DSC) the thermograms of polymers under the protection of nitrogen (heating and cooling rate: 10 °C/ min)

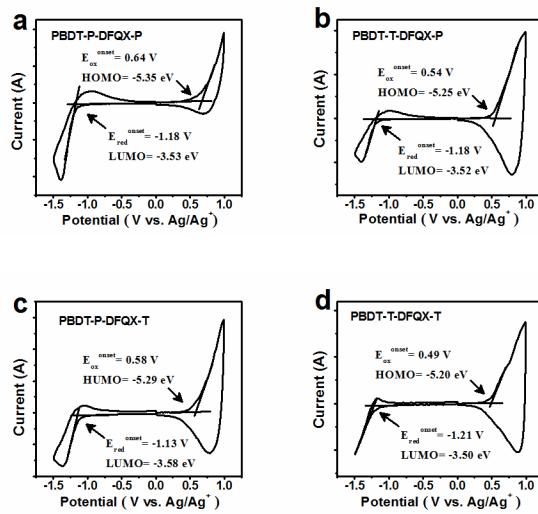

Figure S2. Thin film cyclic voltammograms of polymers in 0.1 M Bu₄NPF₆ acetonitrile solution at a scan rate of 100 mV · s⁻¹.

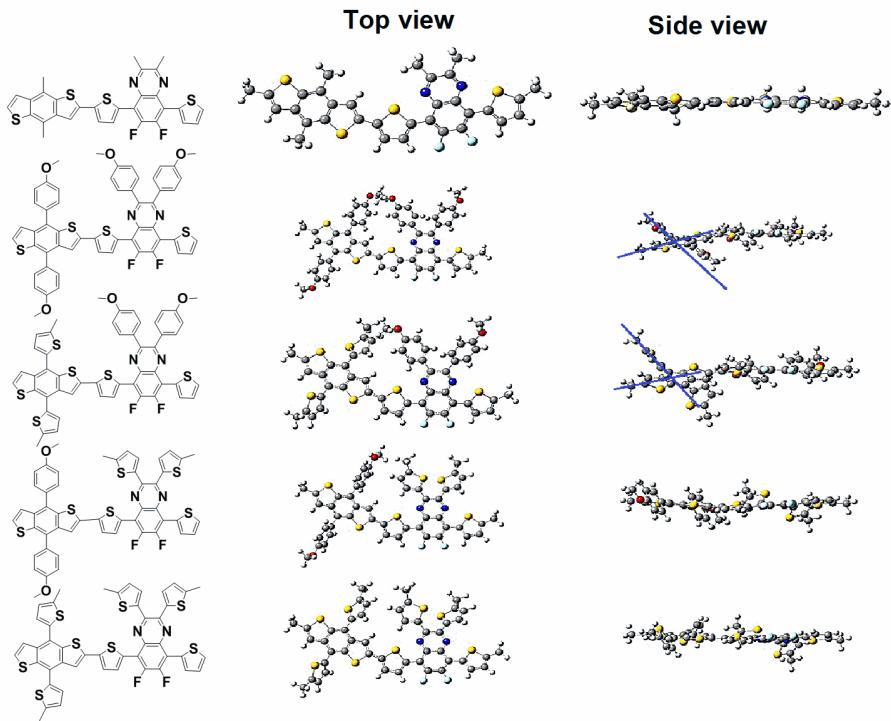

Figure S3. Top view and side view of optimized geometries of the four copolymers backbone units with a chain length $n=1$.

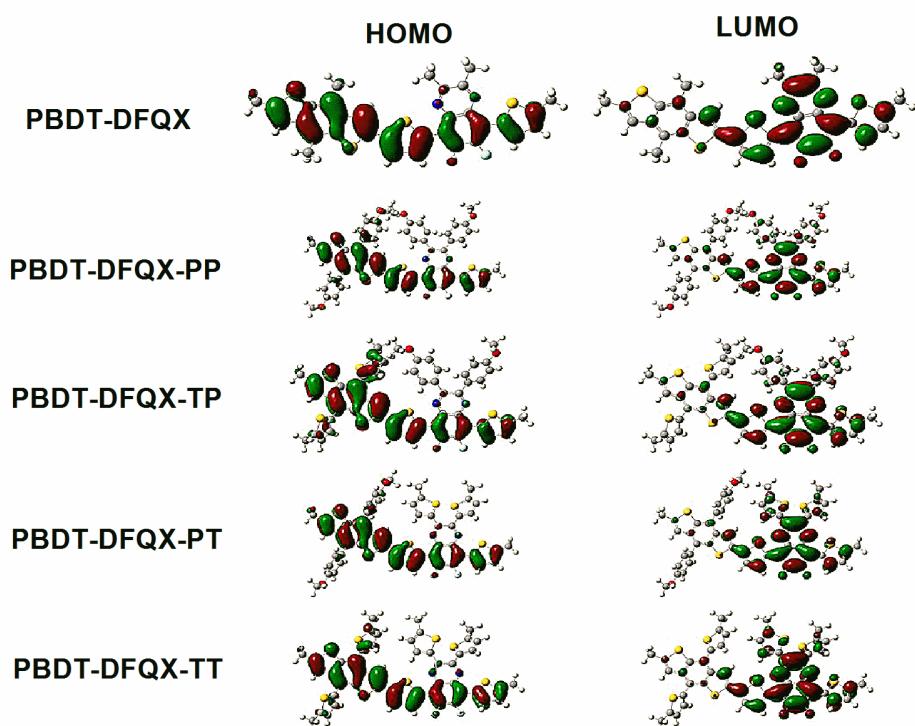

Figure S4. The frontier molecular orbital (LUMO, top; HOMO, bottom) obtained from DFT calculations on the polymers with a chain length $n=1$.

Table S1. The detailed photovoltaic data of the optimization process of the PSCs

Polymer	Ratio ^a	Treatment	V_{oc} (V)	J_{sc} (mA/cm ²)	FF (%)	PCE (%)	Thickness (nm)
