#### Table of Contents

**Fig. S1** Mapping images of elements distribution.

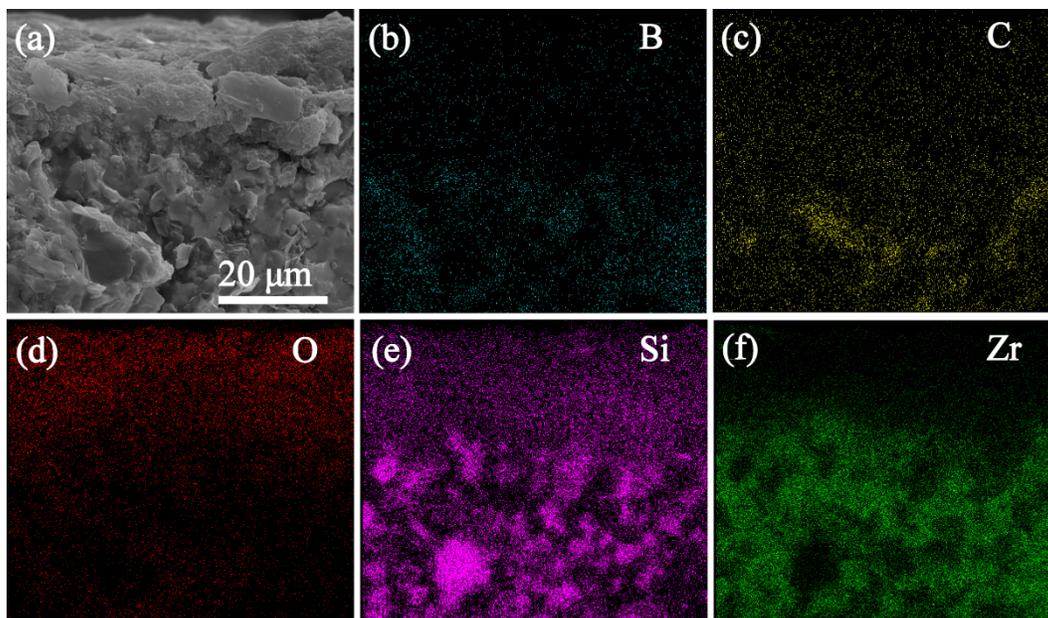

**Fig. S2** Typical top SEM images of YSZ coating.

**Fig. S3** TEM images of YSZ powders.

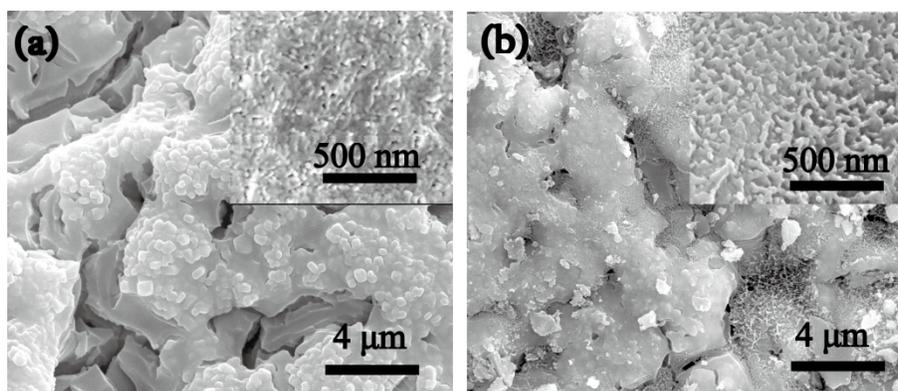

**Fig. S4** TG and DSC curves of YSZ gel.

**Fig. S5** Digital camera images of hydrophobic properties.

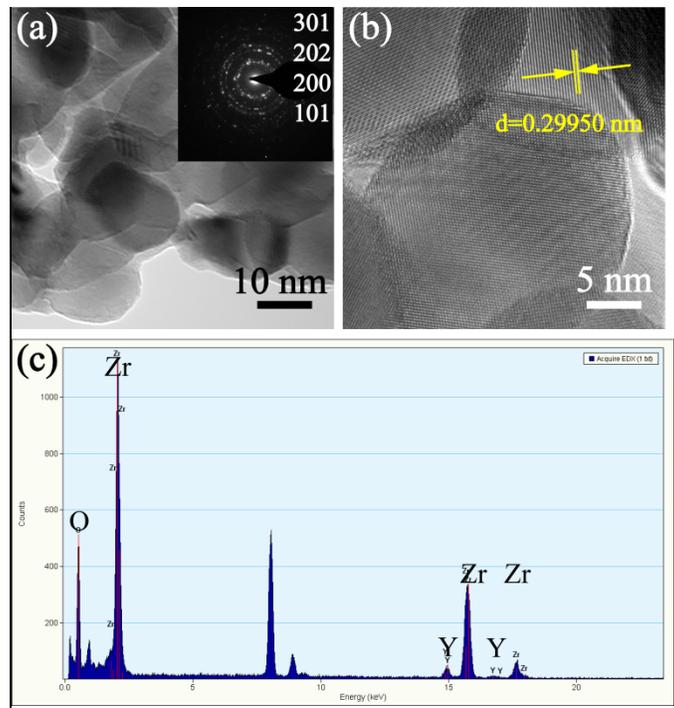

**Fig. S6** Typical optical images of prepared samples.

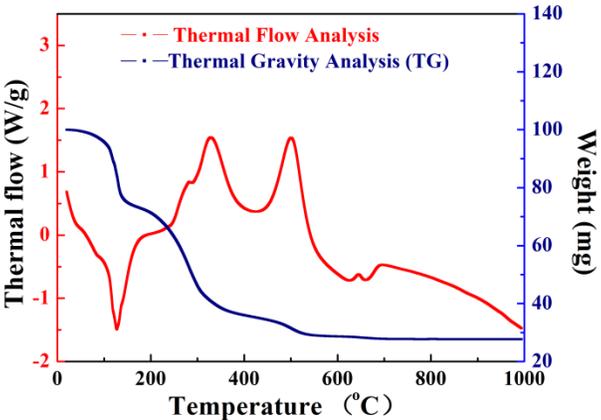

**Fig. S1** Mapping images of elements distribution. (a) A cross-sectional SEM image of specimen with coating. (b-f) The mapping images of B, C, O, Si and Zr elements for specimen with YSZ coating, respectively.

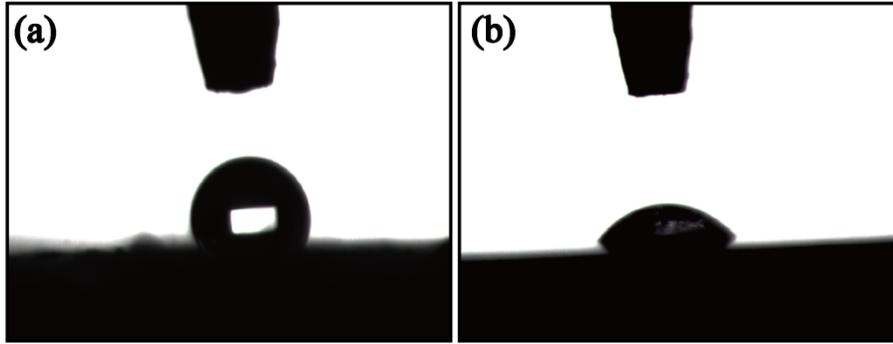

**Fig. S2** Typical top SEM images of the first (a) and second (b) round dip-coating and calcination at 600 °C, respectively.

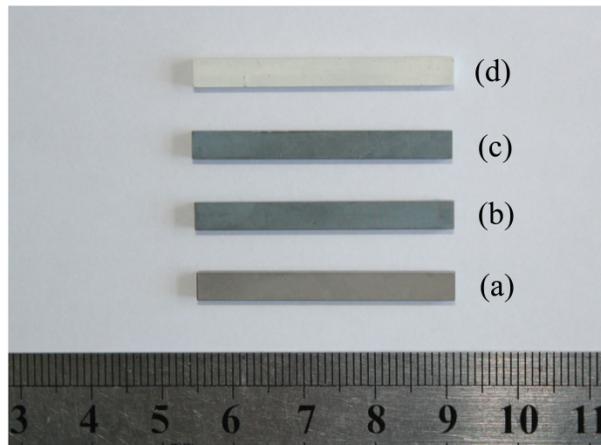

**Fig. S3** TEM images of YSZ powders. (a) The typical conventional TEM bright fields of the YSZ powders and the SAED pattern (the inset). (b) A HR-TEM image taken from the same area. (c) Energy-dispersive analysis microscope (EDAM) of YSZ coating.

**Fig. S4** TG and DSC curves of YSZ gel.

**Fig. S5** The digital camera images of deionized water drops on the samples with (a) and without nanostructures (b), respectively.

**Fig. S6** The typical optical images of  $ZrB_2$  ceramic matrix composite (a), oxidation at  $900\text{ }^\circ\text{C}$  for 1 h (b), alkali treatment with concentrated  $NH_3\cdot H_2O$  and  $H_2O_2$  at  $90\text{ }^\circ\text{C}$  for 1 h (c), the third dip-coating and calcination at  $600\text{ }^\circ\text{C}$  (d).
