## 1. Experimental

### 1.1. Materials and method:

All reagents were purchased from Sigma Aldrich and used without further purification. Acetonitrile and dichloromethane were distilled from CaH<sub>2</sub> before use. <sup>1</sup>H NMR spectra were recorded on a BRUKER-AC 200 MHz spectrometer. Chemical shifts are reported in ppm from tetramethylsilane with the solvent resonance as the internal standard (deuteriochloroform: 7.26 ppm). Data are reported as follows: chemical shifts, multiplicity (s = singlet, d = doublet, t = triplet, m = multiplet), coupling constant (Hz). <sup>13</sup>C NMR (50 MHz) spectra were recorded on a BRUKER-AC 200 MHz Spectrometer with complete proton decoupling. Chemical shifts are reported in ppm from tetramethylsilane with the solvent resonance as the internal standard (deuteriochloroform: 77.0 ppm). UV/vis absorption spectra were recorded on a Shimadzu UV-2450 UV/vis spectrophotometer, fluorescence emission spectra were recorded on a Hitachi F-7000 fluorescence spectrophotometer, FT-IR spectra were recorded on a Perkin Elmer RXI spectrometer and HRMS spectra were recorded on a JEOL-AccuTOF JMS-T100L mass spectrometer. Photolysis of the ester conjugates were carried out using 125 W medium pressure Hg lamp supplied by SAIC (India). Chromatographic purification was done with 60-120 mesh silica gel (Merck). For reaction monitoring, precoated silica gel 60 F254 TLC sheets (Merck) were used. RP-HPLC was taken using mobile phase acetonitrile, at a flow rate of 1mL / min (detection: UV 254 nm).

### 3. Fluorescence quantum yield calculation:

**Table S1 :** Quantum yield of  $C_4$ ,  $C_5$  and 4-methy-7-hydroxycoumarin <sup>1</sup>

Compounds	Quantum yields <sup>a</sup> ( $\Phi_f$ )
$C_4$	19.53%
$C_5$	24.27%
4-methy-7-hydroxycoumarin	0.0617%

<sup>a</sup> measurements were performed in absolute ethanol solvent. Fluorescence quantum yields were measured with quinine sulfate ( $\Phi_f = 0.546\%$  in ethanol) as the reference.

Determination of  $\Phi_f$

$$(\Phi_f)_C = (\Phi_f)_r * (Grad_C) * \eta^2_C / (Grad_r) * \eta^2_r$$

c stands for Compound under measurement  
r for reference
